Hi,

I've got a Atari 800XL, which I haven't used for about a year after I moved house, unfortunately when I got it going this weekend the machine started playing up. The problem (according to the memory test) is related to bad memory, with many of the memory areas not working all the time and one of the ROM chips working intermittently. However some of the time a lot of the chips do pass the memory test, it just seems to be when I load anything they fail. Often when I turn the machine on the self test has nearly all the chips working.. I've had a look inside and the chips appear to be soldered onto the motherboard, so they can't have come loose in their sockets. When the memory plays up the machine goes bananas with all sorts of nonsense appearing on the screen. Sometimes it just locks up and others the option/start switches don't work..
Also I noticed while the machine was open the plastic 'circuit' from the keyboard to the motherboard was badly discoloured between the keyboard and the connector. Could this cause the above symptoms?
So the question is what can I do about it, or failing that, if there is anyone out there in the south or south midlands of the UK who would be able to fix it (obviously would pay for it). I'd rather get it fixed than lob it as it was my first 8bit.

Thanks for any advice,

Thomas W.

You have a couple options. One option is to play the the computer through
your PC using a TV/video capture card. The other option, and the one I
use, is an external upscaler that will take your composite output (some
even do RF) and upconvert it to VGA. Most of these devices also have VGA
passthrough so you can switch between your PC and the Atari. See
http://www.avtoolbox.com/upconpage.shtml for some sample devices.

I forgot to mention as well that many Atari machines include chroma/luma
signals that will allow you to start with s-video output rather than RF or
composite. If you get an 800 or a 130XE, for example, you'll have these
signals and can buy or build yourself an s-video cable for better video
quality prior to upscaling.

See my reply to your 400/800 question for part of the answer. In addition,
since the 2600 does not inherently include a means to output anything but
RF output, you may need an intermediate step for doing that. As I
mentioned in the other post, some upscalers will handle RF, or you can use
an old VCR to do the conversion from RF to composite/s-video. There is
also a fairly simple modification you can buy for your 2600 that will give
you A/V output will little effort. Take a look at
http://www.8bitdomain.com/products.php?id=3 for details.

Thomas, I cannot give any advice about the techical problem. But about your intention to fix this specific computer because it was your first 8 bitter: I like that! I would do the same for my 600XL.

Anders

snip.
I'm not an expert, but here's what I'd do.
I'd unplug the keyboard and see if it will boot to READY.
Then, I'd get a second 800XL, (I already have several).
Then replace the Large 40 pin ICs one at a time with
known good ones, probably starting with the PIA and
POKEY, and assuming your LSIs are socketed. Also
try swapping the OS ROM, and I think there BASIC
ROM is separate.   The idea being to swap chips, one
at a time, with known good ones.
Finally, maybe, get a logic probe and have the known
working XL and the problem one just the motherboard
and try comparing logic probe results between the computers. I you find a
big difference at one of the

chips, see if you can replace that chip.
Also, start with a known good power supply, again
using a second known working XL. Probably try
checking the PS first before the other ideas.
Or, hope someone who can fix it will respond.

Hi

> I'm not an expert, but here's what I'd do.
> I'd unplug the keyboard and see if it will boot to READY.
> Then, I'd get a second 800XL, (I already have several).

Sadly I've only got one XL (and an 800 and 65XE), maybe I should invest
in another one!

> Then replace the Large 40 pin ICs one at a time with
> known good ones, probably starting with the PIA and
> POKEY, and assuming your LSIs are socketed.

As far as I can remember from my inspection of the motherboard there was
only one central socketed chip, the rest were soldered on motherboard.
My soldering skills are no way good enough to start unsoldering chips.. :(

  Also
> try swapping the OS ROM, and I think there BASIC

> ROM is separate.   The idea being to swap chips, one
> at a time, with known good ones.
> Finally, maybe, get a logic probe and have the known
> working XL and the problem one just the motherboard
> and try comparing logic probe results between the computers. I you find a
> big difference at one of the
> chips, see if you can replace that chip.

Hhhmmm my slight problem with that one is that I have absolutely no idea what a logic probe is (doh!). Is that like a voltage tester? (See why I need someone else to fix it ;))

> Also, start with a known good power supply, again
> using a second known working XL. Probably try
> checking the PS first before the other ideas.
> Or, hope someone who can fix it will respond.

I've been using my 65XE power supply for it as I haven't managed to track down the original in the stacks of boxes I've got lurking round here.. it worked with the XE last time I checked, but that might have been a while ago as well. I'll have to find the other one, didn't think of that..

The memory test problems are entirely sporadic, I managed to get it to pass all the memory test (getting the full 48 (or however many) green lights for memory and the two green for ROM). I managed a few games of Ork attack with no problems. I then reset and tried the 10 print "jimmy is a twit", 20 goto 10, run. However it locked up during typing and is back to sporadic behaviour again..

(snip other stuff)
OK, so it works sproadicly.
The power supply is easy enough to check, check it
on the 65XE. The 65XE is pretty much identical to
the 800XL, same chips, I think. Of course we're talking
UK models, which may be different from US ones.
A central socketed chip sounds quite different from
the five or six (hmm.. lemme see, Antic, GTIA, POKEY,
PIA, CPU, I think that's all) 40 pin LSIs.
So, you could use your 65XE as a comparison, if
you're willing to open up, unplug the keyboard, and
just work with the motherboards, and know which
chip is which, ... which is a problem, the CO numbers
on the chips indicate which is which.
A logic probe will tell you if the chip pin is HIGH,
LOW, or pulsing (digital).
Yes, check the PS first.

Thanks for the advice. I'm going to pick up a 2600 but not sure if
I'll get a 400 or 800. I'm just getting some of the computers from
that time, the Commodore 64, Apple II,etc. I'm going to do my best to
save space and share monitors. S-Video sounds like a great solution.

Thomas i've worked on quite a few of these and repaired many. If the self
test indicates bad ram at points you always start there. Replace them with
4164 rams and I bet you'll be good to go. In fact, if you want to send it
to me (i'm in the states) i'll repair it for you. But I strongly feel start
with the RAM and most if not all your problems may go away.

Thomas

Do any of the RAM chips feel very hot to the touch maybe? (don't burn
yourself!) They shouldn't heat up excessively during normal operation.
That's one way to check that might work easily for you. Another is to
replace them all, but on an 800XL they are probably all soldered and you
said you didn't want to start desoldering chips in another message.

Yeah, I AGREE... I would say there probably is more than just 50 in the
US/Canada! Out of the 2, though, it's HARD to say who has more active
users... BUT I think I would have to lean towards the US, though!

You DON'T see them ALL on the internet and/or the newsgroups! You WON'T
find ALL the users left on the internet, etc... and you CAN'T base it on
sales either!!!

I am SURE there are several who DON'T have access or don't want to get on
the internet or even use a PC for that matter... or even have time to, for
that matter! It's HARD to really estimate just how many are still
interested in and/or have an 8-bit laying around the house... BUT I am sure
it probably has to be more in the neighborhood of a few hundred or so...
that ARE STILL interested in it!!! There are alot of them who are not
interested anymore and are trying to sell their stuff or it's just sitting
somewhere... a closet, attic, shed or storage. There is an ABUNDANCE of
stuff to get, if you are looking for it! Ebay is a prime example of it!
Yeah, there ARE some hard-to-find items, BUT if you look long enough, you
will probably find it sooner or later! Based on Ebay and other sites or
users, I would have to say there are MORE users than you have estimated!
However, I don't think anyone can really quantify this... unless you
included it on a Census questioniare form!!! LMAO

I suspect there are more than that. There are probably 10 to 20 people lurking and just casually using them when they get the chance. The Atari scene is a victim of it's own success. With APE it's so damn easy to just download and go play with emulated drives that getting support in these forums isn't that much of an issue. I know I find it far easier to get stuff running on my Atari's than my Commodores or Apples.

The standard VCS2600 only has RF output and no other video connectors.

bye

Hi all thanks for your replies :)

I found the other power supply for my 800XL and tried that and seem to
be getting better results, the memory check has been on for about two
hours and none of the memory seems to have failed yet, so it might be
it's a power supply issue, though I've had no problems with the power
supply when I was using it on the XE. I hadn't noticed any excessive
heat coming from the machine, which seems to stay quite cool, unlike the
800! The machine still locks up when I try and load anything from tape,

though I haven't had chance to check the 1050 with it. That might be down to a datacorder issue though. The one I got with it is slowly dying, while two others I got with my 800 seem to be on the way out as well. I have been using another one, which is the XE style one, but that draws power through the SIO port so it might be causing an issue that way. I suspect my keyboard is slightly to blame in this as well as the XL is having issues with start and option being held down on boot up. So I think I need to find another datacorder, another power supply and maybe replace the keyboard (or at least the plastic circuit strip in the keyboard) and see whether the problem clears up. I think I might invest in another XL as well, just to be on the safe side ;)
Actually I was wondering what is going to happen when all the datacorders die, is there another way of getting a normal tape player to feed the Atari (I have got a SIO2PC, but never seemed to have much luck with it (it's got an old ST style serial port connector which is twice the size of the newer ones and attempts with a converter were unsuccessful)).

regards

Thomas

I think the idea is to shoot through the bricks and then shoot into the
fuzzy stuff behind the opposing gun. Left and right move you like that
though you can only stop by pulling back on the stick, which stops you
dead. You can block the enemies missiles with the beams that come out of
you when your moving left and right and also with the body of your gun
(not with the gun itself though). If you shoot the enemy in the gun or
he shoots you then they cannot fire for a bit. Hope this helps.

I've got a similar problem with my original 130XE. A few years ago I started getting problems with garbage on the screen and the memory self test consistently showed a bunch of bad RAM blocks.

Although I have a working 130XE, I'd really like to repair my original one since it was the 2nd computer I owned (the first being an 800), and it has a Ramrod board with Omnimon, Omniview, and the standard OS.

Is there any easy way to see which specific RAM chips are the problem? I might be able to replace one or two chips, but I doubt my chances are good at successfully replacing all 16 of them.... my soldering skills just aren't that good.

Thanks.

-Jason Harmon

Everyone call.
telnet://stguild-bbs.dydns.org/

I want to get a 8-bit section if I can get enought 8-bit callers. 5 Gigs of
ST files, and want to add 8-bit. Lets get it rolling.

I would be willing to repair it for you. Keep in mind the 130XE has very
weak solder pads and traces and if you aren't skilled at
soldering/desoldering you risk damaging the board.

If your 130XE has the MT type RAM chips, these are notorious for failure and
they should ALL be replaced. Shoot me an e-mail if you'd like for me to fix
this for you.

Thomas

I wish you the best. However I have seen many an Atari that will show an OK ram test for hours. But the very next time you cold boot it you may have RAM issues again. If it were a power supply issue, I would expect you to see more consistent issues and/or complete failure.

Thomas

Memory malfunctions may be a symptom rather than a cause.

I would replace any electrolytic capacitors, because these have the shortest life. They literally dry out over time. Silicon chips last far longer, especially if not used often.

> Also I noticed while the machine was open the plastic 'circuit' from the
> keyboard to the motherboard was badly discoloured between the keyboard and
> the connector. Could this cause the above symptoms?

No, it is just the printed conductors corroding, that would cause the keyboard to fail but not memory.

> So the question is what can I do about it

Stick a scope on the power rails and check they stay healthy looking.
If they have big spike on them then it may well be the electrolytic decoupling caps have gone dry.

Yep, these have a big electrolytic cap and an inefficient linear power
supply getting hot and accelerating the cap-drying out.

In an ongoing effort to reduce the mass of my possessions, I replaced my
ancient heavy 5V 1.5A Atari PSU with a modern lightweight 5A switch-mode
PSU.

> datacorder issue though. The one I got with it is slowly dying, while two
> others I got with my 800 seem to be on the way out as well.

They are mechanical and will wear out faster than other kit.

Necessity is the mother of invention, so perhaps it is nature's way of
suggesting you upgrade your machine to an IDE drive or SD card interface?

Note that Atari forgot to connect the Chroma pin until very late models.
Nobody noticed because nobody used it - S-video wasn't around then.

The pin is simple to wire up if you are confident opening your machine.

Personally I'd forget trying to drive a DVI/VGA monitor, and just buy a
cheap LCD TV with a SCART or S-video socket. These will use the right
signals for the Atari, and as a bonus you can always use it to watch TV.

Hi,
Yes this information helps a lot. Knowing about the stick being pulled back
to stop. Now I have a feeling of some control over my player now..
Thanks..
RoyE

Hi Rick,

I'm afraid the 65816 is not pin compatible with the 6502. You'll need
to build an adaptor.

Here's a page describing one:
6502.org/mini-projects/816conv/conv.html

There was a lot of talk about it a couple of years ago on
comp.sys.apple2 but I'm not sure if anybody actually built one.

This may not work all the time but it is worth a shot.
If the RAM isn't shorted and getting hot you can piggy back the new RAM
on top of the old.
Squeeze the pins to gather on the new RAM chip to form a snug fit and
with the computer off slide it over the suspected RAM making sure the
pins are aligned correctly.
Discharge your self before trying this, A static discharge can destroy
the new RAM!
I successfully diagnosed and repaired a TRS 80 video RAM problem using
this method.

Hey.

They offer some of the best premium newsgroup access anywhere.

Great prices and support await you as you travel into the beautiful world of premium nntp access.
You can find almost anything you are looking for.
They give you access to some of the best groups others may not carry.
Take a look at all the great features below and imagine! You'll LOVE it.
With some of the fastest connections around it's no wonder people love it and keep coming back.
Images, video, mp3 music, the real news from around the world... it's all inside waiting for you.
Take a look, I know you'll love it as much as I do.

Posting allowed!
800 GIGS of new multimedia content each day

Hello!
It is my pleasure to inform that the beta version of oo2c oberon-2
compiler for nmos6502 published.
This version uses cc65 as a portable asebmler
You can download it at http://sf.net/projects/nmos6502-oo2c

Please, report bugs, write me your thoughts, suggestions.

Thank you

Norayr Chilingaryan

Doesn't really work. If I'm not root when compiling (and I don't want to
be root just to compiler something) I get::

 Fatal error: Cannot open output file
 `/usr/local/nmos6502-oo2c/minilib/c64/Terminal.o': Permission denied

If I'm root then the compiler complains there is no `./Terminal.o`.

Ciao,
     Marc 'BlackJack' Rintsch

Mine is still on the desk in Sunny Australia, wrote a program to
entertain the kids just yesterday.

Any other Aussies out there? 8 bit stuff is really hard to find here,
even though they sold a lot.
I'm after a lot of old carts and bits and pieces but can't find them in
Australia :(

Thanks for the reference, I bookmarked it!

It's been 20 years since I last looked at an Atari 800 schematic, mostly just hacked on the XL series. I seem to recall that the Atari Technical Reference had the schematics for the REV A OS board. The board differed from all later Atari 8 bits in that it used the 6502B with external rather then internal circuitry to get the 6502B to work with a !HALT signal.

The !HALT signal was added because the 6502 design did not lend itself to multiprocessor designs. ANTIC being a video co processor that needed to take over the buss.

As much as I can remember, I think they may have employed a 74LS245 in a similar fashion to isolate the 6502B from the buss. If that is the case it should make it a bit easier for me to tie in the phase 2 clock. If I get really lucky, there may be enough left over logic on the board I can use to get it functional.

Rick

Just thought I would add: If the 6502C was made by Rockwell in Mexico
then that is another notorious failure mode.

I'll have to check the memory if all else fails I suppose.. It's much
safer for my XL if I don't start wielding a soldering iron next to it
just yet though! ;)
Anyone know where I can get one of those plastic strips for the keyboard
or do I need to buy the whole thing again?

Hmm - it is that cold dry-air time of the year when static discharges are
big enough to be felt by humans, not a good time to prod those fingers all
over silicon chips.

Replacing the electrolytics in the PSU is far less hazardous.

As you said yourself, the problem diminishes with a different PSU, so you
don't have to be Sherlock Holmes to deduce that suspicion lies more with the
PSU than the 800.

> Anyone know where I can get one of those plastic strips for the keyboard

If you noticed I am not using makefile yet.
That is why there are script build.sh to build and install the
compiler

> Fatal error: Cannot open output file
> `/usr/local/nmos6502-oo2c/minilib/c64/Terminal.o': Permission denied

Yes, if you want to use it as a user then you must change PREFIX
variable in the build script
> If I'm root then the compiler complains there is no `./Terminal.o`.

That is fine :)
I think it is a bug of cc65. option "-o" doesn't save Terminal.o in
the obj/$TARGET directory but instead in the directory where source
located.
That is why script moves Terminal.o and __oo2c.o files to the right
destination and then runs cc65 again.

This is the crucial point and you are exactly right. And any
transmitter working with the +/- 5..15V standard will have no
problem with it. A transmitter shouldn't make any assumptions on
how the receiver is implemented.

That's how all RS232 interfaces (should) work. Either use a
14C88 + 14C89 combination or a MAX232. The 14C89 is a perfectly fine
RS232 _receiver_ and the 14C88 a perfectly fine _transmitter_.

> back then.

You name it. Back then. Nowadays you can get a MAX232 clone like the
ST232 for approx. 1$. Even if we add the 4 caps we are still only
at ~$2 - which isn't that much considering total interface costs.

[as a side note: I know that you have to get +5V from somewhere for
1050-2-PC style interface, that's another issue]

I really don't say your interface can't work at all, hey I built one
myself and also use it quite frequently. It's just that I don't
recommend it because of it's compatibility issues (which I experienced
by myself - as I said it didn't work with any of my RS232 addon cards).

so long,

Hias

I'm leading a project to create a modern, open-source M.U.L.E. clone
that will adhere as closely as possible to the spirit and gameplay of
the original.

The most topic-specific place to discuss this would be at the World of
MULE "Future of M.U.L.E." forum:
  <http://www.worldofmule.net/tiki-view_forum.php?forumId=2>

Unfortunately most of the membership there has gone snoozing. I know
there are more M.U.L.E. fans than the activity there would indicate.
So, if you remember (or still play!) this game, and want to contribute
ideas and discussion to the new version that's coming, please sign up
and participate in the forum.

Alternatively, if you happy to be a greybeard who wouldn't touch a forum
with a ten-foot pole, I can sympathize. :) I'll be happy to
participate in discussions here on Usenet, too. But most of my
announcements and new thread-starters will probably happen over at the
forum; it's just not practical to duplicate them all.

Many thanks,
- Joe Strout

I never played MULE, even they I was an avid 8bit fanatic in my day. I
am a programmer though, so if I can find a copy I'll check it out and
see if it is something I could contribute to.

Where can I find old 8 bit games these days?

I'm in Australia so stuff rarely comes up on ebay here, and shipping
from the states is insane.

Anyone know where I can find 8 bit software? I've just purchased a
Prosystem serial doohickey to run stuff from the PC instead of my aging
pair of 810s.

Just google for them -- it only took a few minutes for me to track it
down last week, but I'm sorry to say I didn't right down the URL where I
found it. But I'm sure your google-fu is as strong as mine!

Best,
- Joe

I'm not sure a Prosystem interface will do what you want,
to run programs using the PC as a hard drive.
Are you sure you have a Prosystem cable and not
a APE/SIO2PC cable?
I'm not sure, but the Prosystem cable is for hooking
your 810 to the PC and copying copy protected games
to the PC.....?
A Prosystem cable would be for people who have a
collection of original disks and want to copy to a
*.PRO file for use with a APE cable... no?

It's a funny question. more than 9000, probably
not more than 90,000. However, there could be
more than 90,000. I have three compilations,
the CTH archive, Holmes archives and another.
If you count all the BASIC games that appeared
in magazines and from user groups, US, UK, Germany, Czech Republic, all
over, then probably approaches 50,000.
I've been around the Atari 8-bit for many years, and I'm still finding BASIC
games, pretty decent ones, that I never saw before (mostly from Europe now.)
My personal archives are on about 5 CDs, about 500 megs each, many repeats,
many in .zip files and megaimages.
If you're talking commercial games like MULE, infocom, Pacman, Missle
Command, then maybe less than 9,000, but certainly more than 900.

I've just received these Atari Games from an Atari Dealers Warehouse! I've made some adjustments. Some facts were wrong. For instance, Lords of Conflict is Lords of Conquest. Starflight is Starlight and Summer Games is for the 8 bit, not ST. And Ultima II by Sierra is sold.Titles listed below for 8 Bit & ST & available!E-Mail Atari@aracnet.com or call (503)256-9974!

Prices below are for one copy each.

8 bit titles

atari logo; atari, complete in thick silver box $20
decision in the desert; micropose $20
kennedy approach; micropose $20
napolean in russia; datasoft $20
summer games; epyx $20

st titles

auto duel; origin $50
axe of rage; epyx $20
data manager st; time works $20
design ideas; time works $20
down hill challenge; broderbund $20
fleet sreet publishing v.2.0; michtron $20
the fools errand; miles/electronic arts $20
frostbyte; starsoft $20
golden path; firebird $20
gridiron!; bethesda softworks $20
lords of conquest; electronic arts $20
manhunter 2-san francisco; sierra $30
midway battles; tdc $20
no excuses; arcana $20
olympus; olympian software $20
operation: clean streets; broderbund $20
people places & things; time works $20
phantasm; exocet $20
santa paravia and fiumaccio; starsoft $20
the sorcerer of claymorgue castle; keypunch $20
space quest-chapter I-the sarien encounter; sierra $30
starlight; tdi $20
stock market "the game"; starsoft $20
symbols & slogans; time works $20

The Atari 8 bits definitely need a GameBase project too.

I am proud to announce that I have managed to prepare patched oo2c/
libraries to work with cc65 c compiler for 6502.

That means, now it is possible to write and crosscompile Oberon-2
sources for Oric, Apple, and other 6502 platforms
Work will be published soon, but there is still some work to prepare
reasonable standard library

limitations: cc65 doesn't support float, i. e. no Oberon REAL,
LONGREAL support.
no garbage collection

if anyone wish to help with writing libraries(using c, cc65 in-line
assembly, and Oberon) please, feel free to write me

I want to say that it is a real pleasure to write object oriented code
for my favourite little Atmos :)
regards

Norayr Chilingaryan

I have an 800 with the older version of the OS board. The older version has the necessary chips to use a standard 6502B and functions just fine with the 65C02.

People that have been around here a while have heard me whine about the lack of a 65802. Tried for years to find one w/o any luck.

Not sure why but it never occurred to me that the 65C816 comes in a 40 pin DIP. I'm cruizing eBay for one reason or another so I look for 65C816 and a couple pop up. Opening bid is 99¢ but $10 shipping and handling! Ouch! I put in a hefty bid anyway and am awaiting the end of the auction.

I figure since I know the 65C02 works and have been told the 65802 would work if I can buy one, the 65C816 should work as long as I don't do anything with the extending addressing modes. I've wanted a 65C816 for a couple of decades now, looks like I finally get one.

I cruize over to the WDC web site and sure enough, not only are they still being made but the price is only $9.06! I bid on the eBay one because I thought they had discontinued the 40 pin DIP! I seem to recall last time I checked they wanted a fair but price for a single quantities. Something lost in the ozone of s senior momment like the only way to get single quanties was to buy a ~$75 developer kit that came with a single processor.

All comes to he who waits.

Rick

<APPLAUDS!>

I know the joy of finding a quest item. Only problem with finding the quest item is that it ends the quest. :/ But again.. :D

according to http://ooc.sourceforge.net/,

Oberon-2 is a programming language. What computers
was it available for?

oo2C is an Oberon2 (oo) language to C (2c) language
converter..

it converts Oberon2 to cc65 compatible C code..

What are the advantages of the language?

> was it available for?
It was originally written for Ceres workstations at ETH to develop an
operating system.
That was a microkernel os with many advanced features like garbage
collection and dynamic module loading.
Original os and compiler had approx 200 kb in size. Compiler
recompiled itself in approx 25 seconds on a 20 mhz cpu.
More information you could find at http://www.oberon.ethz.ch
> oo2C is an Oberon2 (oo) language to C (2c) language
> converter..
No, to be precise, oo2c is an Oberon-2 compiler. Its frontend
generates abstract syntax tree.
oo2c developers decided instead of writing backends for many different
cpu's and architectures write one backend, which translates
intermediate representation into not readable, highly optimized c
code.
Thus c is used as a kind of portable assembler.
That is why If you look at the c code it generates, you will find it
very similar to assembly language.

> it converts Oberon2 to cc65 compatible C code..
See above, not converts, but generates from an intermediate
representation. The work have been done to adapt it to 8 bit cpu's
and to compile minilib (originally designed by Stewar Greenhill for
avr microcontrollers) with cc65, instead of gcc.

It was not easy task :) gcc and cc65 is very different.
> What are the advantages of the language?
Oberon is a successor of Pascal and Modula-2, it is much simpler, but
more powerful.
Language is object oriented, strong typed, modular with
_type_checking_across_module_boundaries_
garbage collection yet not supported in 6502 version

Is it reasonably easy to compensate for the lack of garbage collection
by following a certain programming style? Or how do you manage it.

Anders

I don't know why, but when I try to download from Internet (in this case
Atarimania.com) the winzip program opens the file, not asking if I want to
save it or open it. It did this before, but I recently installed a new
version of Winzip (11 I think). Anybody know if there's an option to turn
this on or off?

Thanks and take Atarian care

Don't know which version Windows you got.
But you, at some point, have answered "Yes" to
Winzip's question "Do you want to make Winzip the
default for this file type?"
You've established Winzip as the 'opener' for .zip
files.
You need (in Win98SE) to 'My Computer', then
in the 'Files' tab on top, select 'File Types', then
open that and find .zip files and Remove that file type
from the list.
Next time WinZip asks if you want to make it default,
say 'No' and even click a 'don't ask again' if there is
that box.
File associations work similarly in XP.

Then again, WinZip probably has a 'configure' option,
and that may have a 'automatically open archives' or
some like, as well as file extensions to associate with
WinZip. I use PowerArchiver and it has that.

Third idea.
Winzip maybe isn't extracting the files from the .zip,
just showing the files, and you have to tell it to
extract and where separately.

Greetings everyone!

Here are the lucky and the proud winner(s) of the January prize(s) at The
DarkForce! BBS:

January 2007
1. ST Magazine - Teklord wins the free 3 mag. subscription

2. Mega STe motherboard- Guitarman61 wins it!

Congratulations to our winner(s)!

Also, here is Februarys prize:

February 2007
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

2. We just had the SuperBowl here in the US, so lets play football!
   AFL Football that is! The winner of AFL Football this month will
   pocket a $25.00 cash prize. (please read the docs fully, you must
   play to win).

Congratulations to our winners, and good luck to this months callers!

 :)

That is what it does. Not saving, but opening the zip file. Didn't do that
before and I have always answered yes to make it default for those type of
files. I think this must have been happening in version 11. Didn't do it in
8. I use W2K and XP by the way, boots default to W2K, but installed XP
because of some programs that only run on XP.

Thanks for the ideas and tips though!

What browser are you using? I know this an option in
firefox, and I'm reasonably certain this also an option
in IE 6 & 7. You'll have to poke around the options for

either, because WinZip is getting invoked by the browser.

Thanks! I am using IE6 by the way. But it never did this before and I
recently installed Winzip 11, so I figured that was the reason!

Oh, you're most welcome!

I would check both. I've stuck with Winzip 8,
as I've enver had problems w/ it and don't
need to create archives that much; when I do,
I make gzipped tar archives on Cygwin or
Linux, as the system/boot partition dictates :^)

So, you may want to check both the WinZip
and IE6 preferences.

TTFN,
  Tarkin

It isn't a problem with OS itself but the actual construction of the
OS/personality board. The early revision boards just used a standard
6502B chip with ~2 support chips to allow ANTIC to interrupt/DMA<or
something>. The functionality in those chips was later added to the
6502C which is why we are incompatible with stock 6502's.

I am really a rank newb when it comes to the 65816. I figure I will

start off just seeing if it works and if it does, rewrite some of the
Action! PD runtime library. In my tests on the 65C02 I got ~5% smaller
code and 5-7% faster execution. I think the '816 has a slightly richer
instruction set in 6502 mode so it should do even better.

And *IF* it does not crash in 65816 mode, they have instructions like
block move that should be hugely faster then 6502 move loops.

Rick

Rick, Larry:

I have some experience with the 65816 running in an Atari (my memory-upgraded but otherwise stock 800XL). It was the FTe '816 module, which dropped directly into the 6502 socket, and worked quite well (it was more than merely plugging a 65816 into a 6502 socket). I used John Harris' excellent macro assembler editor package (name escapes me) and the book "Programming the 65816".

I did manage to create a version of my APACVIEW GIF decoding program for the '816. Here's what I remember:

- The chip powers up in 8-bit mode, and all your old programs work just fine in that mode. They will not run any faster.
- You switch the '816 in and out of 16-bit mode programmatically. Your O/S will probably crash the first time you do this, as no provision for 16-bit interrupt servicing existed in the O/S ROM. So you have to disable _all_ interrupts. Curiously, normal display operation is possible without VBI (but no funny DLI-based display modes will work).
- I only got a 15% improvement in coding a GIF decoder over my 8-bit version. I turned off interrupts, switched to 16-bit mode, and decoded the entire image, then switched back to 8-bit and enabled interrupts. Not enough of my routines needed 16-bit access capability, apparently.
- Once you're in 16-bit mode, all writes and reads are in 16-bit mode. I don't remember getting around this for times I only needed 8-bit writes/reads.
- The '816 instruction set is not much richer, in my memory, other than having the ability to write/read in 16-bit words (I never used the block move instructions). They did lock out certain "trick" 6502 modes that were oversights in the original design (but exploited by some programmers). The '816 does fix the 6502's errors w.r.t. running in BCD mode, then getting interrupted and losing the status of the BCD mode bit (my memory is fuzzy here).

Don't ask me to send you my 800XL, I'd given it away years ago...

Your eight-bit friend,

Jeff Potter

certainly, if you do not use NEW then not necessarily to use DISPOSE
or rely on garbage collection

Hi folks,

does anybody here know the pinout of the ProSystem interface cable that
allows users to connect an Atari style disk drive to PC hardware?

I had the impression that this is just a standard 12V-RS232 to 5V SIO
level converter that maps the DTR line on the RS232 side to the command
line on the Atari side, but I've a user here that doesn't seem to be
able to use it with my software (atari++). As I don't have this
interface, probably someone's able to give me a clue.

I'm using the following to set the command line on the ProSystem cable:

RTS is always enabled, and DTR just mirrors the state of the command
line. If DTR is active, then the command line is "pulled", i.e. devices
are expected to receive a command frame.

So long,
     Thomas

Hi Rick and Jeff-

Thanks for the info. I was mainly curious about the 800 OS board,
although I don't use one anymore.
I'm mainly a fan of XE's, and there are three different accelerators
in the works for the XL and XE. Of the three, two use 65C816's.
Surely one will pan out!
I still have my 65816 "Bible," patiently waiting...

-Larry

You can get the original description from the APE for DOS docs which

is available from the atarimax website (the pro118.doc file inside
the ape118d.zip).

Basically it works like this: RTS is used as a power supply for the
circuit (RTS is set to logical false, the RTS line on the PC then is
at +9-12V, a zener-diode is used to convert that into +5V). +5V is
also connected to the SIO +5V/ready pin, otherwise disk drives won't
accept commands from the SIO bus.

RxD, TxD and DTR run through the 14C89 and connect to RxD, TxD and
Command of the SIO bus.

The really bad thing about the ProSystem interface is that it doesn't
conform to the RS232 standard and therefore isn't compatible with all
RS232 interfaces. Just consider it as a really ugly hack.

The interface itself doesn't provide negative voltages to the RxD input
of the PC and therefore relies on the fact that the interface interprets
the (illegal) input of 0V as logical true (the 14C89 is a RS232->TTL
converter, not a TTL->RS232!).

Basically, all onboard PC serial ports work with this hack, but none
of my RS232 addon boards (ISA and PCI) worked. The RS232 spec clearly
mentions that voltages between -3V and +3V are unspecified, you need
at least -3V for logical true (usually -12..-9V).

HTH,

Hias

Here we go again. Have you ever read the actual RS232 standard or are
you just repeating something you heard? I don't mean some faux engineers
web page or newsgroup post, but the actual technical specifications? I
can say with 100% conficence you are wrong in your assumptions.

Sorry, I don't have access to the original EIA/TIA-232-x specifications.
But the +/- 3V gap is also mentioned in the ITU-T V.28
specification plus almost every appnote you can find on the net.

V.28 spec : http://www.itu.int/rec/T-REC-V.28/en
Dallas/Maxim appnote : http://pdfserv.maxim-ic.com/en/an/AN83.pdf

If I really shoud be mistaken, please point me to the right direction.

so long,

Hias

The net references, and I have seen dozens, are all wrong on several
levels, mostly by ommision. The full spec calls for the +/- 3V *AND*
recognizing 300 Ohms to ground, => 0 volts, as a logic 1. To not
recognize it would to not be in compliance with the FULL specification.

I believe you can find some good details in

Microprocessor Applications Manual ISBN 0-07-043527-8 copyright 1975

Further, been a while since I read it, I think this is the reference
where the designers of the 6800 and 1489 talk about deciding to use ttl
levels for the switching point of the 1489 just so people *COULD* use
ttl level logic to interface with it. Kind of statement like 'since
range -/+ 3V is undefined and we want to make the 300 Ohm to ground
work, this is what we did" in the text. It is designed to switch at ~.8
volts rather then -3V. This is the chip used in the IBMs and in fact is
the designers made it to work with ttl levels. They don't suggest it,
they don't hint it, they explicitly say that is what they did to make it
fit the specifications and be easy to use.

Even the Radio Shack Semiconductor Reference Guide has the full specs in
it. I have it open to the page in my 1985 edition right now. I seem to
recall they included the specs with the little reference sheet when you
bought the chip too but I haven't bought one from them in a decade so it
may have changed. In any case they included an equivalent circuit in
both docs that show the input is protected by a diode. Anything you put
on the input below the forward voltage of the diode ~.6 volts, will not
be seen by the rest of the chip anyway.
>

> Dallas/Maxim appnote : http://pdfserv.maxim-ic.com/en/an/AN83.pdf

They have it via Clause 7 of the docs. Option to interpret as fault or
logic 1 and is universally interpreted as a logic 1 by everything I have
seen. It is stated much clearer in the Motorola docs.

First of all, really thanks a lot for your verbose explanation!

But, currently, I can't agree 100% with you. I know about the most
common receiver implementations (most have a threshold at about
+0.8..+1.6V) but this hasn't to do too much with the standard.

The V.28 spec mentions that the sender (generator) "shall" output at most
-5V (-15..-5V) or at least +5V (+5V..+15V). The ProSystem interface
doesn't meet this spec (clause 4).

Next thing, the clause 7 is about fault conditions and also says that
a receiver "may" interpret an undefined signal level as logical high.

This all together lead me to the conclusion that the ProSystem cable is
more a (bad) hack then a well-designed circuit. Just consider using
such a device (which will output slightly above 0V and slightly below
+5V) together with a 1-2m cable. It's far from fault-tolerant, even

if the receiver threshold is somewhere between +0.5 and +1.6V).

Please don't get me wrong. I've experienced a lot of problems with
those (14C89) ProSystem cables with add-on RS232 cards and I'd really
like to know what's the exact cause. My first thought was "they don't
even output +/-3V, I guess that's the reason".

BTW: All of those cards worked fine with a MAX232(A) interface.

But maybe it's really something else that hasn't to do with signal
levels, eg the 14C89 drawing too much current from the RTS line
(which, then, would also be a violation of the specs...).

so long,

Hias

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE Game System. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

    Former (before 1987) Usenet newsgroups for Atari computer discussion:
      net.micro.atari8 - created Feb 1986
      net.micro.atari - created Nov 1982
      net.micro   - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board (B8MB): http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce
  Atari related hard/software announcements. (Moderated).
  An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
  http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

  comp.sys.atari.programmer
  Programming on the Atari computer.

Ok, thanks, that's what I'm doing: Putting a LOW on the RTS (so a +12V
on the actual RS232 lines) and CMD on DTR. So either we have an
incompatible serial port that is picky about the specs, or a timing
problem concerning the serial interface. The system were this doesn't
seem to work runs winXP, I've tested the timing with a null-modem cable
and your Atari SIO server (thanks!) on Linux and Win2000, so I *would*
believe the timing is fine as it is. Of course, on a heavily loaded
system and a program running only in user space, all bets are off. (On
Linux, we have your AtariSIO kernel driver, but not on WinXP.)

Hmm. The typical 1488/1489 RS232 interface chips accept this as "true"
according to the specs I have. Whether this is conforming to RS232 I
don't know.

It will. You need to replace the OS in order to use the 16-bit mode
with interrupts enabled. I'd recommend to use my 65C816 version of the
XL OS downloadable here: http://drac030.krap.pl/en-pliki.php

> > they have instructions like
> > block move that should be hugely faster then 6502 move loops.

The move block instruction, although it is really much faster than a
simple loop, it not so fast as it coul be. It transfers one byte per 7
clock cycles.

> I used John
> Harris' excellent macro assembler editor package (name escapes me)

It is MAE. Excellent assembler indeed, although versions later than
1.1 tend to be buggy.

> - I only got a 15% improvement in coding a GIF decoder over my 8-bit
> version.

Depending on the task to do, using the 16-bit instruction you can gain
up to 30% at the same clock speed, compared to standard 6502. Surely

this is a maximum - there are tasks where you can get less, or even
none.

>From my experience, 65C816 requires slightly different programming
techniques than 6502, and it is quite difficult sometimes for an
experienced 6502 coder to change the mind and learn/invent new tricks,
or at least avoid applying "old" methods when writing programs.

> - Once you're in 16-bit mode, all writes and reads are in 16-bit mode.

Not true. Once you're in the native 65C816 mode, you *can* use 16-bit
reads and writes, but you're not obliged to do that.

> - The '816 instruction set is not much richer, in my memory, other than
> having the ability to write/read in 16-bit words (I never used the block
> move instructions).

The instruction set is mostly enriched by new addressing modes (there
is 22 of them).

Thanks for the link! Unfortunately the computer I have that should be
65816 compatible is an 800 so I don't think an XL OS will work. I will
take a look at your OS as it will help me figure out how to rewrite the
800 OS.

I don't know if you are familiar with the Action! language or its run
time, but it would be fairly easy for me to disable interrupts on entry
to any routine using 65816 instructions.

There were so many things that just needed a small speed up to be
practical, it would probably be enough. Screen scrolling with terminal
and word processor programs, serial communications, and animations to
name a few.

I'm not going to tackle an OS rewrite, but even old programs like
miniterm were written in BASIC and could barely keep up at 300 BAUD. I
remember just changing my OS to fast floating point routines was enough
to make make miniterm work reliably.

Point being that IBM may and does. That is the RS232 implementation
follows clause 7 by design and is stated as such.

Logical construct thing. You may go to the store and buy a liter of

milk. If you go to the store and buy a liter of milk, then it becomes a fact.

If someone uses the cable on equipment where clause 7 isn't implemented, then right. i.e. No one went to the store so there isn't a liter of milk in the fridge.

I can't remember his name, ~JT131 from Poland I think, sold SIO2PC interface cables on eBay. I don't have a break down of his sales but I seem to recall he had something like 2,700 positive feedbacks. I think he may have had one negative feedback but its been a long time since I looked. Like I said, I don't have the details but it does look like his cables worked for 99.96% of the IBM compatibles and possibly 100% since you are bound to get a complainer in 2,700 sales. These were SIO2PC cables but they still do the ~.6 volt as logic 1 and ~2.4 to 5 volt as logic 0.

> BTW: All of those cards worked fine with a MAX232(A) interface.
>
> But maybe it's really something else that hasn't to do with signal

> (which, then, would also be a violation of the specs...).

I am mostly mentally stable with the exception of the occasional fits of obsession.

Specifically ~CMOS switches to become a low value resistor of a few Ohms as compared to silicon which is mostly current source or sink with a forward voltage drop.

A few years back after one of these RS232 debates/Pro cables don't work, I rewired one of my socketted 14C89 SIO2PC cables into a Pro cable. The cable worked fine of course but since Steve specifies the 14C89 I decided to plug in a plain old 1489: It worked too although chip voltage levels and positive output voltage was down to ~2.4 volts. I test everything to the detriment of my free time.<grin>

Actually that was the last time I had an Atari plugged in.

Rick

Surely it won't - it needs the 16k ROM space available in XL/XE
machines.

Way cool. I've been using Oberon for a while, have tried oo2c a few years
ago (without patching it) and thought again about it last week when
reading "The School of Niklaus Wirth: The Art of Simplicity". Now it is
done, thank you very much!

Carsten

Hi,
I recently found this game at
http://atari.fandal.cz/detail.php?files_id=3433 and was wondering if there
is any documentation for playing this game and what kind of input[joystick
or paddle] is needed. Nice graphics and I got a score and level 2, but I
don't seem to have enough control..
RoyE

> logic 0.

We are talking about different things. I don't doubt that your interface
works in some 99.something% of the cases. And I also don't doubt that
99.something% of the RS232 receivers are implemented in the way you
described.

I re-read the specs several times and thought about all this quite
a lot the last days. I have to admit that some of my conclusions
that I made in my first post aren't 100% accurate, but my basic
point (your interface being out of spec) still stands. And I think
now I know why it fails in some cases:

The original RS232 specifications were designed with a simple
principle in mind: reliability of an unbalanced connection.

The sender has to output at least +/-5V. The receiver has to
detect a signal of at least +/-3V. And, as a last fallback,
we have clause 7 (V.24 even says that this kind of fault handling
must be implemented for modem control lines - though it's not mandatory
for the RxD line, let's just assume RxD works the same way since in
most of the cases identical line receivers will be used for all inputs).

While a standard-conforming sender has a quite big safety region,
at least 2V without clause 7 and 6V for negative signals / 4V
for positive signals (with clause 7, assuming a switching point
of +1V), the ProSystem cable has a safety region of only ~0.5-1V.

And this reduced safety region will be a showstopper if we don't
have ideal conditions. Just think about interference, cross-talk,
ground-loops, a slight DC offset, ... We just don't live in
a perfect world.

During the last years I read approx. one posting per year
(here in this newsgroup and in web-forums) from someone having
problem with the ProSystem cable. Using a MAX232 based cable
always solved the issues.

You might say that this is not a lot, but for each individual
who experienced the problem it meant quite some time of frustration
tracking down the problem plus also a financial loss of some
10-20 EUR (or whatever they payed for the interface). And this
is one of the reasons why I don't recommend 14C89 based interfaces.

so long,

Hias

I think it's joystick. Push back on the stick to get a wall in front of you
I think. Don't remember, long time ago, so might be confusing with other
game. Shoot through the opponents wall and I think you shall hit him?

> hardware projects using this region?

Mostly. It won't be compatible with Super Carts or stuff like SDX.
Likewise I think $D100 is used by PBI stuff like MIO.

Fairly safe is $D600 and $D700 or $D600-$D7FF if you prefer. About the
only one that hacks on a regular basis in that area is Bob Wooley and
some minor ones by myself. I don't know about the latest hacks since I
have not been actively hacking of late.

There are a couple of good things about that area. Other then being
unused by most commercial software it is already decoded and has the !CS
lines coming out of the 74LS138 IIRC. That is, to add something like a
PIA or similar 68xx/65xx chip, you only need to jumper the !CS line to
the 74LS138, tie in the 8 data lines and 2-4 address lines for chip
registers and you are ready to go.

Another option is decode the address space into upper and lower halves
of the page. This moves POKEY, GTIA, ANTIC, down to $D300-$D37F using
the PIA as an example. To do this you only have to pull up one pin of
the 74LS138 and tie it to the 8th address line. I had one machine where
I piggy backed another 74LS138 onto the exisiting one like this but it
was really silly overkill. Just no way you are going to need an
additional 8 devices under the hood.

Rick

Mostly. It won't be compatible with Super Carts or stuff like SDX.
Likewise I think $D100 is used by PBI stuff like MIO.

>
Cool!

I'm not worried abut being incompatible with other carts because I am
talking about a physical cartridge of my own. I just wanted to know if the
whole range $D500-$D5FF is exclusive to cartridges.

Fairly safe is $D600 and $D700 or $D600-$D7FF if you prefer. About the
only one that hacks on a regular basis in that area is Bob Wooley and
some minor ones by myself. I don't know about the latest hacks since I
have not been actively hacking of late.

There are a couple of good things about that area. Other then being
unused by most commercial software it is already decoded and has the !CS
lines coming out of the 74LS138 IIRC. That is, to add something like a
PIA or similar 68xx/65xx chip, you only need to jumper the !CS line to

the 74LS138, tie in the 8 data lines and 2-4 address lines for chip
registers and you are ready to go.

Another option is decode the address space into upper and lower halves
of the page. This moves POKEY, GTIA, ANTIC, down to $D300-$D37F using
the PIA as an example. To do this you only have to pull up one pin of
the 74LS138 and tie it to the 8th address line. I had one machine where
I piggy backed another 74LS138 onto the exisiting one like this but it
was really silly overkill. Just no way you are going to need an
additional 8 devices under the hood.

>
Definitely, don't need this for this cartridge project but that's something
to think about for future projects.

Thanks Rick!

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Well, I did the Clearpic 2002 mod to my 1200xl. And it won't even power up!

I did a really neat job delsoldering and soldering..actually kinda surprised myself there..

So I guess I dont have the right parts?

Most of the resistors I used were 1W flameproof. I didnt know what to ask for, but I had the picture from the article and thas what they gave me. They are a much larger and blue, not like the creamy colored ones I pulled out. The only 1/2 watt resistor I had was the 47ohms, it was more like the ones already in the 1200xl.

And the 2 capacitors, I had trouble finding them. Again, I don' know what to look for, so I ended up with a "1000v 68pf" ceramic disc, and also a "1000pf" ceramic disc, don't know how many volts that one is.

Are these parts acceptable?

I've removed the stuff I put in, and now my board looks exactly like the one in the article, I'm hoping I can get her back working! She's got a 600XL OS!

Any help help would be great.

Charlie

Arrgh I got er working!

Odly, I guess I blew a power supply hooking it up for the first time after the mod? Are you friggin kidding me? So anyway I took out the mod, and after checking out another power supply sure enough it powered up. Man I was happy about that though. So I started again, and checked power after every solder. After a few I got black and white. Then color!

Well it's 2:30 a.m and Im going to go enjoy my smokin clearpic 2002 1200xl!

Could you please explain, why? I.e. why you're assuming, that everyone who is reading c.s.a.8, must at the same time be interested in the stuff that is posted to "your e-mail list"?

I am not so familiar with the different hardware modifications available.

Please describe what the result of the clearpic mod looks like (assuming the
purpose is to give a clearer screen picture). Are there any side-effects or
disadvantages?

Hello All,

I am selling electronic copies of the QUICK programming language on eBay (which includes ATR and DCMs of the disks and a PDF manual) for just £0.99 (less than US$2). This is a promotional price to 'test the waters' with this kind of distribution, so if you want to take advantage of it, you can buy one on eBay now:

UK/Europe: http://search.ebay.co.uk/_W0QQsassZdeangarraghty

US: http://search.ebay.com/_W0QQsassZdeangarraghty

Full info on QUICK and what is included, and how the product is sent to you is in the listing.

I also have available Atari to SCART and Atari to RCA cables too.

Dean Garraghty

    I think the best for the A8 was Adventure Writer. Its data format is
similar to Quill and Paws format. You can read about it here:

You can use a trackball in joystick mode but it won't really work like
you want. The 8bit computer version
does work with trackball btw.   I think there is a hacked version of
Missle Command out there for the 2600 that does
support true trackball use.

20070116

Hello!

I was looking at the graphics of the
Atari XL, and noticed that the amount
of data for a graphics 11+16 was the
same as a graphics 7+16 BUT having
also 16 colors (instead of only 4).

Graphics 11+16:
80 x 192pixels x 4 bpp = 61440/8 = 3840 Bytes
Graphics 7+16:
160 x 96 pixels x 2 bpp = 30720 = 1920 Bytes

This calculations show that the graphics 7+16
still consumes only 1/4 the data of a 11+16.
So, my question to the GTIA experts is...
is it possible to program GR.7+16 in 16 colors?

Thanks!

20070121

Today in pouet.net I saw
a game for Atari XL with
graphics 15 (160x192) with
more than 8 colors! Maybe
they are 16...
How is this possible?

Any programmers willing to tell?

http://pouet.net/prod.php?which=29245

Greetings.
so_o2

OK, first off real foggy so bear with me. I know this will need
correction but it is a reasonable approximation of what happens.

The Atari screens are mostly 40 bytes wide. That is why you get 40
columns in Graphics 0 screens.

The mode determines how those bytes are displayed. For instance in GTIA
mode you may have a byte whose bits go
XX:YY:XX:YY <could be XX:XX:YY:YY but I forgot?>
Where XX will be 0-15 and YY is the bit pattern.

In the modes like Graphics 7 and 15 the colors upper nibble specifies
color registers for the associated pixel.
AA:BB:YY:ZZ

Such that AA selects 1 of 4 color registers which may have a value from
0-255 in it for the YY pixel and BB selects the color register for the
ZZ pixel.

So the difference is: Instead of selecting one of 16 values for video
attributes the byte the nibble is broken down to indirectly address a
color register.

Yes you only get 4 colors on screen at the same time with Graphics 7,
but those colors can be anywhere from 0-255 in the color register.

No. You can arrange antic and gtia such that you
get a Gr.11 like mode with pixels as high as those
in Gr.7 (that is, twice the height) and thus half
the memory footprint, but you won't get a mode with
16 colors with pixels half the width of Gr.11 but
with 16 colors. You can of course "trick" a bit in
the sense that you show one set of 16 colors every even
frame, and the other set every odd frame and thus get
a larger amount of colors, just flickering. The amount
of flicker can be visually reduced a little bit by
altering the colors also line by line, but you won't
be able to get a steady picture with 16 colors and the
Gr.7 resolution and colors arbitrarely placed on
the screen.

Gr.11 isn't really a "graphics mode". It is, as far
as the DMA controller is concerned (that's ANTIC) just
a standard Hi-Res mode as Gr.8, and the display-lists
for the two modes will be identical. Just the color/TV
signal generator GTIA will interpret the data differently,
so Gr.11 is more a "postprocessing hack" than a screen
mode.

> Today in pouet.net I saw
> a game for Atari XL with

> graphics 15 (160x192) with
> more than 8 colors! Maybe
> they are 16...
> How is this possible?

Several techniques are possible. The classical one is
to use DLIs (display list interrupts) to change colors
on the screen, which leaves you with the four-color
restriction but only on lines, you can change them
vertically. If you wish to spend more CPU time, you
can also try to change the colors horizontally by a
kernel, which is tricky. This won't enable you either
to place the colors arbitrarely on the screen, either.

A third technique I've already described above is to use
flickering and mixing graphic modes this way by altering
them on the screen. One idea is to combine Gr.11 and Gr.9
and thus get 256 "mixed" colors with the resolution of
Gr.11, another one to mix Gr.10 with Gr.9 or Gr.11 and thus
get "more" colors with the resolution of approximately
Gr.15. The reason why that works is that Gr.10 has a
horizontal displacement of one color clock on the screen
(likely because GTIA requires the time to fetch the
contents from the color register), and thus Gr.9/11 and
Gr.10 pixels are shifted relatively to each other by
exactly one half of their pixel width. By altering the
two modes you get something "near" Gr.15 resolution,
but with some flicker.

So long,
     Thomas

The good thing about the $d500 area is that the required chip
selection signal is available on the cart port, but you would need
extra logic to decode $d100 in the cart.

Several addresses in the $d5xx area are used by a third-party real-
clock extension with a pass-thru cartridge slot, so if you want to be
compatible with this extension, you would need to avoid these
addresses. I don't remember them off my head, but I can look it up.

Well, "incompatible" in which sense? If you want to have your cart to
be inserted along with other cards (i.e. you have a pass-thru
connector), then it would matter. Otherwise, it won't.

> Fairly safe is $D600 and $D700 or $D600-$D7FF if you prefer. About the

Me, too. I'm using the $d600 area for some of my projects of myself.
(A voice interface, a parallel printer interface). But it's fairly free,
and who cares about compatibility with those hacks?

Yup. Unfortunately, the line is not available on the PBI, so I had it
added there.

> Another option is decode the address space into upper and lower halves

Some hacks use A4 to decode an extra pokey in the machine, that is,
pokey #0 goes into D200..D20F, the second into D210 to D21F (plus
all multiples of 32, of course).

So long,
     Thomas

There are video mods for all the 8 bit's I believe. The results are great.
I cant really describe it. It's Atari video, only more so. It's gotten rid

of a lot of noise. It's smoothed out some vertical bars I always see in solid color backgrounds, not eliminated the bars. I never cared about the video until I tried to get something done looking at text for extended periods.

Side affects? I'm noticing blue popping up where I think there should only be thin-bright-white. Not the normal white you see in the DOS menu for instance. I've adjusted the wheel on the board but can't get it to go white. Maybe this is the components I used, maybe this is normal. It's worth the tradeoff though, everything else looks fantastic. And I'm not even on a Chroma/Luma setup. I'm happy I did it. I wouldn't go back. I've only had a few hours really checking it out though.

Charlie

Hello,

it's always possible to use Player/Missiles (Sprites)
as overlays to generate more colors.

And don't forget that multicolor character modes (Graphics 12 and 13)
have 5 instead of 4 colors.

Go to www.atariage.com and search for "Graph2Font"
or try a Google search.

This program allows you to create pictures with Player/Missile
overlays and DLIs. There are many demo pics around.

Even in plain BASIC, this technique can be used and even
new colors are generated at the places where players and
background pixels are located.

In games, a combination of software sprites and
P/M overlays is possible, while DLIs are used to
improve the background graphics.

Does also work in HiRes mode (320*192), but limited.

Check the Multicolor and HiRes demo pics of Graph2Font.

Here is the link to the "Graph2Fnt" topic on www.atariage.com :

http://www.atariage.com/forums/index.php?showtopic=34916&st=0

There are many demo-pics and links.These pics show that the
ATARI 800 can do much better than the standard 4 color pics.

Btw., if you like good POKEY music, try this thread :

http://www.atariage.com/forums/index.php?showtopic=68283&st=0

It's about RMT, a program that can be used to create high-quality
music on the ATARI 800 with effects you never heard before.
There are some of converted C64 SID songs for download.

It's a bug ported over from the original Atari BASIC (yes, TurboBasic
is a drilled-up Atari Basic). It "confuses" the CTRL-R ATASCII character
with the token for the semicolon.

I've a version where I fixed this (plus a couple of other things).

So long,
     Thomas

Hallo Thomas,

How do you write an Atari BASIC program that reproduces this
fault? Please post a tiny example program.

Anders

Exactly the same way. Try to print a string that ends with ^R.
Not all versions of Atari basic had this bug, though. It got
fixed in either Rev.B or Rev.C, I don't remember.

So long,
     Thomas

Hi Thomas,

You said, "I've a version where I fixed this (plus a couple of other
things)."
Since this bug now troubles me would you post a fix for Turbobasic:
bytes and offset might be enough.

TIA,
RoyE

I think I'd rather send you the binary instead, that's easier. Is your
email valid? If so, please have some patience, I don't have it online
right now.

So long,
     Thomas

Thanks Rick! Thanks Thomas!

I was only concerned with internal projects that may have used
$D500-$D5FF. After some thought I realized this cannot be the case
otherwise there would have already been conflicts with existing
cartridges.

I don't have any pass-thru cartridges so that is a non-issue for me.

Thanks for all the additional practical tips. Good to keep in mind for
future projects.

- Steve Sheppard

Does anyone know where I can get a copy of the Ark Operating System by
Arsoft, or at least more information in english? The web sites are all
in german, but the screenshots appear to have english for the os itself
but german filenames, etc.

B&C (www.myatari.com) has Miditrack II.
It comes with the interface, however, not just
the software.

Thanks for answering. This sounds like something I would like
to have on one of my Ataris.

Somewhat related: We played Burgertime on an Intellivision last
weekend, and although its video (RF) output was far from perfect, at
least the colours were clear. I was particularly impressed by the low
level of colour bleeding.

Anders

Well hello!

They offer some of the best premium newsgroup access anywhere.
You can find almost anything you are looking for.
Great prices and support await you as you travel into the beautiful world of premium nntp access.
One thing I love about them, they don't keep log files of the news I read or files I download.
With some of the fastest connections around it's no wonder people love it and keep coming back.
Take a look, I know you'll love it as much as I do.

800 GIGS of new multimedia content each day
Posting allowed!
2,000,000 new posts each day
Very long retention

I'm so glad I found newsdude.net and you'll be glad too!

Hey all, I was curious about location R63 on the 1200xl motherboard. I
just did the 'Clearpic 2002' video mod, where your supposed to put a 1
ohm resistor at location R63. Thing is I've read that this is the same
resistor that is to be removed and replaced with a wire if you want to
add the +5v back to the SIO port. Does this location have anything to
do with the video circuit? Or did the author of the mod figure "while
your in there, add +5v back to the SIO port" and not mention it?

Just curious,
Charlie

Nothing to do with Clearpic. It's just so you can run sio powered stuff
like PR:Connection. It was never clear why Atari added the resistor in
the first place.

Ok thanks. So then my next question is, will a 1 ohm resistor (in the
Clearpic 2002 instructions) work the same as a wire, do I have the
power back on the SIO port now?

Hello!

I was programming the Atari XL
in BASIC, but using Atari800
emulator, version 2.0.2 under
Linux.

I came to the following bug,
when using "COLOR 125" or
"COLOR 155" in a high
resolution graphics mode
(8,11,15,...).

First look at this simple

program in graphics 15:

```
1 GR.15+16
2 COLOR 1: PLOT 0,125:DRAWTO 50,125
3 COLOR 2: PLOT 0,155:DRAWTO 50,155
4 GOTO 4
```

Works fine. And paints 2 lines,
horizontal in 2 different colors.

Now I try using very high COLOR
values, the same I use for the
height of each line:

```
1 GR.15+16
2 COLOR 125: PLOT 0,125:DRAWTO 50,125
3 COLOR 155: PLOT 0,155:DRAWTO 50,155
4 GOTO 4
```

Well, this won't work. And paints
a strange and rare picture, like
a torch...

Does anybody in the Atari World
know why?

Greetings,
SoLo2

Well, this is not an "Atari BASIC" bug, the problem is in the operating system ROM, in the screen handler to be specific. Its "plot" routine is in fact sending characters to the "S:" device, the ASCII code of the character is COLOR to be plotted and they (the chars) endup as appropriate bit patterns in the screen memory, and later the Antic chip + GTIA chip interpret them as color pixels.

Now, the device has two control characters: ASCII 125, which is "clearscreen/cursorhome", and ASCII 155, which is "newline". So, COLOR 125:PLOT x,y doesn't draw anything, just clears the screen and sets the graphic cursor in the upper left corner of the display. Next, you want it to draw something to 50,125 - so it does, this time avoiding clearing the screen as every pixel is drawn, because the DRAW uses a lower-lever graphic routine than the PLOT, and the lower level routine does not interpret characters.

So, the first PLOT/DRAW begins and finishes the line, where it had been told to (from 0,0 to 50,125). But why the other PLOT/DRAW draws actually a vertical line (it does the same if you use COLOR 125 instead of 155), it is beyond me at the moment. :)

It's not related to Atari Basic. It is a "design flaw" of the

operating system, namely the S: handler. The problem is that this
handler interprets the two values as control codes, 155 as EOL/line feed
and 125 as clear-screen. It really shouldn't - that would be the job of
the E: handler. Unfortunately, E: and S: are rather... entangled.

So long,
     Thomas

Just as a by the by comment. If you aren't using the other functions in
the OS like character under the cursor or last character, you can really
speed up the system by using your own drawing/plot routines. The Atari
is really something special, it is almost like a word processor with the
data saved and cursor movements. While safe and feature laden, it slows
things down a bit.

As long as you aren't plugging in something that is a dead short, a wire IMHO would be prefered. I've never used anything but wire on maybe 6 1200XL and no problems.

It might be an error in the Clearpic 2002 instructions?

Right, I'm not really concerned about the power, more that there is another
resistor that really should be replaced with the 1 ohm resistor that could
improve my video circuit.,

Charlie

sfnet.keskustelu.politiikka:55497

Despite an orchestrated campaign of attempted censorship by UK-resident newsgroup readers, TFN did not bow
to demands for a suppression of freedom of speech. TFN general policy on the matter is as follows;

Draft Policy on Account Deactivations due to News Group Postings
==========

News group postings occasionally take the form of a message which goes against the "topic" of the conference.
For example, a derogatory message about Canadians in the soc.culture.canada.

Members of such news groups then may send a message to the system administrators asking that a user's account
be terminated because of such posting.

The Toronto Free-Net Board of Directors has taken the position that the only postings that will get a person's
account terminated is material that is illegal under Canadian law. Otherwise, the Toronto Free-Net will not

take any action.

Freenet Executive Director Mike Anderson had this to say regarding the continued attempts of a minority of usenet
participants to have my account on his system deactivated;

The TFN's policy is not to take action against members unless they contravene the Criminal Code of Canada, or
engage in practices such as forgery, attacks against other computer systems or mailbombing.

Mr. Corley, while possibly being very annoying, has not contravened the TFN's policies. The TFN believes strongly
in freedom of expression, while recognizing that the price for such freedom may be a high signal-to-noise ratio in Usenet.

If Mr. Corley breaks the law, we will take action -- until then, he has the same rights as any TFN member to post
to Usenet newsgroups. Actions such as mailbombing the TFN in protest will be met by strong complaints to the
originating site's postmaster. The best defense against unwanted postings may be simply be to ignore them and deny
the poster an audience.

TFN Executive Director Toronto, Ont CANADA

Personally, I find it gratifying that my contributions to usenet discussion are recognized as being conducive
to a high signal-to-noise ratio by their quality and thoughtfulness.

Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984?
The ones which watched you back? Which you could never get
rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has
made his nightmare follow into the world after him.
Since 1990 the British have been waging war against one of
their own citizens using surveillance to invade privacy
and a campaign of abuse in the transmitted media in
their efforts to humiliate their "victim".

And the most remarkable thing about it is that what they
do is not even illegal - the UK has no laws to protect
the privacy of its citizens, nor does it proscribe
harassment or abuse except in the case of racial abuse.

A lot of people in England know this to be going on,
yet so far they have maintained perfect "omerta";
not a sound, not a squeak has escaped into the English
press, and for all the covert harassment absolutely
nothing has come out into the public domain.

Have the British gone mad? I think we should be told.

From: "Mr.B" <dgb01@stir.ac.uk>
Newsgroups: alt.conspiracy
Subject: Re: BBC's Hidden Shame
Date: Mon May 8 05:32:13 1995

Mmmm.

Who, exactly is this victim you're talking about?

First up, Britain or the UK (not 'England' - England is
a part of Britain, like Kansas is a part of the USA) does
have laws that protect the individual from harassement -
you can't just threaten people willy nilly. There are laws
against that. And if someone lies about you in the press
or tv then you have recourse to libel/slander etc. laws.

True, Britain has no 'privacy' laws as such, but isn't that
a good thing? As of this moment, the govt. are considering
a privacy law, but it is unlikely to succeed. Why? Because any
such law would benefit the priviledged and those in power.
Privacy laws, while supposedly protecting the individual, help
those in power hide their mistakes/scandals. They stop the press
etc. investigating. Privacy laws are undemocratic - they prevent
the people from keeping an eye on govt.

And stop looking for some kinda conspiracy in the British
press. It's hardly perfect, but your notion that they don't
cover/campaign against press legislation, harrassment,
discrimination, human rights etc. is plain wrong. You've never
seen a British paper in yr life.

You clearly have a specific case/individual in mind. Speak up!
The thought police aren't coming round just yet.

Douglas.

Date: Mon May 8 19:21:28 1995
Newsgroups: alt.conspiracy
Subject: Re: BBC's Hidden Shame

Confession time - the victim is/was me (except my name isn't
Corley, but that's irrelevant). What happened was not threats;
just invasion of privacy, in a partiicularly flagrant and
shocking way, in a way which most people would consider to
constitute harassment.

You know there's a particular category of person with mental
illness to whom TV and radio "talk", ie they feel the broadcast
is directed at them in particular? This happpened to me,
quite some time ago in the UK (I'm originally from London,
so I've seen plenty of British media print and other).

They invaded my home with their bugs, they repeated what I
was saying in the privacy of my home, and they laughed that it
was "so funny", that I was impotent and could not even communicate
what was going on. Who did this? Our friends on BBC television,
our friends in ITN, last but not least our friends in Capital
Radio in London and on Radio 1.

How did they do this? I'll give you an example. About a year ago,
I was listening to Chris Tarrant (Capital Radio DJ among other
pursuits) on his radio morning show, when he said, talking about
someone he didn't identify, "you know this bloke? he says we're
trying to kill him. We should be done for attempted manslaughter"
which mirrored something I had said a day or two before
(I'm not paranoid, honest!). Now that got broadcast to the whole
of London - if any recordings are kept of the shows then it'll be
there.

You mean the category where they think that everyone is after them ? that
one ? So lets get this straight you know you are paranoid and you think
that they are out to get you ? Uh huh, try putting the two together and
see what you come up with.

>quite some time ago in the UK (I'm originally from London
>so I've seen plenty of British media print and other).
>They invaded my home with their bugs, they repeated what I
>was saying in the privacy of my home, and they laughed that it
>was "so funny", that I was impotent and could not even communicate
>what was going on. Who did this? Our friends on BBC television,
>our friends in ITN, last but not least our friends in Capital
>Radio in London and on Radio 1.

Oh yeah, I can see it now. All of them banding together, in a united effort against one man. So ITN, the BBC, and Capital all decide to sit round the table and they come up with idea of breaking into someones house, putting bugs everywhere, listening in to his conversation, and shoving it out on the news everyday. This someone has nothing to do with politics, or business, or entertainment, just an ordinary Joe Bloggs who seems to be extremely paranoid.

Have some sense, grow up and smell reality. What you are talking about would take loads of planning, tens of thousands of pounds and lots of people involved in the planning, execution and maintenance of it. You must have a very high opinion of yourself to think you are worth it.

>How did they do this? I'll give you an example. About a year ago,
>I was listening to Chris Tarrant (Capital Radio DJ among other
>pursuits) on his radio morning show, when he said, talking about
>someone he didn't identify, "you know this bloke? he says we're
>trying to kill him. We should be done for attempted manslaughter"
>which mirrored something I had said a day or two before
>(I'm not paranoid, honest!). Now that got broadcast to the whole
>of London - if any recordings are kept of the shows then it'll be
>there.

Of course you are not paranoid, just slightly mad. Did you ever look for the bugs in your house ? If not, why not ? I mean if I thought that was happening to me, I'd search the place from top to bottom, I mean I live there I would know if anything was out of place. If I was really paranoid, whoops I mean suspicious, I would call in one of those bug detection teams which have those machines that pick up the transmitted radio waves. This reminds me of BUGS, that new programme on BBC1 on saturdays which is all about this kind of stuff, but, shown as a drama / thriller. I suppose thats based on you as well is it ?

>is that there is a conspiracy in Britain, that it encompasses the
>broadcast media, and there is no way of breaking the conspiracy.
>The people who are involved in it will not open up.

What a load of jolly hollyhocks, I would say something else but, apparently students are not allowed to swear on newsgroups in case it damages the reputation of the university or some such jolly hollyhocks.

This guy is extremely paranoid to suggest that the entire British media is after him in such a big way. He gives no real reason as to why they are after him, just that he suffers/suffered from a slight mental disorder, could it be paranoia perhaps ?? No surely not.

I put it to the house that he has never recovered from this mental disorder, lets come out with it and call it paranoia, and thinks everyone is after him. Remember just because you aren't paranoid, doesn't mean they aren't after you.

This guy has a serious problem to suggest that the media would go to such lengths just to single out and ridicule one person. I mean apart from

anything else, we (the listening masses) wouldn't be interested unless
it concerned the royal family, politicians or showbiz personalities. e.g.
the camillagate tapes. I would think that almost everyone, no matter how
much they went on about infringements of privacy read the transcripts with
interest. I really don't think that Joe Bloggs ordinary guy or paranoid
nutter would have the same appeal. Well actually I dunno. :)

Regards,

Paul.

That is what happens in big cities. Hell, it scared me to death when I first started working in Manchester. People keep talking to me on the streets, even if its just to say hello, and I've no idea who they are. This happens to most people, don't worry about it.

>>paranoid, whoops I mean suspicious, I would call in one of those bug
>>detection teams which have those machines that pick up the transmitted

>That's exactly what we did. We went to a competent, professional detective
>agency in London, paid them over 400 quid to debug our house. They found
>nothing.

Doesn't this suggest to you that there are, in fact, no bugs to be found?

>Over Easter I went to the police in London, telling them basically
>what I've posted here. I don't think you'll be surprised to learn
>that I didn't get very far; they asked "why would they be doing this to
>you in particular?" and the answer "they are because they are" doesn't
>go very far.

Exactly. All you have offered so far as proof of your harrassment by these people is:

	1) Someone on radio said something that you had recently said
and
	2) People on the streets seem to recognise you.

These are both perfectly normal occurences and happen to lots of people every day so it is unsurprising that people here, and the police, are not taking you seriously.

Trying to always keep an open mind about things I would say that one of three things is likely.

Either there is a lot more to this that you are not telling us, or you are messing about or you have some genuine delusions. I'd like to think that in two of the three cases you would find some real support here, but it seems unlikely I'm afraid.

Claire

>to most people, don't worry about it.

The key is the pattern, or a change in the pattern. I've lived in London
almost all my life, and just walking around the streets, I never got
hassled by anybody. All of a sudden, people start harassing you,
throwing abuse at you, behaving as if they know you personally, as
if they've seen you before somewhere. I read in the papers that this
happens to Colin Stagg and people like that Eastenders actress, but
they've had their picture in the paperes, so that is understandable.
In a couple of cases people have even known my name - when I was in
London over Easter I was walking down Shaftesbury avenue in the
West End when somebody (no idea who they were, just some bloke with
his girlfriend) called me by name - quite clearly, and my name is
distinctive. This also happened once about four 1/2 years ago, onn
the tube - some blokes I had never seen started chanting my name
and a term of abuse.

It's the pattern which convinces me there's something to it - and
would convince any impartial abserver who could see things tyhrough
my eyes.

>Doesn't this suggest to you that there are, in fact, no bugs to be found?

There's a little story behjjind this. First iof all, in 1992 I worked
for a company where the people made clear they knew what was going on,
first of all directly (the very first evening I was there I went out to
the pub with them and the Technical Directpor said to another guy,
"is this the bloke who's been on TV?" "yeah, I think so") and also
indirectly, by rep[peating stuff I was saying at home in London and
in my rented accomodation there (I moved several times in the course of
1992 and they followed me each time). Now, if "they" (the buggers)
knew their bugs could be found easily, they wouldn;'t be keen to make
their existence known, would they?

Also, in summer 1992 I went on a trip abroad to Europe by coach, and

on the way out there were a couple a little younger than myself on the coach
a bloke and hius girlfriend. He said things about some bloke who was
never named, who sounded exactly like me - and he made explicitly
clear that our house was bugged, and that a neighrbours house was
bugged (and at work they'd been rep[earting what was said at the
neighbours, so this looks like independent corroboration).
They also said stuff like "at school he was always really streesed,
they found someone from his school and he was a real psycho"
and that "he was in a B&B for one night and they got him", dead right
again, I had been in B&B for once night a few days before this trip
and weatching the news again got a reaction from the newsreader.

Subject: Re: BBC's Hidden Shame

>:some pirate radio station in London in 1991, started listening to
>

>Conclusive proof if ever I heard it.
>
>Of course you were the only person in the office in the whole of Britain

Yeah, but this is the point. Each incident is easily and automatically
deniable along the lines you're taking. But when this happens every
time, and when you get independent corroboration from other people,
then there's no escaping it. For example, immediately after I lost
my job in 91 I went into the local garage to get some work done on the
car, and one of the blokes there said to the other, "so what do you
think of it then? it's getting killed on the radio isn't it"
Now again, you look at that and no proff; you can ask them what they're
referring to and they can say they're talking about something else.

>I know you may be a little paranoid, but I suggest you sit down
>and work out rationally what possible reason anyone off television,
>or radio would have for listening to your conversations. After all
>it must be hard enough to present a show to millions of people
>without the added burden of watching and listening to a single
>person and slipping their phrases into the programme.

These presenters are clever people. They wouldn't be presenters
if they weren't - they're easily capable of reacting to an individual
in this way.

What possible reason? I guess because they think it's amusing to do
so. They know that if you ever tell anybody, without being able to
show any evidence, then the reaction you'll get from just about
anybody will be the one you're showing now.

I realize there are loads of people in England and elsewhere with
the sort of thoughts I've described in these postings; and almost
all impartial observers would say that nothing other than an
go after their private conversations (if they did it to me then I can
do it to them, it's a questions of technical competence and money).
If you were lucky, you might be able to entrap them into admission.
You could of course harass or threaten them back (any coppers reading
this?) but that would be illegal and might get a result quite
different to the one you're trying to achieve. Of course, it might
come out of its own accord given time - if so many people know, if
they have an escape valve in their "subtext" through the media,
will it not cease to be at a covert level, given time? Surely it
is in my interest for it to become overt, since the transgressions
at this time are on their side and not on mine?

Thoughts? There must be some way of breaking the secrecy. This
isn't the first time in human history that a conspiracy has taken
place on this scale, but the truth tends to out. The situation
now is they think they';re "winning" hence have little stimulus
to change the rules - if they started seeing themselves "losing"
things could change drastically.

Mike, if that is your name,

I'm going to try to rationalise what you're telling us. I can think of three possible explanations for what you are experiencing.

One is that there _is_ a conspiracy against you. As a previous writer said, though, a lot of these programmes are taped, so it really isn't possible in some of the cases you've named. Further, why were no bugs found in your house? Finally, unless you are a political figure or someone else in the public eye, why would anyone bother? People like me (and I assume you) are small fry; our contribution to society is likely to be minor. Why would anyone spend so much money and effort on you?

Another possibility is that you are developing some kind of paranoia. There's no stigma attached to this; we're all paranoid to some extent, although perhaps not to the extent that a doctor would call us paranoid. I think paranoia is quite a straightforward explanation here - you really do believe that all these things are aimed at you; you see people everywhere trying to get at you. Logic suggests that this cannot really be the case.

The third possibility is that not even you really believe any of this, and that this is a "troll". I'm not sure I believe this possibility, but it's possible.

Anyway, if you want to be sure that you're _not_ going mad, I'd go and see your G.P. if I were you. If you don't trust him/her, why not see someone recommended by a person you can trust? If you don't trust anyone any more, don't you think it's time you got help?

For a troll, the posts are remarkably well-informed on paranoid
behaviour.. you'd need to be one, or be reasonably well-informed on the
subject to sustain the tale... which lead me to my theory...*ahem*...:

An extension to possibility 3 (Number 3.5, perhaps?) is that the original
poster may be somehting like a psychology student writing a term paper
on the net community's reactions to this tale. (Now, there's paranoia
for you! Not only are they listening to/watching us, they're writing
reports about us too...:-)

More likely, though, is that the poster is genuinely in need of professional
help (he has intimated as much, himself) and, as such, he should be encouraged
to seek it.

regards,
IanP

Yep :-) Its been a few years. I guess the text adventure thread
jolted me in to nostalgia mode.

Anyway, if memory serves, games made with the quill are somewhat
backward compatable with the A8 Adventure Writer. It wouldn't take much
to create a utility to convert the many dozens of Quill games over. That
might be kind of cool, to release 40 or 50 new text adventure games for
the A8.

>did it to you, what would you do?

But we've *done* that. I certainly have at least. Way back when you
originally started posting and your posts were neither tediously repetitve
nor stupidly long.

But whenever anyone makes any good suggestions you ignore them and start
posting from the begining again. You don't want us to help you - so what do
you want? If you really wanted help you would listen to peoples suggestions
and respond to them. Is this just an attention thing?
But I'll try again, because I'm a fool like that.

>o   Tell people about it, go to the police / legal services
>   Done that; those around me either don't believe me, or they
>"sort of" believe but can't do anything about it. As for going
>to the police; I did, over Easter. Discouraging. They must be
>familiar with the occasional person walking into a station with
>this sort of story. "If a psychiatrist says you're imagining
>it, then that's what it is".

You haven't yet given any examples of anything concrete to suggest that this
is really happening to you. This, I would imagine, will be the stumbling
block for the police. How can they possibly help you when your only evidence
is a jumbled mess of TV presenters saying things that could be construed as
answers to your comments and the 'feeling' that people are talking about you
and watching you?

I seem to recall that last time this was being discussed someone asked if you
had been to see a psychiatrist about this - after all if this is really
happening then you have can only benefit from being given a clean bill of
health. I don't recall an answer.

>   I also went to a firm of solicitors; again, very
>discouraging. Put bluntly, they can't deal with cases where the

>perpetrators aren't well-defined and the existence of the crime
>itself is unprovable.

Well how could they? Who would you sue? The country?

>o   so if that option is out, what's left? well, there's the
>"do nothing" option. To some extent this option works. They've
>spent a lot of money and ultimately achieved nothing except to
>force me out of the country - which has been an own goal for
>them, since now they can't do what they were doing in the UK.
>Expenditure of further resources would feed the pockets of
>their greedy contractors, but is a waste of money as far as the
>employing organization is concerned.

So you are no longer in the uk? And this is not happening anymore?

Then let it go. Just leave it alone and get on with your life. Its just not worth it. There is nothing you can do to prove that this happened whether it did or did not. So forget it. Go and explore the net - when people aren't spamming it with useless repetitve posts there's a lot of interesting and worthwhile things out there to see and do. Likewise real life (I'm told *&).

>completely conventional, I have a good academic and work
>record. Until all this started, I had no mental health
>problems; the diagnosis of illness was only after 2 1/2 years
>of abuse. If they did this to me, they could do this to
>absolutely any British citizen. If this stuff gets out, it
>won't be me that has to worry - it'll be them. They take a
>normal person, lie about him, demonise him, try to force him
>into killing himself - and this is in a country where the rule
>of law applies?

If this gets out then *that* will be the time to bring your claims to the foreground.

The only thing ruining your life right now is you, Mike. And the only thing that will make your life any better now is also you. So go and make your life better and show them that they failed.

Claire

==========

>But we've *done* that. I certainly have at least. Way back when you
>originally started posting and your posts were neither tediously repetitve
>nor stupidly long.

Once again we're running into a brick wall. The reason I started posting was because I couldn't figure out a way out of the situation, and thought that saying it out into the open would provide a catalyst for one of those "in the know" (there are plenty in this category, and it's a fair bet that some of them are reading this) to speak up.

It hasn't worked, yet. A little more aggressive shit-stirring (excuse expletive) might do the trick. Perhaps Usenet posting is the wrong arena for this sort of activity; although obviously it does have the advantage of rapid feedback.

Thing is, for people to open up, you would have to provide them with a reason why it would be in their interest to do so. There's no obvious way of doing that; to get thinking people to incriminate themselves when they're safe in denying all knowledge is not a trick I can figure out how to do.

>But whenever anyone makes any good suggestions you ignore them and start
>posting from the begining again. You don't want us to help you - so what do
>you want? If you really wanted help you would listen to peoples suggestions
>and respond to them. Is this just an attention thing?
>But I'll try again, because I'm a fool like that.

A "good" suggestion would be one which had the effect of halting the persecution, which so far hasn't happened. If you make a "good" suggestion then damn right I'll stop posting - because then I won't have to.

>You haven't yet given any examples of anything concrete to suggest that this
>is really happening to you. This, I would imagine, will be the stumbling
>block for the police. How can they possibly help you when your only evidence
>is a jumbled mess of TV presenters saying things that could be construed as
>answers to your comments and the 'feeling' that people are talking about you
>and watching you?

Because, as said previously, concrete proof does not exist. If it existed then I wouldn't be talking to you - if it could be proved, or if those doing it could be found, they wouldn't be able to continue.

What's happened is all conversation. You can't prove conversation, not without a tape recorder, and even then you would have to prove that what they meant corresponded to what you understood.

The psychopath who manages the Applics group at my previous employers played little word games, not only with me but with at least one other person in the group; words which rhyme with swear words, words which are ambiguous, eg "bent", words which rhyme with wank, "sheet" rhymes with shit, end (how was your weak end? being the standard salutation on a Monday morning). Sounds childish, most people would easily tell him to fuck off; except to people with predisposition to depression and the inability to express themselves (this was before I started taking medication), that sort of nastiness is not bearable. After ten months of this I was so ill I was crying constantly, eventually I went into hospital and started on medication. Somebody else he did this to (over a year later!) got so depressed he took an overdose of pills, had to go on antidepressants and left.

And where does the "concrete proof" of this trouble exist? NOWHERE. Even if you had physical evidence, even if you had the presence of mind to record what was said, how could you prove what he actually meant by what he was saying? In some cases of harassment you can prove what was done, because it's undeniable. But when the harassment is done with any presence of mind whatsoever, it becomes difficult. In the case of the wider harassment, the people doing it obviously know what they're about - they must have done similar things to other people before in one form or another, and they know what they can get away with, they know what the police will do nothing about.

>I seem to recall that last time this was being discussed someone asked if you
>had been to see a psychiatrist about this - after all if this is really
>happening then you have can only benefit from being given a clean bill of
>health. I don't recall an answer.

Yes. The reply was of the "neither confirm nor deny" variety. Not much else they can say, is there?

>Well how could they? Who would you sue? The country?

Hmmm, now there's a thought... :-)

>If this gets out then *that* will be the time to bring your claims to the
>foreground.

Wrong way round. It won't get out unless I do something to bring that about; remember, it isn't in THEIR interest for THEIR criminality to be exposed. Yelling loudly on Usenet might nudge things along in the right direction.

>The only thing ruining your life right now is you, Mike. And the only thing
>that will make your life any better now is also you. So go and make your
>life better and show them that they failed.

Ignoring them would be bliss, but it's not a winning strategy.

There are going to be more of these posts. Sorry. That's the way it is.

>Very unstructured, no proof whatsoever. So why should anyone
>take it seriously? If I said to you, "my next door neighbour eats
>babies", how much credibility would you attach to that?

Well, cos it's true. I was hoping that someone "in the know" would
appear and make some self-revealing comments, but that hasn't
happened. Everyone's keeping quiet. What a pity.

>>This is an agglomeration of articles and replies previously
>>posted to Usenet, so it's a bit hard to read. This posting
>>describes a campaign of character assassination initiated

>Who's character is being assassinated? It isn't clear from the post.
>Are we talking about Grenville Janner? I thought he was a spook
>himself? He's certainly able to hold his own on the issue you cite.

Mine, mainly. The reason for putting that episode at the top
of the posting is that they tried to kill two birds with one stone
at the Beck trial - they simultaneously put words into the mouth
of their invented "witness" to smear Janner, and repeated exactly,
word-for-word, stuff which had been said by and about me.

That was the only occasion (the only one recognizable to me,
anyway) when they went after another target at the same time.
And it's quite lucky they did that - because it could give some
pointers to who they might be.

Presumably there are people still around who were involved in
that trial, and know what happened. Beck might be dead, but the
"witness" would still be around, as would Beck's solicitor.

>>by a group of people or agency within the UK. Although
>>they have never presented their identity, you can draw

>>your own conclusions on that point. There aren't many
>>people with the technical resources and contacts in
>>society to make feasible the sort of deliberate attack
>>on an individual which is described in this article.
>
>There aren't _any_ as far as I am aware.

I'm afraid there are.

>>The most disturbing part of the whole episode is the
>>participation of British institutions and their members, fully
>>comprehending what they do, in what is an act of attempted
>>murder against a British citizen.
>
>The whole society, in fact. From the top to the bottom. They
>wouldn't be trying to tell you to kill yourself by any chance,
>would they?

You got it. I'm a popular guy.

>>After the trial Janner said that "now he knew what it felt like
>>to be a victim of Beck's"; but, it wasn't Beck who set up the
>>attempted character assassination on Janner; the fact that they
>>took a side-swipe with their verbatim repetition shows
>>where the real source is to be found.
>
>The newspapers?

Well, your guess is as good as mine. But what newspaper would
send a team after someone for five years? I don't think so,
somehow. Of course they could, but it wouldn't be in their
commercial interest.

You'd have to look at a corporate entity which would indulge in
activity of this type, and the nature of the contacts they have
narrows down the search.

>>The goons behind the molestation are lower than the paedophiles
>>they use to convey their propaganda - they use the same
>>strategy of covert abuse, but there is nobody to check their
>>actions, or to bring these criminals to justice.
>
>Ummm.. Janner is a Barrister, a journalist who writes on a wide
>variety of issues, and a long-standing Labour MP. If he's unjustly
>smeared, he's more that capable of setting the record straight.

Janner blamed Beck for the invention. He didn't say anything about
it having any other origin. Even had he suspected any other source,
he could hardly have pointed the finger without some evidence.

>You say that the media is making similar allegations about you in
>relation to this issue? So, you're accused of child abuse, amd
>the allegation was reported in the media, I assume.

I've been accused of many things although that wasn't one of them.
Most of them have been yelled in my face by people on the street
in London at some time or other. Bit difficult to misinterpret
when that happens.

>What exact;y are they saying about you? (Respond here please. I'm
>leaving the UK tomorrow, so I can't read e-mail.)

It changes with time. Every so often, they sing a new song;
so at one point the allegation was homosexuality, at another
is was low intelligence, then it degenerated into sexual abuse.

<snip>

>>They invaded my home with their bugs, they repeated what I
>>was saying in the privacy of my home, and they laughed that it
>>was "so funny", that I was impotent and could not even communicate
>>what was going on. Who did this? Our friends on BBC television,
>>our friends in ITN, last but not least our friends in Capital
>>Radio in London and on Radio 1.
>
>How do you know this? Just from what you hear on the radio?

I can't remember if this was mentioned in the "regular" posting,
but on a few occasions they set me up with people nearby to talk
about me, or more correctly, to talk about somebody who
(in their minds) "resembles" me, with actually naming me.

One such occasion was a coach trip to Europe in June 1992.
The "set up" comprised a guy talking to a vacant giggling female
about "this bloke", who was never named. Apparently "they"
(also never named) "found somebody from his school",
"they" "got" him at his house and at a neighbours, and at
a B&B where their target was for one night.

Apart from that, yeah, from "what I hear on the radio". And
from what I see on TV. (I wouldn't be doing my job as a
mentally ill person properly if the TV and radio weren't
talking to me, now, would I?)

>>Oh yeah, I can see it now. All of them banding together, in a united
>>effort against one man. So ITN, the BBC, and Capital all decide to sit
>>round the table and they come up with idea of breaking into someones
>>house, putting bugs everywhere, listening in to his conversation, and
>>shoving it out on the news everyday.
>
>But why would they do this? What possible reason would they have?

But why get at anybody? Victimisation is the pastime practised against
other people; as the scorpion said to the frog, "it's in my nature".

>Are you aware that what you describe is also a common symptom of people

>who are suffering from a psychiatric illness? Have you been to your
>doctor and told him about this? Did he prescribe any medication? Have
>you been taking it, or have you stopped?

Yes, Yes, and Yes respectively. Still taking it. Doing quite well actually.

>>This someone has nothing to do with
>>politics, or business, or entertainment, just an ordinary Joe Bloggs who
>>seems to be extremely paranoid.
>
>Usually a clinical symptom rather than proof of a conspiracy in such
>matters.

>>How did they do this? I'll give you an example. About a year ago,
>>I was listening to Chris Tarrant (Capital Radio DJ among other
>>pursuits) on his radio morning show, when he said, talking about
>>someone he didn't identify, "you know this bloke? he says we're
>>trying to kill him. We should be done for attempted manslaughter"
>>which mirrored something I had said a day or two before.
>>Now that got broadcast to the whole of London - if any recordings
>>are kept of the shows then it'll be there.
>
>And this is supposed to mean... what? Chris Tarrant is in on this plot
>to kill you? It sure sounds like a joke to me. When you start to get
>ill, the mind often makes connections that seem logical and lucid to
>you, but do not to the rest of the world. This is one of those connections.
>They are usually known as delusions.

This is the problem, and there doesn't seem to be any way around it.
If a clearly sane person reported this persecution, you might believe
him, but probably you'd tell him to go see a doctor to "verify his
sanity". If someone with the illness of which you could argue these
things to be symptomatic says these things, again, you might believe
him, but it would be unlikely - the easiest route is the one you are
taking in the above paragraph. The only way I can convince you of what
I am saying is by giving precise details of what, when, how - and for
most of that stuff is based solely on memory.

To prove it would require an admission from somebody, or else hard
proof in the shape of physical evidence such as tape recordings.
Of course, I don't have that.

>The idea of a "pattern", and the notion that if anyone could look
>through your eyes they would see the same thing is very indicative of
>the onset of a psychiatric illness. Schizophrenia and manic depression
>have similar symptoms. I'm not trying to be disrespectful here.
>This may be an illness and it can be managed by the use of medication.
>If it _isn't_ treated, it can lead to terrible tragic consequences.

I'm quite aware what the symptoms would be, and that the reality
corresponds to those symptoms.

But if anything, that is an argument which could convince you of

the truth of what I'm saying. If they deliberately set out to simulate the symptoms of schizophrenia - in other words, if they know through observation that their target is either suffering from the illness, or is on the borderline and could be pushed in with an appropriate stimulus, then they can feel safe in what they do, since once you are registered as suffering from the illness, people will assign less credibility to assertions that persecution is based in reality.

That this can happen, and people collude by silence, is absolutely horrifying. It is all the more horrifying that it can happen in a country such as Britain which has no history of repression. Perhaps its happening in the UK is due to the arrogant assumption of moral superiority on the part of those in the media and others involved - we won the last war and we can keep harping on about German and Japanese war crimes, so we can do whatever we like and we'll be right, up to and including destroying the lives of our citizens (as long as we're not caught doing it).

>>That is the level it's at - basically they show they're listening
>>to what you're saying at home, they show they're listening to you
>>listening to them
>
>But why? And why you? Do you realize how much it would cost to keep
>one person under continuous surveillance for five years? Think about
>all the man/hours. Say they _just_ allocated a two man team and a
>supervisor. OK., Supervisor's salary, say, £30,000 a year. Two men,
>£20,000 a year each. But they'd need to work in shifts -- so it would
>be six men at £20,000 (which with on-costs would work out at more like
>£30,000 to the employer.)
>
>So, we're talking £30,000 x 6. £180,000. plus say, £40,000 for the
>supervisor. £220,000. Then you've got the hardware involved. And
>any transcription that needs doing. You don't think the 'Big Boss'
>would listen to hours and hours of tapes, do you.
>
>So, all in all, you couldn't actually do the job for much less than
>a quarter million a year. Over five years. What are you doing that makes
>it worth the while of the state to spend over one and a quarter million
>on you?

Those are pretty much the sort of calculations that went through my head once I stopped to consider what it must be costing them to run this little operation.

The partial answer is, there have been periods when the intensity has been greater, and times when little has happened. In fact, for much of 1993 and the first half of 1994, very little happened. Although I don't think that was for reasons of money - if they can tap into the taxpayer they're not going to be short of resources, are they?

The more complete answer is in the enormity of what they're doing. When countries kill their own people, as a rule, they get found

out and all hell breaks loose. This isn't some para shooting
Irish teenagers in the back. This is something which permeates
English society, which they are ALL responsible for, and which
they cannot escape responsibility for.

Relative to the cost to British pride of seeing their country
humiliated for the persecution of their own defenceless citizens,
isn't is worth the cost of four or five people to try to bring
things to a close in the manner they would wish? To the
government a million or two is quite honestly nothing - if they
can convince themselves of the necessity of what they're doing,
money is not going to be the limiting factor.

>>What possible reason? I guess because they think it's amusing to do
>>so.
>
>What? Spend a quarter mil. a year to amuse themselves? And why not
>change every now and again? Why keep watching you? (Unless you _are_
>doing something, and I don't think you are, though you may have some
>deep, dark secret in your past.)

See the above.

==========

>>I'm going to try to rationalise what you're telling us. I can think of three
>>possible explanations for what you are experiencing.

>>Another possibility is that you are developing some kind of paranoia. There's
>>no stigma attached to this; we're all paranoid to some extent, although
>>perhaps not to the extent that a doctor would call us paranoid. I think
>>paranoia is quite a straightforward explanation here - you really do believe
>>that all these things are aimed at you; you see people everywhere trying to
>>get at you. Logic suggests that this cannot really be the case.

>I think the evidence leans towards this explanation myself. Why not
>try soc.support.depression and see what some of the people there have
>to say about this? Just to get some more perspective on your perspective,
>so to speak?

Sure, it "leans" towards it. But please at least admit there is a
POSSIBILITY of it being very real. And once you've done that, can
you come up with some thoughts on methods of proof? I may be missing something
in my assessment - there may be a way of proving it, in the face of non-
cooperation from the "players".

>Hmmm, strange eh.
>I mentioned all this goings on to my boyfriend, who works for the
>British intelligence service, and he assures me this sort of thing
>never goes on.. not ever...honest.
>Though he said the name was familiar...

it does go on, although it's an open question who does it.

Some time ago there were press reports of an Army intelligence person
called Jones who claimed Diana and Hewitt had been photographed in a
compromising position... he said he'd been doing this as part of an
Army unit which had previously operated in Northern Ireland.

Then Hewitt said he'd been told the same thing by some Army people,
and that they were threatening to release the tapes unless they
curtailed their liaison... as per usual everyone denied everything,
painted Jones as the "Jones twins" - not very original in how
they deal with their perceived enemies, are they?

You have to wonder how they manage to achieve this sort of surveillance though. Audio you can understand, it's possible to put a microphone through the wall, and apparently there exist devices which will retrieve sound from a laser beam bounced off a window - sounds sci-fi, but there's a well known surveillance electronics company in London which sells these things.

But how would you get video out of a room, unless you had actual physical access in order to plant a device for pickup? We're not talking about looking in from afar, but an actual device within the room. You could either drill through the wall and shove a pickup through; or you could supply a trojan device with a hidden pickup inside; but most likely, you would have to physically break into your target room to plant a camera. That's not an infeasible option; all it means is having your target(s) watched to make sure they're not in the vicinity, then you negotiate any locks on the property and find a suitable receptacle for your device.

The next question is how they defeat the usual methods of counter-surveillance. We had private detectives carry out a "sweep" of every room and the telephone line. They found nothing. That indicates at least four possibilities that I can think of; (this is all guesswork BTW, and probably fanciful guesswork at that!)

1) no bugs (pull the other one)

2) radio-transmitting devices which can be controlled from an external source, ie you can instruct them to switch off when you detect a counter-surveillance sweep taking place

3) hard-wired devices; probe microphones or whatever they're called, things you poke through the wall

4) passive surveillance devices; so you bounce laser or radio waves off a suitable reflecting surface (again, sounds far-fetched but such things may apparently exist).

5) there is a fifth possibility, that the PI's didn't detect an actual transmitting device; there are technologies specifically designed to avoid detection, eg frequency hopping and suchlike. But how much sophistication could you build in to a device which would have to be small enough to be physically concealable?

I guess the real question is to find out who is ultimately behind these "goings on". And if the "great and good" (or the better known, at any rate) can't protect themselves, what hope is there for the rest of us?

Thanks for providing that link! Now that I see the ad, I also remember
the product. Never owned it, though. It would be cool to hear recorded
speech from it.

Anders

Hey all! I've put my old oscilloscope and alignment disk up on Ebay. I need
the cash! This pair is great for aligning those old 5.25" disk drives.
Check 'em out!
http://tinyurl.com/34dh47

Thanks!
Momo

Due to having nothing better to do (currently looking for work), have
made slight update to my Windows ATASCII file viewer, so it now
supports the international character set as well as the graphical one.

Welcome to the comp.sys.atari.8bit newsgroup!
Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE Game System.
Atari, headquartered at the time in Sunnyvale, California, USA, produced this
line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986, as part of the Great
Renaming, as a direct replacement for net.micro.atari8.

Former (before 1987) Usenet newsgroups for Atari computer discussion:
  net.micro.atari8 - created Feb 1986
  net.micro.atari - created Nov 1982
  net.micro   - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

Hi,

I was wondering if there should be a section for 8 bit sightings in tv
or video.

I found a 1200xl in this 80's music video for Donny Iris (Ah! Leah!
fame) video called 'Do You Compute'

http://www.youtube.com/watch?v=uIN5q96-w4s

Its a hilarious low budget video, but shows some text modes of the
Atari Computer. Slightly catchy tune too.

Any more sightings for 8 bit stuff?

Rory

yea that would be cool. not just atari, but other 8 bit machines as
well.

Wow! It's been like 5 years since I've heard anything from him. He's a nice
guy, I'm sure it's an oversight. Something may have happened you never know.
Is RTDOS finished yet? 8)

Was wondering if anyone has any idea of about
how many Atari 8-bit Active Users there are in the
USA and World Wide?

Also, is there any type of paper or disk based
Atari 8-bit Magazine in the US or elsewhere?

The company that owns this page: http://www.suncom.com

Is that the same as the 1980s company called Suncom, maker
of joysticks?

Anders

Hehe, whats in the SEX.DO file on the 102? lol....
Nice stuff, I hope that's a reflection of a tree in the 102's screen and not some kind of deformity. Good luck!

No...their company bio says that they were founded 7 years ago.

I did a little digging, and it appears that Suncom continued to make joysticks up until ~2001 or so, when they got bought out by another

company. Their website (which was www.suncominc.com) and employees
subsequently disappeared, and I see no retailers still selling their
products. Looks like they're gone for good. Too bad....I absolutely
loved the TAC-2 controllers.

Drac 030 has a Atari 65XE with running 65816, includig a patched XL OS to
support the 65816, and lot information on this on his homepage

http://drac030.krap.pl/en-main.php

I can only tell about the Atari Bit Byter User Club, around 380 Members
(mostly in Germany, Austria, Switzerland, Netherlands, some in the US).

ABBUC is publishing a quarterly Magazine (30 Pages print in colour and 2 MD
Sites Diskmag), and two "special" magazines each year.

As the mag is in german language, we're looking for volunteers to help us
translating parts of the mag for the english atari 8bit community.

see http://www.abbuc.de/index.php?newlang=english
for more information

And some other scanning I did recently, while I was using Creative
Computing to fill in many gaps of info in the early history of the 400/800
for the FAQ.

UPDATES SINCE PREVIOUS POSTING:
2007.01.21 removed: HARD Software (web site gone)
2007.01.21 updated: Foundation Two
2007.01.21 updated: Digital Force
2007.01.21 renamed/moved Jan Detlev to The Atari Shop
2007.01.10 added: Krishna Software
2006.12.31 preamble, update my email address
2006.12.14 Radek Sterba, Raster Music Tracker (RMT) v1.25
2006.12.10 More Than Games, "SPEEDIER:" 19.2K RS232 adapter

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Hey All!!! If you even remember me??? LOL

First of all, to answer your question....

I don't consider myself to be an actual active member of the 8-bit community... but I DO maintain a strong interest in 8-bits as well as 2600 and also several of the classic systems of that era. I have faded in and out of the newsgroup over the last several years BUT, as I said, I DO maintain a strong interest in this system!

(Re)-Intro of myself...

I am known on the net as Nite Hacker and you can find me at yahoo using the handle and add 38 to it. For obvious reasons, I am not going to post a direct-link here and/or mention my real name! A FEW of you, if you are still around, may already know or remember me... BUT I have a strong feeling that MOST of the ones who knew me are NO longer around here!!! :-(

I started 8-bitting around 84 with a Vic-20 and then about 2-3 years later, I graduated to an 800XL system. I eventually joined an 8-bit group, NWPAC, which at that time Dale Wooster (previously well-known in the 8-bit community) was president and which eventually folded a few years later (circa 1998?). I don't remember as it's been so long ago now!

However, I had bought an 8-bit BBS setup and had started operating it myself (circa 1996?). I had previously been logging onto other bbses aka Super MarioBros, MarioBros and Nite Hacker. I ran the Iron Horse BBS for about a year and 1/2 or so until it had a fatal crash as Nite Hacker. During that time, the PAUGS BBS (ran by the NWPAC user group) also went out of service and ALL the equipment and stuff was handed over to me at that time as they wanted me to host their BBS on mine until it crashed.

It is with VERY sad regret that I have since lost ALL of my 8-bit stuff including the Iron Horse and PAUGS bbs when my storage unit, which I couldn't keep up the fees on it, was sold at auction.

I wonder if whoever bought it actually knows what they got!!!

I really regret it now since ALOT of the history of these 2 bbses may ALL be just a vapor now!!! ;-(

Nite Hacker

A lot would depend on what you call 'active'.

Daily use?

Occasional use?

"the come out of the box every so often just to play"?

I'm in the occasional use. My 256k XL is hooked up, and I've bought several of the cool toys from Atarimax. I just wish I had more time to play around with it!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE Game System. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:

- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board (B8MB): http://www.big-8.org/

Wikipedia article on Usenet: http://en.wikipedia.org/wiki/Usenet

Man sorry to hear that. I had a friend that was about to loose a storage unit and he made sure to pass along the Atari stuff before he let it go. We might have even broke into the unit. :D Looking back I think we might have an he didn't let me know. Yahhh...

Well, as for how many Atari users still exist in the world, I'd sayyy... Hmmm... maybe in the 500-600 range that have the Atari's setup on a desk that they play games on, program, call BBS's with. Or at least sit on a desk.

Probably at least 5,000 that have an Atari computer that they hook up a few times a year to play games.

And many more thousands that have Atari's in a garage or attic with the intent to do SOMETHING with that old Atari computer one day...

Atari 800 parts received...

RTDos wanted me to post a message that I got the Atari 800 parts that he had
advertised to ship to some happy home.

Now if anyone is interested in some of these parts, let me know and maybe we
can work something out. drclu@swbell.net. Mention Atari in the subject line.
;)

Hi,

I think I found a forum with alot of wisdom about Atari.
Maybe you can help me with a question from a quiz.
I'd like to know how many gametitles were released for Atari's 8-bit gameconsole?
I got four choices: more then 90, more then 900, more then 9000 or more then 90,000?
Anybody who can help me with the right answer?

thanx

Paul

According to this wikipedia entry

http://en.wikipedia.org/wiki/Commodore_64

circa 10,000 games were released for the C64.

My answer to your question is that more than 900 were released for
the Atari 8-bit series.

Anders

I say that looks correct. The C64 had a bit more games than the Atari 8-bit,
but it certainly more than 900.

GameBase64 has around 19000 games ready for download for the C64.

Which does not change my conclusion that more than 900, but less than
9,000, were release for the Atari. I mean, for the great Atari. The great
Atari that we all remember as the finest home computer ever made. Well,
at least we fujilogo worshipper think so.

Thats really not that much, I mean, a _1400XL_. Snipers suck but hey, better
bid what your willing to pay up front, and let the snipers take a chance.

Has this machine changed hands much? I mean is this a known 1400xl in the
community?

I've got an Atari PC-1 that I think pretty sweet...

Charlie

Got it from a guy in Germany, think he's a frequent poster. Did not work,
sadly, but he said that it was sold as is. Don't know if it's worth the
effort to try to repair it, nobody here in Norway is capable I think.

Take Atarian care

I seem to recall quite a few 1400XLs made it out, probably dozens. I
think B&C sold them about the time Atari was having warehouse sales
circa the late 1980s.

The B&C price was nothing like $3000 of course. I think maybe around
$150 or so.

I take everything I see on eBay with a grain of salt. I have seen sales
where the feedback was entered within hours of the auction close. Just
no way the item to be paid for, shipped, and received in the time available.

Apparently cheaters do this for several reasons. They inflate the price
for people that use the 'completed items' to check what stuff sells for
and they effectively keep merchandise that they don't want to let go
below a certain price point rather then use the official eBay reserve
price option.

They could even be drawing people out of the woodwork. For example
someone seeing that $3,000 price may search through their closet for
their old Atari stuff and put it up for auction.

Rick

There was 'Adventurous Programming' in
ANALOG (about 39,40,41) for creating
text adventures, by Clayton Walnum.

I thought that the 1400XL was even sold commerically for awhile, but it
turned out to be a bit flakey, so people were returning them and stores
started just throwing them in the garbage. People were grabbing them out
of the garbage and returning them again, so the stores started taking the
silver name strip off the front (explaining why most of the ones you see
are missing it.)

Any truth to that I wonder?

The 1450XL just saw light of day as engineering prototypes that some atari
employees got (IIRC)

How do they get out of paying the final value fee on that? Or do they just
pay it, as a part of doing business ?

There were several.

There was also the Adventure Creator cartridge (by Spinaker IIRC).

The Codeworks product was called "The Adventure Master" -- fairly hard
to find.

Unfortunately, the "Adventure Construction Set" was never ported to the
A8.

I don't recall "The Slave" -- do you have any further info about it?

Not sure but I assume they claim a non paying bidder.

It cost $5 insertion fee and maybe $65 final value
fee. About $70 to sell $3090, plus shipping, which
the buyer pays anyway. About 2.5%
Many sellers charge shipping and handling, which

covers the selling fees, and doesn't get added to
the final value fee. This auction was for actual
shipping cost, however.
I don't think the seller would claim non-paying buyer.
That would involve somehow trying to say the
buyer didn't pay, if payed with PayPal or credit
card, there's proof it was paid.

Hi,
Sorry, I know it is not A8, but I need to ask a bit of a newbie question
relating to the 2600.
Simple enough - do NTSC games work on a PAL console?
Cheers,
Paul

What I think happens in some cases, not necessarily this one, is the
seller *is* the buyer with just another eBay ID/computer. He just never
clicks the paypal button to pay himself and claims buyer never contacted
him or sent payment.

The cartriges are interchangeable. I've used PAL carts on my NTSC 2600
no problem, but you will have issues with how the game displays on the
TV.   I could not get the vert hold to sync with PAL cartridges.

Kev

It looks a bit strange to see the text "comp.sys.atari.8bit" in
the "From" field of the message. Why do you call yourself
that?

Anders

And I think there's issues with color. Superman was not having the right
colors on his outfit. Smurfs are green or something, don't remember, but
wrong all the same.

   On Wed, 3 Jan 2007 at 22:13 -0500, Jack Tseng scribbled:
->Indus RAM Charger CP/M Boot disk cant boot in my Indus GT... Anyone
->explains how to do that?

   1) Does a regular boot disk (i.e., some other version of DOS) work
in that same drive? (Just to make sure the drive works.)

   2) Is the extra 64K memory board installed in that drive? An
"ordinary" Indus (without it) won't run the CP/M program.

That's true.

It was marketed by CBS if the screen shots I have are correct.
The title screen says "by Christopher Chance" and "(C) 1984".

> Unfortunately, the "Adventure Construction Set" was never ported

Yes I forgot about colours.   I rem Popeye (PAL) was coming out black
and white on my NTSC 2600.

I would stick to NTSC games on NTSC 2600 and PAL on PAL to avoid
headaches.

I seem to recall hearing about MyDOS on a cartridge once.

Does an image exist?

How about source code?

I'd love to see MyDOS 4.50 on a cartridge.

Regards,

Steve Sheppard

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

RELATED NEWSGROUPS:

Has anyone seen the movie / cartoon Monster Hause by speilberg and
zemeckis who did Back to the Future? There is a seen in the movie
where one kid calls the other kid and this other kid is playing Atari
Video Olympics (Pong) with sound effects from Combat for the 2600.

Pretty interesting, huh?

http://www.rtdos.com (wiki)

http://rtdos.com/mailman/listinfo (email lists with mail2news gateway)

school just started so i'll need help adding content to the wiki; my
goal is create an encyclopedia of retro gaming console and retro pc
knowledge (esp. programming) but from a joint community effort (hence,
the wiki); because the retropedia can be used as a portal, i've added
chat, message boards, the ability to check email and newsgroups (nntp)
messages as well as personal journals (blogs), etc.

hopefully this addition to the retro community will benefit all users
of all systems; i'm still learning the ropes of hosting a wiki (and
managing the tiki) so any and all suggestions, comments, and even
criticisms are welcome.

That seems impossible. The ST had midi ports, the A8 didn't. How can you have a midi player without a midi port? Unless you're asking if there was a program that could decode a midi file and play it with the A8 sound chip. Very few midi files are monophonic, or even quadriphonic, but multi-timbral and multi-phonic, many instruments, many voices.
There were a few music formats for A8, probably the AMS files the most common. An AMS file could play four voices, but only one patch or sound. There were also some programs that could do digitized sound, like Parrot, but it was pretty poor sampling rates, like 8K or so.

I'm a little ignorant about midi: Isn't it just 38 kBAUD serial data
similar to SIO?

There's a lot of stuff I don't know like does it have to be 2 way
communication?

Nah, but if you want to play around I would get a MidiMAX. I just got one
from Best Electronics last Friday. I've been playing with it all weekend.
I've got it hooked up to a Roland MT-32. Sounds great for a cheap little
synth being driven by an Atari 8 bit!. I've never done any MIDI what so
ever, I'm not even a musician, and I've been able to get some sounds goin!
I've been converting AMS music files to play on the Midi Music System
software. The same programmer wrote both "Midi Music System" and AMS, Lee
Actor! And he wrote a utility to convert AMS -> MMS !

Man, the AMS was a great system that really showed off the 8 bit; wasn't
there a SID hack to add the SID chip to the 8 bit ?

Right, midi is a serial data, I think 38K baud is correct. It doesn't have
to be two way communication, but customarily has a midi in and a midi out
port, two cables, one for recording, one for playback. MIDI has its' own
protocol, most data is note on, duration to play (note off), sorta like
printer codes. MIDI also has pitch bend, patch selection (127 standard

'instruments'). A cheap MIDI keyboard will have 16 'voices' at one time,
and 8 or more instruments (patches). Some MIDI instruments have 'system'
codes, that will allow adding your own patches.

But didn't the Amiga (or later ST/TT's) have a midi through port ?

And were the midi ports (or can they) be used for other than midi ?

Oh by the way, if anyone has a copy of "MidiTrack II" laying around I sure
would like a copy :)

I think you may be right, some ST/TTs had a midi thru port.
I'm sure midi ports can be used for other things, especially if Rick Cortese
gets hold of one, but I've never heard of it.

OK!

Sounds like you could send the info through a joystick port. I did a
reverse hack of an MMP modem and got a J/S cable to work as an RS323
port with the MMP software.

I also did some ML/BASIC code for blind sending files for transfer to a
RS2323 interface like an IBM or ST. I know I got it up to 19k send.
Pretty sure I could have got it faster if I needed to. No handshaking of
  course so it would probably over run a Midi instrument buffer without
something to pace it.

Makes me wonder if MidiMate was just an RVerter type device with POKEY
set up for 38k BAUD. If that is right, you should be able to just make
an adapter from a SIO2PC cable and run it with the MidiMate software.

Rick

I didn't know Roland made any 'cheap little synths'. I remember playing
with MIDI programming
in Microsoft QuickBASIC 4. I was able to get the computer to play some
notes sending out to
my CASIO CTK 711EX synth. I was trying to be able to send new patch info.
My first experience with MIDI was with the ST and Dr. T's MIDI software to a
Casio CZ-100
keyboard. I believe it played up to four notes at a time, polytimbral (4
patches) or 8 notes,
monotimbral. There are probably 100s of thousands of good MIDI files, just
about any
tune ever written, sung or played.

Doesn't this look "similiar" to the adventure construction set that
came out of antic magazine?

I seem to remember that there was some kind of semi-automatic creation
system by Databecker (in German) that was part of the book "How to
write Adventure Games" (approximately translated). I've read this book,
but I don't think I have a copy left. It was all based on BASIC.

So long,
     Thomas

> But didn't the Amiga (or later ST/TT's) have a midi through port ?
Nope.

> And were the midi ports (or can they) be used for other than midi ?
Some games used it for multiplayer use e.g. MIDI Maze.

I wasn't knocking the MT-32, I actually 'researched' it a bit before I bought one. I looked for a mid 80's, (contemporary to the 8-bit, plus I like the 80's synth sound) simple but capable, standard MIDI device. I meant cheap as just that, $50 bucks off ebay...I'm having a blast so far. Actually the documentation mentions the sample songs were intended to be played on a Casio with 4 voices, the AMS songs match up nicely for something like that.

Yesss....

But then again, Adventure Construction Set was inspired by Ultima I
anyway.

BTW, I loved ACS when it was published. Not only played the levels that
were submitted for Antic's contest but also made my own based on Zelda.
;)

Yes, why not share? If you have them, put them on a web somewhere, along
with the ACS. I would surely appreciate that!

Take Atarian care

Ok, you asked for it. This is just me, but I think maybe the automated response about a post to mailing list being sent to folks personal email addresses is a bit much. I mean, I'm posting here, not to a mailing list. I don't need a confirmation in my personal email account about your mailing list. Anyway, don't take it the wrong way.

Charlie

Ahh, vintage Roland. Probably pretty nice sound
out of it, I bet.

Rats, Miditrack III requires a 130XE. Miditrack II would work on my XL
though. So anyway, I'm still on the lookout for version II.

Charlie

I was interesting reading about the adventure creator utility
in a thread created recently.

My first reaction is that this is about programming of
text adventures with or without static graphics images
illustrating locations in the game.

The images from a game made with adventure creator program
that there was an Antic article about, look like something
in between a real time role playing game and a text
adventure. There is a section for text input on the lower

end of the screen.

I should know after having followed the scene of 1980s
home computing and video games, but honestly I don't: What
is the best way of dividing the adventure genre into
categories?

Text adventures ("Adventureland")
Text adventures with graphics ("Red Moon" and others)

What does "Alternate Reality" count as?

Did "Leisure Suit Larry" have text input? I think it had.

Anders

Hi all. I went to the parts store today and got everything I need for
the Clearpic 2002 but the '68pf' .

Can someone please reccomend a vendor, and possibly a part number,
where I can order online?

Thanks,
Charlie

> Text adventures ("Adventureland")

Well, this was also released as S.A.G.A., so it's also a graphic adventure.
Infocom is purely text based (well, there's a couple PC ones with graphics,
but not on Atari 8-bit)

> Text adventures with graphics ("Red Moon" and others)
Yes, as well as the S.A.G.A.'s, Level 9 had several. Also, The Pawn, Jinxter
and more

> What does "Alternate Reality" count as?
I'd put that under Role Playing Game (RPG)

> Did "Leisure Suit Larry" have text input? I think it had.
Yes, the early ones did, then they changed to point and click. Softporn
Adventure is really Leisure Suit Larry and with text only.

> Anders

Hi,
Happy New Year!!!

The UKretro.co.uk January sale starts today and runs until the 31st of
January 2007.

For the duration, Everything in our store is reduced by 20%

Simply add the items you want to your basket and on enter the word
'sale'
in the discount code box on the shipping address page of the checkout.
20% will automatically be discounted from your order.

Best Wishes,
Mike

I have been restrictive with letting my four years old
son play computer games. Tonight however, we
played Gateway to Apshai on a 600XL together.

It is quite difficult for a child to handle the Atari,
Wico et cetera joysticks compared with the game
controllers that became popular later.

Anyway, he found it exciting to locate hidden
traps and hidden doors.

I let him look while I played first. The next step was
to delegate the responsibility for pushing the
joystick button for attacks with the sword. You
should have seen the worried look upon his face
each time we were about to enter a new room.
What would wait for us in there? A rat? A bat?
Ghouls? Spiders?

Great game!

The stupid TV changes screen format when
the game toggles between contents/no contents
in the text status line below the moving graphics.

Anders

Dirk was on the West Coast when he got the call. An old
friend at the Toronto police department thought he would like
to fly up and take a look at a homicide which had occurred
the previous evening. He decided to skip the last day at the
World Holistics conference and take the next plane out of
San Francisco.

The flight was bad; Dirk had been hit on the back of the head
by the Newspaper trolley, the drinks trolley, the dinner trolley
and now the gift trolley. When the hostesses weren't trying to
tear his arm off they pestered him to stop leaning into the aisle
- ignoring the fact that the guy next to him was taking up one and
 a half seats. Air Canada used to be the flight which was so
good you just didn't wanna get off - on this occasion Dirk
would be glad to see the back of the plane and the over sized
alternative comedian wedged into the window seat.

After breathing in a couple of lungfulls of crisp Canadian air
Dirk took a taxi into town. There was a small group of
demonstrators outside the MacDonalds and the taxi driver
insisted on stopping on the opposite side of the street. 'Don't
Eat Meat' the placards read and the demonstrators chanted. A
couple of policemen where stopping the crowd entering the
restaurant itself - one held up his arm and challenged Dirk. A
wave of the fax he had been sent and the policeman pushed
open the door.

There were few customers in the restaurant. Not surprising
really with a demonstration going on outside, half the dining
area roped off with tape and a dead body seated at one of the
tables. 'Mr Gently sir' the officer in charge called out as he
peeled one end of the tape off a column 'We were told not to
touch anything til' you got here'.

The body of the man slumped awkwardly in a chair. Then
even a dead body would start getting uncomfortable in a
MacDonalds chair after twenty minutes - and this one had
been there for at least eighteen hours. Two back legs and the

tail of a cat hung out of the man's gaping mouth. Dirk turned to the officer, "I suppose you are going to tell me this is the darndest thing you ever saw?"

"Ain't this the darnd...". The officer seemed annoyed that Dirk had second guessed him. "We're removing the body in a few minutes, so if you can get through as quick as possible"

"Many people eat cats in fast food restaurants?" Dirk asked and without waiting for an answer leant over the table to pick up an untouched burger. "And what's this?" he asked waving it in front of the officers face.

"It's a Vedgie Burger" The waitress, who was cleaning one of the adjacent tables, shouted across. She walked over to Dirk. "We started doing them because of that lot out there" she nodded towards the protesters who were pressing there faces against the windows "They're called Linda McCartney Vedgie burgers - ever heard of them?"

Dirk suddenly felt faint, perhaps a combination of hunger and jet lag. "This is deja vu all over again" he thought to himself. He glanced at policemen - at the badge on his shoulder "OPD" but this wasn't Ontario this was Toronto. OPD - Officially Pronounced Dead. It dawned on Dirk what was happening, he knew what he would see if he looked out of the window. Sure enough, there it was, the Volkswagen Beetle parked across the road - number plate 28IF - 28 IF Paul McCartney had lived. And amongst the lyrics of the song blaring out into the restaurant he could pick out the words "I buried Paul". Now it was though Dirk was viewing the whole scene though a TV screen. This was conspiracy. Not -a- conspiracy, or -the- conspiracy, but just plain conspiracy.

"You look faint - are you OK mister? The waitress asked.

Dirk shook his head "Probably a bit hungry" Then to economise on dialogue took out a pack of cigarettes and held it out towards the girl. She was about to take one but Dirk snatched the pack away, held it up to his mouth and drew out two cigarettes. He lit both then passed one of them to the girl. It was the closest he had come to a sexual encounter in three months.

"Want a Burger?" the waitress asked.

Dirk looked down at the Vedgie Burger on the table. "No thanks - just a plate of fries"

The waitress walked away and Dirk looked around the room. Apart from a family seated in the far corner there was only one other person in the restaurant - and he wasn't eating. The guy was about mid twenties and had straggling, shoulder

length hair. On the table in front of him were lots of pieces of paper cut into squares. Every so often he would pick up a camcorder and pan it around the room and then, when he was finished, speak into a microphone which was attached to a tape recorder. Dirk walked over to where the man was sitting.

The small pieces of paper had paragraphs of text written on them and were stuck to the top of table with blobs of mustard. Lines had been drawn, some solid some dotted, on the table top with a marker pen. The lines ran from one piece of paper to another.

"What are the lines for?" Dirk asked, realising straight away that "What the hell are you doing?" would be more appropriate.

"You see" The man replied nervously "The dotted lines are weak links and the solid lines are strong links. The dotted lines are things which are happening in the rest of the world and the solid lines are things which are happening to me. Now you see I draw over a dotted line, replacing it with a solid line, when I can link something back to me. Like this" The pen squeaked over the Formica and before Dirk could interrupt the man added. "You see I lost my short term memory and, as a consequence have a very short attention span. I write down, record and film everything then put it all together later"

"So" Dirk interrupted. "You filmed what happened here?"

"Yes, yes, it's here on this tape" The man pushed the cassette across the table. On the label the words "Grassy Knoll" had been crossed through and replaced with "MacDonalds".

Suddenly the man sprung from his seat. Dirk turned and saw that the body was being removed on a stretcher. As it passed the man picked a small object off the edge of the stretcher itself. "This is important" he said, laying a blood stained bullet on one of the small pieces of paper on the table.

Suddenly the room was filled with a deafening throbbing sound as a Black Helicopter landed in the street outside. Two men in United Nations uniforms got out and collected the stretcher. Back at the table the long haired man was replacing all the dotted lines with solid ones. Dirk panicked and began to walk backwards at some speed. Barging through the swing doors he stumbled into the kitchen, tripped and felt himself sink slowly into a large vat.

"The guys fallen into the batter" Dick heard someone shout before he sunk below the surface. He came to sitting in a chair with the batter solidifying all over his body. He surveyed the room through two eye-holes someone had cut. Suddenly the chair on which he was sitting was picked up carried through

the restaurant and out of the building. As the chair was being lifted and put into the back of a van, Dirk caught a glimpse of the waitress following him. "Your fries mister, your plate o..."

The doors of the van shut and Dirk tried desperately to steady himself as it sped across town. Eventually the doors flew open and Dirk was flung into the road at which point the solidified batter shattered and set him free. Standing up he found himself outside the international departures terminal of Toronto airport.

In the departure lounge Dirk had time to reflect on the day's events. He had got caught up in the conspiracy theories and the haphazard welding together of pieces of irrelevant information. It was time to catch the person who was operating the bizarre cognitive engine which appeared in front of him like a fairground mirror, distorting any flaw it could find in his own, fragile, map of the real world.

Dirk leant into the aisle of the plane as it took off for London. The oversized person next to him swung his arms violently as he complained about every thing from the supper in a plastic tray to the state of British politics. With a shaven head and a badly fitting suit the man looked as though he could have worked behind the reception desk of the Kremlin. However when he spoke he did so in a Liverpudlian accent. "Me I blame the Con-serv-a-tive government, me. The Tour-rees. That-cher. Me. They need a good kicking" He jerked his feet forward and struck the seat in front with his Doc Martins. "With these. Me Doc Martins. Doctor Martin's, Doctor Martin's, Doctor Martin's Booots!" The phrase was now being sung over and over again as the man writhed in his seat and clicked his fingers.

Dirk looked down at the boots and thought of the reaction most people used to deal with the paranoids at the end of the wire. A nice quick kick. "Oi nutter - get some therapy". This is the easy way out and perhaps the safest. After all there you are sat, alone, in front of the screen. No body language between you some paranoid. No way of telling if he really is some gibbering psycho. Look at it too long and you be drawn in. Fall into the tangled database of weird links with him. Who knows he may be watching you, reassembling and linking your experiences with his. How sure are you of you own cognitive threads. After all cognition is only a bug fix for a neurological system which was designed in a hurry - it's abused by everyone from politicians to advertisers. If people really can convince each other that a bottle of washing up liquid is as exciting as an orgasm using just television God knows what they can do with a computer. Better to avoid the risk. A swift kick. After all if you're Homophobic you put the boot in because you are scared of any ambiguity in your own sexuality

- why not be Nutterphobic as well.

Although Dirk would have liked to devoted time to tracking the culprit down he decided to let it rest. The Internet changed over the next twenty odd years. A lot of the people who used it went out and got lives. And those who already had lives burnt them away. The number of users had dwindled after someone had invented a C++ program, with truth as a variable, to deal handle politics and government. Dirk had already retired from finding old ladies cats with the help of obscure science when he got another call from Toronto.

It was 4th March 2025 when he booked onto the Air Canada flight from Heathrow. The silver haired woman in the seat next to him painted bright red lipstick around her mouth. "Of course it was no surprise to be offered the job after Claire Raynor retired" she sneered" After all I used to be a psychiatric nurse... Now if Blokes had periods they would understand..."

By chance the taxi ride to Toronto mental hospital took him past the MacDonalds - where the whole thing had started. Of course it was barely recognisable having become a Church Of Scientology Vedgie Bar. Police in riot gear kept the two sets of demonstrators apart. Dirk didn't really know what to expect when he got to the hospital. The girl at the reception desk directed him to a row of chairs in a wide well lit corridor. There was a strong smell of disinfectant, the furniture and the carpets were immaculately clean and behind the rows of teak veneer doors the "nutters" were all safely locked away. For some reason Dirk started thinking about CompuServe forums.

A tall blond woman in a white coat approached. "Mr Gentle, I assume"

"Yes" Dirk replied shaking her by the hand. "You're the nurse who..."

"Doctor" She interrupted, "Doctor Killfile" She led Dirk across the corridor towards one of the doors then stopped with her hand resting on the handle. "Now you know about this person don't you?" and after Dirk nodded she continued "Don't tell him anything about yourself - don't let him get into you head. If he does he'll screw it up"

The door opened to reveal a frail man sitting in from of a TV screen. He had a keyboard on his lap and next to the television was a computer screen. Dirk glanced at the walls of the room and remembered that his settee at home need upholstering. The nurse left the room and the man looked up "So you come to my daughters wedding and ask me to kill a man" he said in a dry cackling voice. "Look" he continued, pointing at the

screen, "I know that man. They're talking about me now - listen". The man stared at Dirk. "What's your name? Are you one of my friends from the Internet? - Are the lambs still screaming Dirk?"

Dirk, at first recoiled in horror, then felt a sense of anti climax. So this is what they hyped up to superstar status on the back of their own fears of madness. Dirk was reminded of the film "A day on The Beach" where a submarine had set off to search a post nuclear World to track down a signal coming from a remote military base - only to find it was being sent by a Coke bottle half balanced on a Morse tapper. Outside the room the nurse waited for him. Because his nicotine craving had returned - and to avoid an awkward piece of dialogue - Dirk turned to her and asked . "Patch?"

Dirk took two nicotine patches from his wallet the first of which he stuck onto the inside of his arm. Stepping closer to Doctor Killfile he opened her white coat and slid his hand into the opening at the front of her dress. He pressed the patch onto her leg as close to the top of her inner thigh as he dare. She took a deep breath and then slowly breathed out. "What Bogart could have done with these things" Dirk thought to himself.

"Is he crazy?" Dirk asked tilting his head back to towards the door.

"Who knows" Doctor Killfile replied "We let him type away. He sees something on the TV in the morning and it keeps him busy all day. What he types doesn't go anywhere it just stays on a mainframe in the basement. It can be read by anyone else in the building but that's it. We got them all in here conspiracy theorists, racists, nationalists. They've created a world within a world really..." Her voice trailed away and she stared down the corridor for a while then added "So long are two things are different neither will come to be in the other and so become at once both one and two."

Dirk gave her a puzzled look "You mean their brains are fried?"

"Fried?" Killfile smiled at Dirk "No that was Plato". Then the smile fell from her face. "You must remember, mister, plate o..."

I used to love that game. That and Temple of Apshi. You are doing well,
my 4yo is hooked on Lego Star Wars;-) He was showing an interest the
other day in my modded 600XL. Maybe it is time to bring him to the light
side;-)

Mark

Hey, it's pretty cool that you are getting the next generation familiar
with the classics. If I ever get off my lazy duff, I'm going to make a
module for either NWN2 or Oblivion that is based on the Apshai series.

There isnt a huge market, but its there.

Many people just donate their 8-bit stuff to 'collectors'. I've gotten a
few items that way. I know if i have them they will be well cared for
and see daylight (and AC power :)) every so often.

Eventually i hope to have the space to bring everything out at once and
leave it out. Sort of like that museum in that barn out west.

Mike Corley FAQ
version 0.1
first edition 5th May 1996
last updated 5th May 1996
Iain L M Hotchkies iain@XXXXX.demon.co.uk

Mike Corley is a 'net personality' who has been active on the following
newsgroups (uk.misc,uk.legal,uk.politics,uk.media,soc.culture.british)
since....? Well, at least as far back as the summer of 1995.

He posts long tracts, the tone of which approximates that which one
might expect from a reasonably intelligent paranoid schizophrenic.

No details are known of Mike's 'real' personal life or background.
Once would presume that he came from a reasonable family and was
reasonably well educated before the first symptoms of schizophrenia
began.

Schizophrenia: Clinical features
(from the Oxford Textbook of Psychiatry, 2nd Edition)

The acute syndrome

Some of the main clinical features are illustrated by a short
description of a patient. A previously healthy 20-year-old male
student had been behaving in an increasingly odd way. At times he
appeared angry and told his friends that he was being persecuted; at
other times he was seen to be laughing to himself for no apparent
reason. For several months he had seemed increasingly preoccupied

with his own thoughts. His academic work had deteriorated. When interviewed, he was restless and awkward. He described hearing voices commenting on his actions and abusing him. He said he believed that the police had conspired with his university teachers to harm his brain with poisonous gases and take away his thoughts. He also believed that other people could read his thoughts.

This case history illustrates the following common features of acute schizophrenia: prominent persecutory ideas with accompanying hallucinations; gradual social withdrawal and impaired performance at work; and the odd idea that other people can read one's thoughts.

In appearance and behaviour some patients with acute schizophrenia are entirely normal. Others seem awkward in their social behaviour, preoccupied and withdrawn, or otherwise odd. Some patients smile or laugh without obvious reason. Some appear to be constantly perplexed. Some are restless and noisy, or show sudden and unexpected changes of behaviour. Others retire from company, spending a long time in their rooms, perhaps lying immobile on the bed apparently preoccupied in thought.

The speech often reflects an underlying thought disorder. In the early stages, there is vagueness in the patient's talk that makes it difficult to grasp his meaning. Some patients have difficulty in dealing with abstract ideas (a phenomenon called concrete thinking). Other patients become preoccupied with vague pseudoscientific or mystical ideas.

When the disturbance is more severe two characteristic kinds of abnormality may occur. Disorders of the stream of thought include pressure of thought, poverty of thought, and thought blocking. Thought withdrawal (the conviction that one's thoughts have been taken away) is sometimes classified as a disorder of the stream of thought, but it is more usefully considered as a form of delusion.

Loosening of association denotes a lack of connection between ideas. This may be detected in illogical thinking (knight's move) or talking past the point (Vorbeireden). In the severest form of loosening the structure and coherence of thinking is lost, so that utterances are jumbled (word salad or verbigeration). Some patients use ordinary words in unusual ways (paraphrasias or metonyms), and a few coin new words (neologisms).

Abnormalities of mood are common, and of three main kinds. First, there may be sustained abnormalities of mood such as anxiety, depression, irritability, or euphoria. Secondly, there may be blunting of affect, sometimes known as flattening of affect. Essentially this is sustained emotional indifference or diminution of emotional response. Thirdly, there is incongruity of affect. Here the emotion is not necessarily diminished, but it is not in keeping with the mood that would ordinarily be expected. For example, a patient may laugh when told about a bereavement. This third abnormality is often said to be highly characteristic of

schizophrenia, but different interviewers often disagree about its presence.

Auditory hallucinations are among the most frequent symptoms. They may take the form of noises, music, single words, brief phrases, or whole conversations. They may be unobtrusive or so severe as to cause great distress. Some voices seem to give commands to the patient. Some patients hear their own thoughts apparently spoken out loud either as they think them (Gedankenlautwerden) or immediately afterwards (echo de la pensee). Some voices seem to discuss the patient in the third person. Others comment on his actions. As described later, these last three symptoms have particular diagnostic value.

Visual hallucinations are less frequent and usually occur with other kinds of hallucination. Tactile, olfactory, gustatory, and somatic hallucinations are reported by some patients; they are often interpreted in a delusional way, for example hallucinatory sensations in the lower abdomen are attributed to unwanted sexual interference by a persecutor.

Delusions are characteristic. Primary delusions are infrequent, and difficult to identify with certainty. Delusions may originate against a background of so-called primary delusional mood - Wahnstimmung. Persecutory delusions are common, but not specific to schizophrenia. Less common but of greater diagnostic value are delusions of reference and of control, and delusions about the possession of thought. The latter are delusions that thoughts are being inserted into or withdrawn from one's mind, or broadcast to other people.

In acute schizophrenia orientation is normal. Impairment of attention and concentration is common, and may produce apparent difficulties in remembering, though memory is not impaired. So-called experiences result from illness, but usually ascribe them to the malevolent actions of other people. This lack of insight is often accompanied by unwillingness to accept treatment.

Schizophrenic patients do not necessarily experience all these symptoms. The clinical picture is variable, as described later in this chapter. The table below lists the most frequent symptoms found in one large survey.

The most frequent symptoms of acute schizophrenia (World Health Organization 1973)

Symptom	Frequency (%)
Lack of insight	97
Auditory hallucinations	74
Ideas of reference	70
Suspiciousness	66
Flatness of affect	66

Voices speaking to the patient 65
Delusional mood 64
Delusions of persecution 64
Thought alienation 52
Thoughts spoken aloud 50

Various theories exist about Mike Corley:

1) he exists and is disturbed and has net access and for reasons uncertain spams a selected number of newsgroups on a regular basis - if you are reading this FAQ then you will almost certainly have seen one of his posts.

2) Mike Corley is a 'virtual schizophrenic'. Mike displays the relevant features so well that some people think he may be a construction of one or more people with intimate knowledge of mental illness and the mentally ill. Perhaps they wish to monitor the effects on the internet of the posts of a schizophrenic. Moving into X-Files territory a bit, ourselves, here.

Mike's posts attract different responses:

1) cruel, humourous, dismissive posts from those who've seen his posts many times and have become generally irritated by his behaviour while accepting that he probably has a mental illness.

2) posts from Corley-newbies - those who have come across relateviely few of Mike's posts. These may be humorouous or disbelieving.

3) posts from people who have been sucked in (for one reason or another) into Mike's Wild & Wacky World (TM)

That's enough for now.

Persecuted by the Security Service

Since June 1990 the British security service MI5 has waged a campaign of harassment against a UK citizen,
through the broadcast and print media, verbal abuse at work, and molestation in public and during travel.

Despite widespread knowledge of the campaign in the UK and discussion of its characteristics on Usenet for
over three years, it continues today both in Britain and North America. Its cause and basis is xenophobia
on the basis of the genetic accident of mental illness, coupled with discrimination against an inferior
"foreigner" whom they condemn as "not up to British Standards".

If this is your first visit to this site, please read the FAQ first. Feel free to contact the author with
any questions.

Frequently Asked Questions article outlines the parameters of the persecution. Who is involved, and why?
What technical and social means do they employ? What response have I made, and why has their campaign yet
to be exposed?

The UK Security Services which are believed to be behind it all. Domestic security is the province of MI5
while the secret intelligence service MI6 combats foes (and its former employees) on foreign shores.

Usenet archive chronicling the (sometimes very enthusiastic) exchanges which have taken place on UK-local
newsgroups since May 1995. Make your mark on the continuing discussion!

Believe it or not, a few items of evidence have been recorded. Although none of them is particularly
conclusive, by presenting them I hope to explain what I understand from some television and radio programmes.
Most of the "clinching" material was aired in 1990-92, and no recordings exist now, which is quite unfortunate.

My complaints to the BBC and MI5 (via the Security Service Tribunal and Interception of Communications Tribunal),
and their response to my challenges, are recorded here. Basically they deny everything, they have put their
denials (mostly - Buerk and Lewis refused) in writing, and I don't believe them. Part of the website also
documents media coverage of my campaign to expose the persecution.

Faxed articles to, and responses from British organisations including Parliament and UK media. Over 24,259 faxes
in all were sent from 1998 to 2000. Their aim was to boot discussion of the persecution into the public domain,
and that aim was not accomplished.

20,000 Reward Offered to Expose the Conspiracy

I am making a pledge for information directly leading to the exposing of the "BBC
Newscaster
Conspiracy". The exposing would specifically need to lead to a legally binding
admission from Martyn Lewis
or Michael Buerk of the BBC they they were watching me through the TV set.

I would be happy (delighted, in fact) to pay GBP 20,000 sterling in reward for the
above admission.

For my sins I had a look and it's quite good actually. Nicely set out and presented. Didn't read it though, having read the rants a million times before. By the way, anyone noticed Chris Tarrant looking at you funny during Man O Man yet? Thought not...

Now, whatever you might think about the content, this is a very well
designed and presented web page (if you use Netscape to look at it
anyway - Mosaic couldn't handle it).

This is my article, not my employer's, with my opinions and my disclaimer!

Despite an orchestrated campaign of attempted censorship by UK-resident newsgroup
readers, TFN did not bow
to demands for a suppression of freedom of speech. TFN general policy on the
matter is as follows;

Draft Policy on Account Deactivations due to News Group Postings

News group postings occasionally take the form of a message which goes against the "topic" of the conference.
For example, a derogatory message about Canadians in the soc.culture.canada.

Members of such news groups then may send a message to the system administrators asking that a user's account
be terminated because of such posting.

The Toronto Free-Net Board of Directors has taken the position that the only postings that will get a person's
account terminated is material that is illegal under Canadian law. Otherwise, the Toronto Free-Net will not
take any action.

Freenet Executive Director Mike Anderson had this to say regarding the continued attempts of a minority of usenet
participants to have my account on his system deactivated;

The TFN's policy is not to take action against members unless they contravene the Criminal Code of Canada, or
engage in practices such as forgery, attacks against other computer systems or mailbombing.

Mr. Corley, while possibly being very annoying, has not contravened the TFN's policies. The TFN believes strongly
in freedom of expression, while recognizing that the price for such freedom may be a high signal-to-noise ratio in Usenet.

If Mr. Corley breaks the law, we will take action -- until then, he has the same rights as any TFN member to post
to Usenet newsgroups. Actions such as mailbombing the TFN in protest will be met by strong complaints to the
originating site's postmaster. The best defense against unwanted postings may be simply be to ignore them and deny
the poster an audience.

TFN Executive Director Toronto, Ont CANADA

Personally, I find it gratifying that my contributions to usenet discussion are recognized as being conducive
to a high signal-to-noise ratio by their quality and thoughtfulness.

Does anybody know if the game Missile Command can be played
with a trackball (using true trackball mode) on the Atari 2600?

Anders

I read CSA8 occasionally, using Google. Is there some way to filter
the posts using the standard Google Groups reader? Or perhaps to
filter particular posters? Or if not, are there other message readers
for the PC that someone could suggest that do offer filtering? Thanks,
Larry

Try posting that question in alt.comp.freeware; there are tons of
newsreaders that could help (my email list, for example, posts to CSA8)

Hi Anders!

Is it not with a cursor (player), which returns back to middlescreen
when releasing the choosen digital direction!? I am pretty sure....

(Maybe the 400/800 version is Analog-controlled....)

Best Regards,

Daniel Mandic

The Thread has been renamed to "The 1450XLD fake thread"
http://www.atariage.com/forums/index.php?showtopic=99557

There are a lot of pictures and a "makeing of a working fake 1450XLD..."

I'm looking for a boxed original of Chopper Hunt by Imagic. I believe
the package contained both Commodore 64 and Atari 8-bit versions?

Lots of stuff I can use for trade -- or willing to buy.

Thanks,
Jerry

Well, nothing like December and that Christmas cheer, eh? Here is the list of
our winners for this month:

 1. 3 month subscription to ST Magazine - Callaghan!

 2. Mega STe motherboard - Doc Clu!

 3. Guderian (8bit game) - Jelle!

Next months prizes include the following:

 1. 3 month subscription to ST Magazine

 2. (another) Mega STe motherboard!

Congratulations to our winners, and good luck to all those who call this

month! :)

PS I'd better explain Doc Clu's winning strategy - he was the only one who
registed more than once for his prize - in fact, he registered multiple times.
The program I use to pick winners randomly picks from a list - a caller is
obviously going to have better chances the more their name appears on that
list. So the more you call and register.... :D

I still have my Atari 8-bit TrackBall new in original box with
small manual. I have never used it.

There is a switch for TB (trackball) or JS (joystick)

The manual mentions Missile Command and states
that if you switch to TB when playing missile command,
that you must type (CONTROL) T on your keyboard

before starting the game. And reset if you have
problems and try again.
Also, you cannot skip waves when playing Missile
Command with the setting set to TB.

Seems I recall this track ball works on a ST as well,
but not sure on that.

I think that the Imagination Station for the 8-bit works
on the ST as well. I still have this, but is used.

I have a original Monday Morning Manager,
(The BaseBall Game)
for sale.

It's all original, but no box.
2 original disks. Master and Alternate disk 1
Original manual and paper work in a 3 ring
plastic NoteBook with printed graphics.

Never used. In very good conditon.

Will sell to best offer.
Shipping is $5.00 for US/Canada.
Will consider offer from Overseas.

Send offers to:

Greetings,

Looking for some original Atari 8-bit
software titles.

Mostly WWII related games.
Crusade in Europe by Microprose.
Decision in the Desert

Most all WWII games by SSI such as
Operation Market Garden

I need original Manuals and Disks. Boxes aren't
necessary but would like to have those too.

If you have any for sale/trade, contact me at:

phantomm@bellsouth.net

If these can still be bought new, someone let me
know.

Stick with the original. The FB2 isn't 100% compatible with all carts
(not to mention all the other issues it has):

I still have to get an Atari Flashback of course.

I already read up on the Nintendo on a chip and made a post or two about
it. I haven't purchased one of the hackable ones yet I may never buy one
since I am not really interested in the NES but...

I was going through a local store and they managed to separate me from
~$35 for two of the hand held with RCA cable that have video and audio
out. One was a 75 in One GameGEAR and the other was an Intellivision
clone with 10 games.

Has anyone hacked one of these puppies? I know everything I would need
to know about hacking a cartridge port into the NIAC and Flashback but
am looking for technical specs like pinout and memory map. I couldn't
find anything worthwhile with google.

I'm kind of assuming the GameGEAR is NES based but it has a epoxy glob
with DIL 44 pin SO type main chip. I haven't looked into the
Intellivision yet. I'm assuming fewer pin out version of NIAC because
they have a 21.xxxx mHz clock chip like is used in the NES clones.

I emailed the manufacturer asking to buy a developer pack and got my
usual 'non response.'

Gamegear was a Sega Mastersystem. Z80 based system.

http://en.wikipedia.org/wiki/Sega_Game_Gear

Shit, Breen - with your head stuffed so far up PT's ass, why don't you
just remove it and ask him yourself?

Or are you just one of his multiple personalities... I see you follow
him wherever he goes.

And why post this message to the comp.sys.* groups? I'm sure you have
his email? Just trying to stir up more interest in your (his) stuff?

There aren't many hacks for the Flashback. The Flashback 2 has tons of
mods/hacks and is a real 2600 on a chip, so you might want to look into
that.

My STs are in storage but I was wondering if anyone ever hacked a MS
style mouse to work with an ST.

Seems like all you would have to do is take the signal between the
choppers and PIC out to the ST mouse port.

Rick

Hello fellow Atari enthusiasts,
In an effort to increase my inventory of IC chips used during repairs,
I have made a bulk purchase of integrated circuits. All parts are new
old stock and are guaranteed working. I have anywhere from ten to fifty
pieces of each part number listed below:

SC-01-A
AY-3-8910 (or AY38910)
AY-3-8912 (or AY38912)
DAC80-CBI-V
IDT6116 (or CY7C128A)
HC-55516
MC3417L
SN76477
SP0250 (or SPO250)
SP1000
TMS5200
TMS5220

All parts and prices are listed on my website at www.keinert.com
As an introductory offer for the month of Jan. 2007, let me know that
you saw this post in this newsgroup and take 5% off any order of
$100.00 or less (before shipping). Orders over $100.00 get the 5%
discount and free shipping in the USA.

These parts are limited to my stock-on-hand. I am not getting into the
IC parts business, nor do I intend to become a serious competitor to
the other parts suppliers who post on this newsgroup. I made a bulk
purchase of IC parts in order to fill-in my inventory. I bought more
than I needed so that the cost per IC would be reasonable. The extras
are being sold on my website.

Thanks and Happy New Year!
Kevin Keinert
www.keinert.com

DOH! I had another senior moment: I should have typed DreamGEAR.

BTW: Just bought another one for $16 or so. This was a 50 in one and I
think I can see a flash chip vs. an epoxy glob in this one.

I know the chances of talking them into doing something like 65802 and
bringing the lines out is nil, but still drawn like a moth to flame. I
mean just doing simple stuff like flashing it with patched Atari OS for

the NES video would be a start.

Lol, I know how you feel Rick. I have had to curb my enthusiasm with
these all in one units. I have in the lounge a Media PC, Xbox, Dreamcast
(can be used for 2600 emulation;-), N64 and a Jaguar, the kids room has
a Genesis, CD32 and N64. I also have a box in the study with a 2600JR,
2600DV, Playstation :-p, Saturn and SNES. If I bought any more home the
wife might go spare;-) I have around 15 Atari computers too, so I am
treading on thin ice, grin.

Mark

Hello,

It's been quite a while since I've been into Atari 8-bits. I'm glad people
are keeping it alive though. Thing for me is though, I have tons of
equipment laying around that I will probably won't ever get back into. I
haven't checked my inventory, but I'm pretty sure I have at least 2-3
800XLs, 2-3 130XEs - some with upgraded ram, a couple of ICD MIOs, a Black
Box, probably 4-5 1050s, a couple Indus GTs, I think a few 300/1200/2400
baud modems, a couple of printers, etc. I think I even have an original
copy of Carina BBS, or at least I did.

I'm wondering if people would be interested in this or if the old 8-bitters
are doing something else now - meaning emulators, etc? I'm not looking to
buff and shine my stuff and ebay it. I'd much prefer to put it in hands of
someone that would make good use of it. In fact, some of my stuff is
apart - which, of course I would assemble if requested - but any
soldering/modifications I've made in the past are solid.

Anyhow, would anyone here be interested? If there's not a real market, I will just keep it until I have time and inclination to delve back into it. Also, I'm not interested in selling individual components or parts. I'm more interested in having my stuff in the hands of someone that has the time and dedication to Atari 8-bit.

Best regards,
DM Hebert

I'm actually a little bit more optimistic with this one. They have a SOL
6256 CMOS 8K X 8 RAM and the flash chip appears to start ~M5M29F? which
should be a standard manufacturer type like Mitsubishi where I can get
data sheets. Looks like the things in the epoxy glob are sound, video,
and processor. => at least 16K worth of address lines are brought out
and the data lines will be obvious.

It is probably outside the limit of my abilities but I would like to see
if I can hack it a bit. I mean I should just go buy a palm pilot or
something but it's a hobby I guess. This would be *SO MUCH EASIER* if
they just said ~"Send us $200 for a developer package."

I'm not really a fan of the NES graphics. I'll ack 16 colors in 256X240
rez is better then 4 colors in 160X224. I used my Atari for everything
from home control to modeming mostly where 40 column text beats 32. If I
can get something programable in 6502 asm with 1 bit of I/O I will be happy.

Rick

Have now, thanks. Seems a bit pricey at ~$40 but I guess switching to an
optical mouse would be worth it.

Got one when they first came out - works a treat, plug 'n play, totally
transparent to the user.

PS Not one this month, but check occasionally with my BBS - we gave 1 away
not too long ago as one of our monthly prizes. :)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

where are you located? I would think that if you were looking into
passing on your entire collection, your best bet would be to arrange
with someone able to pick it up locally.

Vidar,
Where were you able to obtain the BB from?

$3090 by user bumzyman (maybe or maybe not
the same bumzyman posting here.) Bumzyman
made his snipe bid 2 seconds before closing.

The standard Black Box was sold without a casing. CSS did offer a
plastic casing for it (black, of course) for an additional fee. Bob
told me once that it cost a fortune to have the cases moulded, and that
he actually made no money whatsoever selling them.

Well, if I had that much I wouldn't buy a 1400XL with it anyway. ;)

Unfortunately, I do not have any Atari trackball to try this
with. Maybe I have an ST mouse somewhere.

If the output from the trackball or mouse is a fast sequence
of bit values, then one could write a machine code program
that writes data from the joystick port to the frequency
register for an enabled sound channel and listen to it. The
BASIC program above would be too slow.

Anders

Two bit if I have it right. Just the raw bit data is decoded by the
processor in either the 2600 or 8 bit.
>
> Anybody, please explain how the 8-bit Atari handles the
> trackball device.

Rather then a pot they use quadrature encoding. I think one of the early
8 bit docs like De Re or Technical Ref had an explaination but Circuit
Cellar has a good explaination.

http://www.circuitcellar.com/library/designforum/trenches/1/index.asp

FWIW: The ST mouse is just an upside down trackball. Most serial ball
type MS/IBM mice used the same type scheme except they had ~PIC
microcontroller built into the mouse to decode the motion and do the
serial communication.

Hi there,

Can anyone help me? I got this really nice old PC at the flea market on
Sunday.
I cleaned it up and it says it is an Atari 1200XL. I don't really know
what that is.
It didn't have a VGA output but a TV cord was included. In one of the
disk drives
was a DOS disk, but it is version 2.0. It didn't work so I got out the
DOS Disk
for my old PC. My disk is version 6.22, but it doesn't work either.
I think it's the last one you can get on 5.25" disk. It is supposed to
work,
but it doesn't on my Atari.

I just get this nice colored Atari BIOS Logo. I am not able to get into
the
BIOS setup. I did a search on Google to see if I could find out how,
and I can't
find anything at all. Does anyone know which key I have to press?

Is there a way to hook up a CD-ROM drive and an NIC?

Thanks in advance,
Atarinoob

No, no NIC or CD-ROM.
You got more than one disk drive, so one of them
needs to be set for Drive 1 in order to boot.
You got the Atari logo screen so you have a monitor
setup/connection.
There's no BIOS to configure, the OS is fixed.
You must have a SIO cable from computer to drive.
You have a 9V AC power supply plugged into the
drive. If it is a 1050, you look at back and make
sure the black and white switches in the square hole
are to the left as you're looking inside, this sets the
drive as D1:
Luck

It's not a PC so your PC DOS disks are certainly not going to work!

First of all it is NOT an intel powered machine. That DOS disk is for
AtariDOS 2.0 it is NOT intel/MS-DOS. Any software has to be Atari software.
I wish I had that very fine computer, I'd have it up and running in no time
and yes it does use the TV as a screen.

Hello!
I've posted here in the past asking about resurrecting a dead 600XL.
Something recently came to my attention.
What happens if the 'option' button is pressed during boot. I read it
bypasses BASIC, but that's all the info I could find. What does it display
etc?
I'm asking because I have some doubt about its side buttons. Well, all of it
to be honest.
I thought maybe it's just a case of overlooking something simple. Probably
not, but it's worth a shot.

Any help would be appreciated. Seeing one of my 8-bitters in a nonworking
state does make me sad.

Holding OPTION when you boot the 600XL will
give you the self-test screen, I think, if you have
no disk drive connected.
If you have nothing on the screen, it isn't the CONSOL
buttons problem (OPTION, SELECT, START, HELP).

Is your power supply OK?
Can you test it with another A8?

First off, I have no idea if the power supply is OK. Later today I should
have a chance to look at it. I'll start it up with the top off to check
voltages under load.
Unfortunately the only other things I have bearing the Atari logo are a Lynx
II (also dead) and a pile of 2600s, so a test on something else won't work.

> Holding OPTION when you boot the 600XL will
> give you the self-test screen, I think, if you have

Interesting. Thanks for that. Now I know what I'm not getting.
I have no floppy drives for it either.

> If you have nothing on the screen, it isn't the CONSOL
> buttons problem (OPTION, SELECT, START, HELP).

IIRC it just displays a brown screen. No sync problems etc. Like I said I'll
have a look a little later.

Is there anything simple I can type blind to get another reaction out of it,
ie a sound etc, to help narrow down the problem?

Thankyou for your help so far. Unfortunately I know very little about the
Atari 8 bit line, and need the help of more knowledgable individuals such

as yourself.

               Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Thanks for the answers!

I'll take a look, but there are no holes with switches in the back.
You say a 1050 drive? I was refering to the internal drives.

I'd like to continue on www.atariage.com, my account is just
beeing validated and i have posted a picture.

I'll update my post with the info i got here

thanks
atarinoob

XF551's high speed 38400 bps burst mode usable only with SuperDOS 5.1 but it
doesnt work with Indus GT. I thought Indus GT Synchromesh mode usable with
SpartaDOS X and DOSXL. SuperDOS 5.1 cant detect Indus GT. how come?

Thanks!

Possibly a loose chip.

Open the machine and remove the silver coloured RF shield. The
keyboard plugs into the motherboard via a ribbon cable. Just be
careful not to damage it when pulling out and replacing.

Then just push gently on any socketed chips to ensure they're properly
seated.

I have 2 Indus GT drives sitting here, but I never used them other than to boot a few games and make sure they worked (1 is junk, the other is pristine). This is the first time I have heard of Synchromesh mode. Did a quick google and... holy crap. 72kbps? Anyways, if you follow this link http://www.faqs.org/faqs/atari-8-bit/faq/section-21.html you will see that the synchromesh mode is supported natively by SpartaDOS X and DOS XL.

Indeed, I did dig out my SDX cart and working Indus to check it. My Indus GT supports high speed mode, but does not support UltraSpeed mode, while my XF551 with the Hyper XF mod does, and so does AtariSIO/APE/SIO2PC. DOS XL is interesting, but it's obviously not as fast as SDX.

And regarding the XF551, it's high speed mode works with other DOSes than just SuperDOS 5.1. Examples include MyDOS if patched with Mathias' high speed driver (also works great on SIO2PC software), SDX, SD3.2G, and those are just the ones I know of.

The Indus GT is a fancy drive, but I think I prefer my XF. Having been inside both of these drives, I vastly prefer the XF's simplicity. On the inside, the Indus reminds me of a bowl of spaghetti.

The ID switch is on the back of the disk drive itself, not the computer and if you have more than one 1050 or 810 drive, then one of them has to be set for 1, and the other 2. No place for anything like a cd rom. I had a 12xl way back in the mid 80's wasn't a bad machine at all.

I'm very happy with the Kyocery Mita Laserprinters. They still support
Epson and IBM ESC Codes (as well as PCL and Postscript), have all Codes
documented in the handbooks (downloadable as PDF from the company
webpage). Also the printers are very reliable and have low life cycle
costs. Be sure to check the Emulation Features, as they also have some
Windows only GDI Printer.

I have the FS1200D (with duplex printing feature).

Carsten

My Indus can beat up your XF551! naya! naya!   :)

Seriously though,I think the Indus is one tough drive.

I have six of them and all work like new,outside of having to clean the
heads (because
 of the build up of crud from 20 year old disks).

The XF551 is not so robust,I have four and two are down.One of the
downers is powering
an IDE harddrive and the other one,I am going to try to mod into a
3.5",just for the h*ll of it.

Atari had a good idea,but tried to make them too cheaply (low
quality).There has been a
lot of trouble with the SIO ports,among other things.

IMHO,the XF551 and the 360k format,now,are just not worth the
trouble.To keep things
simple,I stick to the 180k format and flippies.

Like a lot of Atarians,I am in the process of recording my floppies (
with SIO2PC/APE)
to disk images (that never deteriorate).

Even though our Atari disk drives have been troopers,the time is coming
that they will
(sooner or later) fail.

Hello, Ed.
My website is gone. I have a 'briefcase' yahoo URL
where I can post stuff. You looking for something?
I changed ISPs several years ago.

Looks like I was slightly wrong about the symptom. The screen colour is red
and not brown. I tried it in a different television.
There are also what appear to be 8 (possibly more off the left of the
screen) vertical thin artefact style lines going from the extreme left to
maybe 1/3 of the way across the screen. They even go past the top and
bottom black borders.

Unfortunately there are no socketed ICs. All are soldered in.
I didn't get as far as checking the voltages. I did a far more primitive
test.
After fiddling with the tuning on the TV I just went along and touched each
chip to check the temperature.

U4 was warm. U11 and U12 were extremely hot. On realising this I killed the
power.

Also, I'm not sure, but the ribbon cable conductors look discoloured in
places like from heat.

Sorry about the self reply.
I just went through, cleaned up whatever traces I could etc. The board is in
poor shape underneath All the larger tracks are badly bubbled.
I now get a nice clear stable red screen with no artefacts. Nothing else
though. Oh well.

I need advice on how to record game sequences running on an

Atari computer. I would like to record both graphics and
sound, preferrably on a PC with the Atari game running in an
emulator. It would be cool if the recordings could be
written to a DVD disc and played in any DVD player.

All this can probably be done if I connect "TV Out" from
the PC to a stand alone DVD recorder/player. I do not
have a stand alone DVD recorder/writer/player so I thought
maybe it would be possible to find a PC software based
solution to capture video and sound from the Atari emulator
and write to a file.

Thanks in advance for any help with this.

Anders

You could always try fraps. http://www.fraps.com/

I almost never use any Atari emulator, but I occasionally use Atari800 under
Linux, so I don't know if there's a win based Atari emulator that uses
DirectX or OpenGL. If there is an emu that uses either, fraps should be all
you need.

Good luck.

I suppose you could get yourself a video capture card and record from a real
Atari! The nice ones have hardware encoders on the boards, but you can get
a cheapy and use software encoders for $50 new, or even cheaper used!

In my nonspecialist opinion it sounds like the potentiometers in the
original paddles are a different value to the AF2 pots.

>

Personally I'd keep using the 2600. Especially because the paddles wouldn't
require modification.
Been meaning to do that RCA output mod to one of the 2600s around the
place... But first I have to find/fix a power supply. Through various
accidents most have had their cords broken.

Atari 800Win has a "Save Video" option.

It would really be great to have something like
http://www.c64-longplays.de.vu/ for the A8!

Happy new year to all Atarians,

Frank

Probably RAM. If you get as far as a stable screen of some kind that
usually means GTIA, 6502, et cetera, are all working through the initial
start up.

But leave it on over night and reboot in the morning. This sometimes helps.

The 1200XL I had didn't have a built in drive, I had 3 1050's hooked up all
ending with a xm301 modem.

Hi,

I remember years ago typing pages and pages of basic code into my 800xl, the code mostly came from ANTIC magazine. I've found ANTIC magazine online with all of the programs. But they did not include any of the source code. Can anybody tell me where I can find the source code from the magazines? Unfortunately I no longer have the magazines. :-(

Thanks.

How about downloading the new 4.39 Version from
http://trub.atari8.info/index.php3?strona=html/sdx_upgrade_en.html

You can also find the original DOS XL Indus Disks with the Synchromesh
Driver and a more information about the Indus at
http://www.retrobits.net/atari/indus.shtml

Happy New Year!

Boys, take a look at AtariAge and have fun. Beetle did a nice prank with
his "found" 1250 XLD. Take a look at the awesome pictures. A nice piece of
art.

Cas

The Win32 port of atari800 is DirectX-based.

Interesting. I've been browsing the site, and I see source code in
multiple languages. Some of them are downloadable tokenized .BAS files,
some are links to ASCII source code, etc.

Granted I haven't gone through every (or even most) issue(s) but still,
there is source code available.

qnr

RAM was my first thought too. The heat of those two chips bothered me
though.
There was something which I didn't really connect until now. I found a few
tiny balls of solder nearby. I think something is causing the chips to go
into heater mode to the extent they melted some of the solder. Some of
their solder looked a little depleted, but the workmanship on this unit
wasn't so hot anyway.
The question is where the short (or fighting logic I guess) is.
I wish I had written down the actual type of chip that was heating up before
I resealed the unit.
I can tell you that they are the two chips between the row of 8 resistors
and the cartridge slot.

>

I'm scared to leave it on for five minutes! But you are right. In a lot of
cases that does seem to help electronics that haven't been used in a long
time.

They should be 64k chips organized as ~16k 4 bits wide. If they still
are then it could have been a botched repair. If they are 256k as 64k X
4 bits chips, there is a chance someone tried to expand it to 64k.

For the most part, Antic did not publish assembler source code. (Quite
contrary to Analog, which did.) Antic published mostly BASIC programs.
 The BASIC files are there. Most programs that had assembler were
listed as BASIC data statements which when typed and entered became
machine code modules or programs.

A long story short... The driver modules are different. AFAIK, only
Dos XL and SDX provide drivers compatible with the Indus. I have
several Indus, and over the years I've tried to find (and even write)
an Indus driver for MyDos. It was once rumored that SuperDos 5.x would
have a driver, but I don't believe it ever happened. -Larry

What prank? I went to Atariage A8 forum and
couldn't find the '1200XL setup problem' thread.
Those pictures looked real.

Are there any analog magazines online? I used to have quite a stack of
atari magazine, I thought they were antic, but must have had alot of Analog
magazine as well. It would be nice to find an old collection of those
magazines.

Good game for sure! I played it recently on the Atariage game contest. I
almost reached the end. Don't you fight this big boss jumpy thing at the end
of the map? How do you beat it if so?

FamilyNet International Newsgate

Hi! I record Atari sequences, but the way I do it (just to chime in for possible inspiration) is using a G4 Mac and EyeTV video capture module. I have an Atari 800 with the More than Games Break out video Box (which allows you to use standard A/V cables.) I have a Y-adaptor so that the Atari 800 displays in real time on the A/V monitor, and buffered time on the EyeTV.

The resulting videos are sent to YouTube. So go to YouTube, do a search for doctorclu, and you'll find my Jaguar, Atari 800, and Atari ST videos.

Currently showing... Star Raiders:The Commander Mission. :)

I also have a generic Indus driver on my to-do list. The problem is that
the Indus has a Z80 CPU internally, and the driver will load a Z80 binary
program into the Indus, and I'm not very good in Z80 assembly.

The SDX 4.40 team from Poland might have the SDX source for the Indus.SYS
Driver. With the source it would be much easier to write a generic driver.

Wow what a nice collectible and in such good condition.   This model
has a built in modem and speech synthesizer right?   I was wondering if
you ever tested the speech synth out?   I have only my old Atari 400
from the 8bit days and would like something this rare, but I have no
idea what a reasonable price would be.   I'm sure way out of my league.
  How much did you originally pay for it?

Kev

This computer has the wire-wrapped modem board that you can see in the
photo. The product literature that was widely distributed mentions a
speech capability but I have not tried it out and am not even sure if
it is included. I originally paid $900 for the computer in 2002.

Using a mouse instead of a tracker ball will obviously make the game
significantly easier.

I prefer games with a challenge, thus I'll use the tracker ball if I
have to.

Anders asked if the trakball senses speed of the ball.
I guess so.
But the trakball isn't 'harder' than the joystick, it is
much better control of the missle command crosshairs.
But the game goes faster than with the stick, I think.
You can get a pretty good score with the ball.
I think you have to hit 'T' at the beginning of the game
to enable trakball version, seems like.
I very rarely actually play it any more, so memory
may not be right.
Rick says you can use an ST mouse instead of the
trakball, in 'T' mode, I guess, never tried that.

   On Tue, 19 Dec 2006 at 09:22 -0500, Russg scribbled:
->Missle Command is the only program I am aware of that uses the
->Atari 8-bit track ball. It is much more fun than using a joystick.

   What? Didn't you ever use a trackball to play Pacman with?!

   Back when Atari 8-bits were state-of-the-art in "home" computers,
some video games played better with a trackball than a joystick. And
then there were some games that played worse, sometimes a LOT worse,
but using a trackball made it more challenging or more interesting,
or just plain crazy!

I wasn't/ain't aware you could use a trackball with Pacman. I might even
break out an 8-bit and try it.
I've always been frustrated by the joystick with Pacman,
seems like it doesn't respond sometimes and you get bonked.
You hit a 'T' to get the trackball version?

Or, is that using the joystick mode on the trakball?
I think that's what you're talking about. You can use
the joystick mode with any joystick game.

the reason i asked is because it doesn't feel like the old krap.pl list
is maintained anymore if at all; i send an email to the krap list and
don't get copies of that same email in any of my other emails; is the
krap list dead ?

The sad thing is that I have never seen an arcade version of Pacman
with a tracker ball as the control, only a joystick. However, for a
game like PacMan, I would prefer joystick.

In my opinion, trackballs are for games which have an almost indefinite
number of directions on the screen whereas games in which the
directions are finite and limited, where they are either up, down, left
or right, the joystick would be the best option.

no, it's not.

probably you are using some spamfilters that block your mails from
being returned to you, or even block all the atari8-l traffic.

your address: proteanthread at yahoo.com is included in the subscription
list of atari8-l.

the emails from the list reach your mailing system:

Dec 21 12:42:01 zwieracz sm-mta[14903]: kBLBY5L7014895:
to=proteanthread@yahoo.com, delay=00:07:56, xdelay=00:00:02, mailer=esmtp,
pri=4255583, relay=a.mx.mail.yahoo.com. [209.191.118.103], dsn=2.0.0, stat=Sent
(ok dirdel)

this is the log message showing that the latest one had reached you.

please keep in mind, that you should send emails to the list from
the email address you are subscribed with, so if you have your yahoo
account on the list, and sending emails from gmail, your messages
will be discarded as spam messages.

you can either resubscribe with gmail address, or i can add your
gmail address as trusted one, so you'll receive emails on the yahoo
as usually, and be able to send to the list from gmail, if it fits
you better.

well so should rtdos and proteanthread at aol and rtdos at hotmail too.
 when i post a message in one it does not come up through the list in
the other emails.

this has happened before (even when i used sysop at rtdos).

Don't have an answer for you but I absolutely hated the 8-bit version
of Missile Command. I seem to recall slow tracking with the joystick
but worse than that there is only one missile site.

Part of the fun of the arcade version, for me, was trying to manage the
three missile inventories. Often using the side launchers to throw up
a defensive screen while saving the center launcher for precision hits.

Recently, I was happy to learn that Paul Lee produced a nice hack for
A8 Missile Command. He brought back the three launchers. You can play
Missile Command+ using 3 keyboard keys to control missile launchings.
Plays just like the arcade version. Of course you need a desktop
joystick.

If you don't wish to play using keyboard + joystick (or trackball) then
you can use the alternate method (smart tracking?, I forget the name).
Use just the joystick (or trackball) with just the Fire button. The
program will launch the missles from the launcher nearest the targeted
point. This might at first seem to be a cheat but when you deplete
missiles from one launcher you will quickly learn how difficult the
game is if there are only missiles remaining on the WRONG side of the
playfield. (They require more time to reach the target point).

Paul Lee has released both an ATR version and a ROM image of Missile
Command+. Be aware that the Missile Command+ image is 16K in size
where the orginal Missile Command was only 8K.

See details at link below.

->Or, is that using the joystick mode on the trakball? I think
->that's what you're talking about. You can use the joystick mode
->with any joystick game.

   No, I'm not talking about 'joystick mode.' I mean using a track-
ball as a trackball to play a game that's meant for joysticks. With
some games that idea worked fairly well. As I recall, Centipede and
Millipede were in that category. The Pacman family of games were
not. For those, trying to use a trackball simply made the game ex-
tremely bizarre. (What you'd call 'frustrating'!) I pretty much
played those games out so there was no challenge left except to go
for the bizarre.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

RELATED NEWSGROUPS:

why would i want to even work on my retro webportal / wiki or even my
alt os project now; damn, people in other retro communities are
assholes; i mean total assholes; there is definately something unique

about the atari community (whether atari vcs, atari 8, or atari st),
the atari brotherhood; go to comp.sys.ti or comp.sys.tandy or any of
the others and search on rtdos proteanthread or prot3anthr3ad see what
i mean (esp. the more recent posts).

they are not helpful at all in these other groups. they snap or flame
ya at every suggestion, comment, or question.

Fuck 'em! Long live the Atari!

I'm buying out an Atari warehouse that's been locked up for over a decade! Games & more listed below for ST & 8 Bit!Reserving orders UpFront for Any-Customer! If this lot goes well, I'll buy more Atari lots! Titles listed below I'll get 1, 2 or 3 of. Saving Atari Games from oblivion by PrePaying your order. All are NEW in BOX! If you dont buy Today, I cant save you any Money!E-Mail BenSells@Atari.org or call (503)256-9974!1st come, 1st serve!

Midway Battles and Ultima II are already spoken for.

Prices below are for one copy each.

8 bit titles

decision in the desert; micropose $20
kennedy approach; micropose $20
logo; atari, complete in thick silver box $20
napolean in russia; datasoft $20

st titles

arcanan; no excuses $20
auto duel; origin $50
axe of rage; epyx $20
data manager; time works $20
design idea; time works $20
down hill challenge; broderbund $20
fleet sreet publishing; michtron $20
fools errand; miles $20
frostbyte; microvalue $20
goldenpath; firebird $20
gridiron glory; bethesda $20
lords of conflict; electronic arts $20
manhunter 2; sierra $30
midway battles; tdc $20
olympus; olympus $20
operation clean streets; broderbund $20
people places things; time works $20
phantasm; exocet $20
santa paravia; starsoft $20
sorcerer of claymorgue castle; keypunch $20
space quest; sierra $30
starflight; tpi $20

stock market game; tdc $20
summer games; epyx $20
symbols and slogans; time works $20
tank attack by; artworx $20
targhan; silamarlis $20
ultima II; sierra $60
zynaps; hewson $20

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Didn't like my answer in comp.sys.ti? Google is your friend. You will find
the #1 TI list using Google. There is no replacement. We need no others.
There have been many attempts, they have all failed for one reason or
another.

Besides, given your post here, I wouldn't want to associate with you
anyway...

At least until you grow up.

Exactly. There is no room for more than one list. ONLY ONE! Then,

when it dies, there will be none.

Excellent attitude, you have just reinforced what the original poster
was saying.

your list is better, we get it, who would want to help you? you
obviously know everything.

BTW, the commodore community isn't all assholes. but there are a fair
share of them.

Retro is dead. The users that are left won't admit to it. By not
giving someone an honest reply and merely telling them to Google'It
they are killing their corner of the internet themeselves. You'll see,
Atari will be the last one standing.

Gee, I'm replying to a bunch of top-posters! Everybody who has replied
to the thread has been a top poster!

Pointing someone to Google means simply "Get off your lazy arse and
look for the info before flooding every damn Usenet group with a stupid
question!"

Besides "Protean" has already asked this in the past. And I haven't
seen ANY development on RTDOS in the 5 years or so PT has been spamming
Usenet about it.

CF Flash card adapter, just this year.

>
> hmm, did you get an ehternet card?

No, just use a UDS-10

>
> IDE interface?

Yes, IDE interface last year (not counting the CF Flash which has an IDE
interface). This joins the SCSI interface that has been out for 10 years.

>
> Peripheral emulator?

And what is a "Peripheral emulator"?
We have Gram emulators that allow multiple cartridges to be loaded from
disk, modifications, etc.

>
> any cool demos? new games that push the limits of the hardware?

Yes, a few demos, a few games. But most of us are grown-ups and don't live
in our mommy's basements like yourself and your friends. And since I seem
to be arguing with such...

> no?
>
>
> hahahaha, we got all!

Here you go! *PLONK*

(Note to grown-ups reading this thread - I have the greatest respect of
other computer communities and have been a long-time lurker (and
participater) of Usenet groups such as comp.sys.apple2, .atari.8bit, .cbm,

.sinclair, .tandy, and .ti along with some programming groups as well)

uds-10 is ok if you cant make a real card.

a peripheral emulator is a program for your pc that connects to your
8bit (sio on atari or IEC on commodore) and allows the 8 bit to access
files on the pc as a native peripheral.

like APE for atari or CBM4WIN or 64hdd for commodore.

the point is, someone tried to help out the "community" which as far as
ti is concerned is dead, as noted by all the free ti stuff i see, the
lack of REAL expos or any demos or games that dont suck ass, and you
lash out.

YOU need to grow up and respond respectfully instead of saying GOOGLE

this, Snobs and arrogant asses say that, not members of a symbiotic
community.

as for the basement, i have been happily married for 13 years, out of
my parents house since i was 18, and very successful.

btw, commodore has had scsi since the 80s (atari too, if i am not
mistaken)

if your only semblance of comminuty is the lame yahoo group and some
website that has every lame ass plugin for nuke installed, you are as
good as dead.

I used to think other retro people were like us, but i find that they
are bitter because their communities are not thriving.

so feel free to talk down to a group that is clearly superior, we don't
mind getting our feet dirty once in a while :)

Currently, auction is going on Atari 5200 digital joystick adapter at:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=320064613472&ssPageName=STRK:MESE:IT&ih=011

For details, you can see http://www.krishnasoft.com/sps.htm.

It's a special Y-type cable that hooks up to the DB15 joystick port of
an Atari 5200 and lets you use the Atari 2600 touchpad/keyboard
controller for most of your Atari 5200 keypad functions. The 2nd DB9

connector on the cable lets you control the X/Y/buttons of the Atari
5200 joystick using either PC software called MPDOS or via your own
constructed digital joystick.

Any questions, please ask. Thanks for your time.

MPDOS is also available in another auction at:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=320064614051&ssPageName=STRK:MESE:IT&ih=011

And Merry Christmas to you too, and every one else that happens to be
looking. Happy Holidays to those that don't celebrate Christmas, and just
plain "hiya" to those that have no current holidays!

The pre-alpha version of Tic Tac Toe Plus, which is actually a Tic Tac
Toe game, will be made available on Wed 27th.

Your contribution is needed and will be appreciated as we would like
persons to sample this version of the game and give their honest
comments, whether good or bad, report errors and problems, or give any
good idea that will be splendid for the game.

This version is only a pre-alpha version, it is not a completed game,
therefore do not expect mush visuals, options or gameplay as a matter
of fact.

To test the pre-alpha version, subscribe to the group "Makers Of Video
Games" at http://groups.google.com.vc/group/maker-of-video-games?hl=en.
When your membership is permitted, which should not take any longer
than 6 hours, you can then download and play the game.

Give all comments, reports, ideas and ask any question in the topic
labelled "Comments on Tic Tac Toe Plus, Pre Alpha Version" at the group
"Makers Of Video Games."

Please read the Page labelled "Tic Tac Toe Plus, Pre Alpha Version" in
the group "Makers Of Video Games" before downloading and playing.

Just got the AF2 and am using old paddle controllers for Warlords.
These paddle controllers have not been used in at least 15 years. They
seem to work ok, but the range of motion is limited. In other words,

the sheild travels in its complete motion with only a few degrees of
turn from the paddles. It makes it very difficult to control.

Is this a problem with the paddles, or the way the AF2 works with the
old paddles? Any help would be appreciated.

One additional question. Should I hack the AF2 to accept carts, or
should I just keep using my old Atari 2600 modified for RCA outputs?
I'd used the cartridge connector inside the 2600 for the AF2.

Thanks in advance.

I am interested in connecting a slightly more modern parallel printer up to
my atari with my 850 and/or P:R: interfaces.

Anybody here have any success with any more modern inkjets or laser
printers? The one I am particularly interested in is the HP LaserJet 5L.
They are cheap, and can be found by the thousands, but I can't find any
information on whether or not they have an Epson FX/MX/RX emulation mode.

If the particular printer in question can't be used with the Atari, what could I use instead?

I am currently using an Epson MX-80 III dot matrix. Excellent printer, btw. My step-father bought it back in the day and was using it on a 8086 for YEARS, then gave it to me a couple of years ago when he cleared out his garage. So far, it is the only non-atari printer I have hooked up to my A8 and it worked right off the bat with no crazy hurdles to cross. It's just SLOW. :(

I appreciate any input.

Thanks,
David Bowden

Though I dont have an atari to test on, i would assume that any printer
with a parallel interface that runs in ibm dos mode would work with the
atari since all the logic / controls are on the printer, not in the
computer like the new printers.

I have a driver for AtariWriter for the HP Deskjet somewhere(I just
did a quick look and didn't find it)
This should work with most HP printers,as they used HPCL to controll
most of their printers.

As soon as I have time for a better search,I will send it to you.

Right now,I am using an Epson Stylus 800 (inkjet) with my Atari an it
works quite well!
Very reliable and the cartridge is easy to refill.

I am glad to see someone post something here,as it seems like this has
become an advertising venue for Ben Smith. :(

I do, but of late, it has been dead. I think I've gotten a total of 3
messages in the past 2 months (or so).

First of all I want to say thank you to everybody who replied to my questions in comp.sys.atari.8bit in the thread "Missile Command - home computer vs arcade" on Dec. 19, 2006, at 12:41.

Hearing about the possibility to connect a trackball (or an Atari ST mouse) to the 8-bit Atari computer enabling more

authentic play of Missile Command, was inspiring.

Here is a technical question.

To my knowledge, the Atari 400/800/XL/XE computer series supports the following logical input on each 9-pin joystick port: Up, down, left, right, button 1, button 2, paddle 1, paddle 2. All are digital except the anolog paddle inputs. Some of the pins can be given output properties.

So how does the computer handle the input from a trackball or an ST mouse? The input from this type of device is a sequence of digital one bit events that need to be counted, either by the I/O hardware or by the CPU.

Anybody, please explain how the 8-bit Atari handles the trackball device.

Anders

I don't recall, but it would be interesting to just make a small program to
print the values from the stick, paddle, and trigger registers in a contuous
loop, and then connect a trackball and see what changes as you do so.

You can only get the rest of the series on DVD. Here's the website:

http://www.onceuponatari.com/

It's well worth the purchase to get all four episodes on one DVD.

Well, but it's all using the same software player. Some minor
differences can be found (there's something like a v1 and a v2).

The same player is also used by the "Passonately" (sp?) music demo,
BTW.

So long,
     Thomas

I have a semi defective drive here. Just wondered if you knew what the
weakness of these drives are. It didn't read disks, I took it apart and
after squeezing the chips and feeling the solder points, it suddenly started
again.

Is there any particular part of the print board that is weak? I ask because
it's the second drive that goes down for me. My 1050's are flawless, never a
problem-

Thanks for any pointers

    Re-solder the SIO jacks to the PCB, then add bolts in place of any plastic
  rivets. This is the most common failure besides the mechanism itself in
  the xf551.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

well the list is up; opened up some more boxes today;
these were some of the heavier boxes, more than likely
books or monitors or odd systems; so far what i have
found is 3 of the 4 boxes contained books; however, 2
of the boxes so far appear to have gotten wet or
seriously damp; the books in those boxes were mostly
of the BASIC Programming Language (guides, programs,
etc.) of various systems (oddballs such as those from
tab, BBC Micro, Acorn, etc.); those are gone. (some
are stuck together, others, the binding is gone) i
know i did not store those like that and not sure how
the area got damp or wet (smells like mildew) as the
box doesn't appear to have been wet. another box had
about 2 dozen intellivision cartridges (some with
radio shack logo on them for the clone made by radio
shack) which also appeared to have gotten wet (they
were in another area of the shed) as there is some
corrision on the contacts. i live in a dry climate so
humidity is out of the question.

i was hoping to finish up the rest of the boxes by
this weekend but that doesn't look like its going to
happen. what i'm gonna have to do and should have
done is selectively check each system for corrosion
and or power up a few systems here and there to make
sure something works. :-(

the 2 problems i am facing: short on time and short
on space. it'd have been nice to have opened up all
these boxes in a wharehouse type enviorment. lol.

i'll keep ya'll posted thru the link i supplied
earlier.

they say that there is a silverlining in every rain
cloud; i certainly hope thats true here.-Jeff

This must be the opening scene in the never released Scott Adams

adventure S.A.G.A. #15.

I would try: "examine jack"

Anders

Who's currently using the APE OS+ upgrade? I'm considering this hardware
hack on my 800xl, but I'm not yet committed. My 800xl already has a MUX
ROM and other mods (memory, video, audio) and I'm hoping there'd be no
conflict or issue like I experienced with my beloved 768k XE

Sorry about the format of this post.. It was from me, but via Google.

My 768k XE died a few years back and I've been using my 256k XL, and
would rather have an XE if I'm going to continue using an 8bit.

This message typed on my 800xl, connected via Telnet using a UDS10!

Hy, i saw a very funny Demo on a German Party called "XZentrix" (the Party;)
and after that i was not able to find the demo on the Net...
Maybe someone can help me?!

The Demo loaded and after taht a Sheep was shown which was turning round and
Round making funny faces and other things. Between the scenes where the
sheep was shown, there was fast cut ins with some text and drawing like
Graffiti.

There was a second part of that Demo, where the Sheep have other movements.

The Sheep was a copy from an old Windows 95 Fun-Screensaver where the Sheeps
fall from above and run over the Windows.

Maybe someone can help with the Name of the Demo or a download URL...

Thanks so much in advance
Tolkin

Guys,

*** Re-listed due to eBay stupidity! ***

Less than 24 hours to go, with plenty of HTF titles in as-new condition,
including a bunch of great PC, Amiga and ST titles, as well as plenty of C64
disks, including a couple of C128 specific, many still at their listing
price!
Items are in the UK, and in Pounds Sterling (shipping will be higher to the
US/abroad), but you will be hard pressed to find some of these in this
condition again.
Seriously - have a look through, lots of hard-to-find titles (some sealed),
I will also likely be putting up a large number of Atari 8-Bit titles this
coming Sunday (12th November).

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZcawley1 (US list)

http://search.ebay.co.uk/_W0QQfgtpZ1QQfrppZ25QQfsooZ1QQfsopZ2QQsassZcawley1
(UK list)

Cheers,
Paul

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

RELATED NEWSGROUPS:

Hello All,

I am selling electronic copies of the QUICK programming language on
eBay
(which includes ATR and DCMs of the disks and a PDF manual) for just
=A30.99
(around US$2). This is a promotional price to 'test the waters' with
this
kind of distribution, so if you want to take advantage of it, you can
buy
one on eBay now:

UK/Europe: http://search.ebay.co.uk/_W0QQsassZdeangarraghty

US: http://search.ebay.com/_W0QQsassZdeangarraghty
(as at the time of posting it hasn't shown up on the US site yet, but
it should)

Full info on QUICK and what is included, and how the product is sent to
you=20
is in the listing.=20

Hello,

I have finally finished the first batch of the rverter 2 type sio to
rs232 interface. Called SPEEDIER:. Runs up to 19.2K baud.
This is an EASI/O device. Inroductory special includes this cable, free
for a limited time. $30.00 plus any shipping, tax, and paypal fees.
Read the advert for more info.

Just curious how many of you are using removable media on your Atari
8bit systems..

At present, I have 3 x Syquest 44mb and 1 x Syquest 135mb removables (in
addition to 2 x 130mb SCSI HD's) via blackbox; arguably more storage
than I could reasonably use.

Additionally, I'm using Ape ProSystem 1.18D via a really old all-in-one
Compaq Prolinea Net 1/25S system running MSDOS 6, Novell Client32
(connected to a NetWare 6 server) for high speed access to all my
ATR/XFD files.

One day, I'll take time to finally convert all my old 5.25 and 3.5 disks
into .PRO, .ATR or .XFD formats.

How those Syquest removables interfaced?
Seems like my Sparq drive is a Syquest.
You must have more than 8 drives, and
more than 16 megs per partition. My IDE
was/is the only thing I think does more than
16 meg partitions.
I use APE also, don't hook up my MIO hard
drives.

    Just an FYI, this page appears completely blank in Firefox. I was able
  to view it in Internet Explorer though.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.

There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

RELATED NEWSGROUPS:

I only use two. The 5.25" floppies and the cassette tapes. They count
as removable media, don't they? ;)

I wish I had that. By the way, how many kilobytes per second can the
Atari computer handle?

> One day, I'll take time to finally convert all my old 5.25 and 3.5 disks
> into .PRO, .ATR or .XFD formats.

When that day comes in my life, I will go through the cassette tapes
and the floppies from my early years of BASIC and machine code
programming, and store all files on my home PC.

Anders

I have a 300mb Fuji or Fujisu (diff?) SCSI drive, and a Syquest 200mb removeable on my TI-99/4A (I just recently acquired another 6 200mb disks for it, $1 a piece + shipping).

I have a spare 200mb removeable, and two spare 300mb hard drives.

Due to limitations of the device driver, you can only address 250 mb. I've not found a drive more reliable than these SCSI drives. I did have two hard drives setup, but it was more than I needed, so I'm just keeping them as spares. The only thing I found that was important was to NOT reformat the 44mb Syquests on a 200mb drive - it renders them useless (at least on the 200mb drive). I have/had a few I did that to, not sure I kept them. Here is a good link:
http://www.kassj.com/articles/SyQuest.html

To the other poster with a Sparq - I had the parallel port version - I traded for the two 200mb Syquest drives and a few disks for them. I got the better part of the deal. The Sparq was a 1GB version, but had the "Iomega" click of death problem (I've never had that with my Iomega ZIP drives) where it ruins your disks... it would spin up and down, not eject, etc.

I was honest with the person I was trading with...

I have the blackbox configured with about 30 x 16mb partitions spread
across the various devices configured.

I mostly use APE for backups and for using it a print que, for printing
to a network connected laserjet.

I just obtained a SyQuest 88 for the ST.
>From this post and the URL link it seems that you can't format 44meg
cartridges in an
88meg drive.
Is this true?If so,I guess I don't want to buy any 44meg cartridges.

I didn't read it with respect to 88mb drives, but I did have problems
on my 200mb system.
44mb cartridges are slower on a 200mb drive, and if you format them

they no longer work...

Well, its December, and that means we're giving stuff away for the Christmas
season!

First up, our usual 3 month subscription to ST Magazine.

Next, we're giving away an Atari Mega STe motherboard!

Last, but not least, is an Atari 8bit game, Guderian.

Our winner for November 2006 is Sauron - he won the 3 month subscription to
ST Magazine!

I've decided that I need more specific information about what users want,
when it comes to our monthly prize giveaway. So there is a new menu option
from the mainmenu. It's "M" for Monthly Prizes. Users who wish to register
for our monthly prize giveaways should pick this option and choose whatever
prize they are interested in. Your choices will be registered to a logfile
that I can check at the end of the month. Users can register for as many
prizes as they want, but please only register -1- choice per item, per call.

You can register multiple prizes in one call...   Thank you all! :)

Congratulations to our winner, and good luck to everyone on this months
prizes! :)

Anybody purchase the Atari Lynx collection on CDROM from
thepelican@sympatico.ca?

I just bought some 8bit and Lynx gear off eBay, and one of them
contained a flyer for 90 playable games on a single CD.

2006.10.25 added: Markus Roemer / R.I.K. of Kaisersoft, Top Magazin 2006
2006.10.22 trub: SpartaDOS X 4.39RC, intSDX128, intSDX128 "flash",
AtraX SDX 128

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Hi James! Long time no see! :-)

You've touched upon an area I'd like to investigate but haven't yet gotten around to. Any "surprises" or "tricks" involved in getting SyQuest 44M drives hooked up to the BlackBox? I've got a BB and am hoping it's as simple as plug-and-go, but... For one thing I wouldn't know what "drive geometry" to tell the BB. 2 surfaces, maybe, but... then what? :-)

> Additionally, I'm using Ape ProSystem 1.18D via a really old all-in-one

Hoping to set up an old PC here as a DOS box and run something like that.
In my copious free time...

> One day, I'll take time to finally convert all my old 5.25 and 3.5 disks
> into .PRO, .ATR or .XFD formats.

I've done most of the first 200 or so of my own disks; only about 1000
more to go...

Of course, this doesn't count the bad-sectored or otherwise-copy-protected
disks. I've been out of the loop for a while; does there yet exist a
solution for imaging-and-emulating such disks? I'm thinking it could be
done with a track-, rather than sector-, based disk emulation on the
emulator side, and a track reader using something like the Archiver
device, on the Atari / disk-imaging side. Anybody done it?

Cheers,
    Chris Chiesa

Now THAT's an interesting idea. I'd like to hear more about how to do this sort of thing. (I don't have a network-connected printer (yet), but do have an old laser printer going to waste. Heck, for that matter, I still have my old Atari-compatible dot-matrix printer sitting there going to waste. Don't know whether it would even operate at this point... let alone whether I could still get a ribbon for it. Anybody?)

That reminds me; I also have an external SCSI Zip drive (original 100Mb type). Any advice on hooking THAT up? Same questions as I just got done asking about the Syquests...

Back in the 90s I worked with VMS workstations, and one thing we worked hard at was making it possible to transfer files among various kinds of computers (mainly Macintoshes) and the VMS machines. Sometimes we didn't have enough actual drives to go around, or we just plain needed to reconfigure for a different project -- and it often turned out that an external SCSI drive that had been used on a Mac would come up nonfunctional on the VMS machines, yet continue to work on the Mac. After much hair-pulling we found that the Mac SCSI driver was quietly setting two configuration bits (just TWO SINGLE BITS!) in one of the low-level SCSI "mode pages" in the drive, and the VMS SCSI driver would reject a drive with those two bits set. We eventually got a utility program for the DEC Alpha (as opposed to VAX) version of VMS that would let us edit the mode pages and clear those two bits, making the drive accessible to

VMS once again.

So why tell you all this? Because I currently have a 44M SyQuest drive
that won't work on a VAX/VMS workstation in my basement, but DOES work
(aside from filesystem issues, anyway) on my Windows 2000 PC.
Unfortunately I don't have the VAX version of that
mode-page-investigation-and-editing tool, and haven't been able to find an
equivalent program for Windows. And I thought I ought to spread the word
that this sort of thing is possible, in case one of you guys tries to use
a SyQuest drive that works with a PeeCee (or a Mac!) on your Atari and
runs into a similar problem. I'm not saying you WILL, but I'm concerned
that you COULD, and now you know what kind of thing might cause it and how
you might try to fix it if you can find (or write!) the necessary software.

One of these days perhaps I'll get around to writing such an application
myself, but even the documentation of how to read/write the mode pages on
any computer I know how to program (VMS, Windows, Atari, Amiga) is scarcer
than hen's teeth. So if anybody here has a handle on any such things, let
me know. You scratch my back, I'll (try to) scratch yours.

Chris

No, but it sounds like I'm going to have to check it out!

_90_ games? How many (if any) are bona fide Atari games (at risk of
copyright/piracy issues) and how many are third-party after-market stuff?
I know the programming information has been floating around for a few
years now... In any case, it sounds very interesting.

Chris

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Hey everyone - don't forget about the weekly Atari chat tonight. Official
gathering time is 8:00pm CST, and you have 3 options for getting in:

- Use your favorite IRC client to connect to irc.newnet.net and join
channel #atari.

- Telnet from your 8-bit or other machine to irc.atarichat.net

(216.37.55.109) and login as "atari". This will get you into the chat
without the need for an actual IRC client.

- Use the Java applet found at http://www.newnet.net.

If you can't make it around 8:00 tonight, or if you would like to stop in
other times, feel free to drop in anytime. There are generally a few
lurkers hanging around, so you may catch some good coversation at any
random visit.

I was hoping the place I work would've thrown away a Jet-Direct box so
I could put my old Epson AP-3250 on the network and print to it from
different computers. It would have been fun.

Wonder what happens when it receives requests from different systems at
the same time?

Well, just put some old PC together (in my case, a 1980's era 486), get
APE (I use 1.18D Registered), and just parallel connect your laserjet to
the PC.. Voila, instant laserjet printing from your 8bit Atari..

Has anybody played Synapse Software's "Shamus II"

recently? It is a super cool game with lots of
action. Revisiting it, is recommended.

Anders

When using the Blackbox at least, I can't format, but I can 'erase'
them..

If you can get the head/cylinder count, I'm guessing you should be able
to access it after you've partioned it. Are you using a BlackBox or MIO?

As to prepping Sysquest drives, set them up on your blackbox as follows
(44mb):

Heads 2, Cylinders: 1275, Type: 7, 512k Sector

Then just prep. using FMTDIR.

Any questions?

Yes, I remember liking it better than Shamus in the 80s mainly because
I couldn't finish shamus. Case 2 was easier, but it's incredibly
annoying if you fall in the wrong area to have to repeat 1/2 of the
game.

Synapse produced some very good games in their time. Shamus was a very
popular title of theirs. Zepplin was very fun along with Nautilus. They
had a very good line of games. They also produced an assembler that wasn't
too bad but was overshadowed by MAC/65 and Atari's Editor/Assembler.

Hi,
Are you sure that this has a 50 Pin Centronics end. Just asking because I
would like to know which printer it will attach to. I have a couple of
printers but they're both 36 pin Centronics. Maybe a Scsi printer for the
ST line.
RoyE

You're right- it's a 36 pin. The package says "Atari to Epson"

Thanks

I agree. Pharaoh's Curse was one of my all-time favorite games.
I still play it periodically.

Mario

Hi,

http://www.retrogames.cl/sio2lpt.html sees this Web.

They describe interface SIO-2-LPT.

The author corresponds to another person, but they describe it well.

bye,
SACACI

I do too but that stupid bat still annoys the crap out of me. It's
much easier on an emulator since you can use the keyboard, especially
in the green room with the hangman prize

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

For those of you with whom I had such a great time chatting Wednesday (or
was it Tuesday?) afternoon / evening, know ye that I DID TRY to get in for
the Thursday chat last night, but wasn't able to. My Opera-web-browser's
"chat" facility -- which turns out to be an IRC client -- sat in
"Connecting..." for about two hours and NEVER DID actually connect.
Dang. Any speculation on whether the problem is at MY end or the OTHER?

This won't stop me from continuing to try, but whatever's going on MIGHT
continue stopping me from SUCCEEDING. :-(

Hm. I don't THINK it was I who said that -- looks like I was just quoting
somebody -- but now that you've mentioned it, what would be the DIFFERENCE
between "formatting" and "erasing" a 44meg SyQuest disk, in the sense you
mean it here? And what BB operation corresponds to "erasing" such a disk?

So much to learn, so little lifespan!

Nope; that seems straightforward enough.

Now, wouldn't it be nice if I could then pop the cartridge out, put it in another drive attached to my PC, and immediately use it as a disk drive with an emulator? Anybody doing that? :-)

It was _me_ who said you couldn't format a 44mb in a 200mb drive. I'd done
it, then the disks wouldn't work anymore, _then_ I found the link.

Of course this wasn't on an Atari, but I don't see the difference.
However, the difference between "erasing" and "formatting", the latter
tells the SCSI system to write down new tracks, the latter just sets up
your file system on top of the drive.

If you are familiar with PCs and floppy drives (remember those?), it is
the difference between a "quick format" and a "full format".

   On Tue, 12 Dec 2006 at 13:48 -0800, lobocordero scribbled:
->>>For sale: 8 foot 15 Pin DB-15 to 50 Pin Centronics printer cable.
->>>New old stock. CompuCable brand. $5 plus postage.
->
->You're right- it's a 36 pin. The package says "Atari to Epson"

   Sounds like a good deal. 12 years ago I had to go to all the
effort & trouble of making one like this. But isn't 8 feet a mite
on the long side? In the olden days we used to worry about signal
degradation.

The group "Makers Of Video Games" will be releasing a game code named
Tic Tac Toe Plus.

Tic Tac Toe Plus is a game which will utilize the same simple rules and

gameplay as the very popular Tic Tac Toe game, however, there will be
added features, rules and variations in the way in which the game is
played. It is expected to be more strategic and

A demo of Tic Tac Toe Plus will be released on 27 Dec 2006 for
commercial playing.

Reply to reserve a demo copy of Tic Tac Toe Plus on its date of release.

I am selling my rare Atari 1400XL prototype and thought I'd give the
newsgroup a shot at it before I list it on eBay as it was purchased
through the news group almost five years ago. It includes the rare
Atari 1400XL power supply as well. The computer is in like new
condition but is missing the case label as most Atari prototypes of
that period are. I have not taken the time to modify an Atari 1200XL
label as others have done. The computer works fine but the keyboard is
in need of new/cleaned contacts. It uses a standard 1200XL keyboard so
swapping one in may be the easiest solution. I will be listing the
computer on eBay December 28th if no acceptable offers are made. Here
are some photos:

The original Missile Command was an arcade game machine
with a trackball type of control over the crosshair type of
target symbol that the player moves across the screen.

So is it on the arcade version possible to quickly move the
crosshair from one spot to another on screen by spinning
the trackball?

If that is the case, the home computer version of Missile
Command sure must be less exciting than the arcade. Moving
the crosshair at constant, slow speed with a joystick disagrees
with the concept.

Anders

The arcade version seems to give you more control of the screen's
pointer using the tracker ball because the user can use the tracker
ball to move the pointer freely in much more directions than the home
computer version and also the speed can be controlled or maintained.

The arcade version sounds much better, however it may take some time to
become acquainted with the tracker ball. It will take a while.

Yes, also you only have the one fire button. In the arcade version you
could shoot from the closest base and since the trackball let you go
quickly from one side to the other this could be a good way to save
yourself.

Missle Command is the only program I am aware of
that uses the Atari 8-bit track ball. It is much more fun than using a
joystick. The Atari trackball for the 8-bit also allows use as a substitute
joystick mode.
You need a trackball to play MC most fun.

Does the Atari trackball detect ball spin speed?

You would need to acquire the version of the trackball that has both the
joystick emulation and trackball mode switch on it. In trackball mode
(which the 8bit Missile Command supports) direction and velocity is
detected. If you play it in joystick mode than it's going to move at a
constant rate in the direction your moving the cursor.

Right but the 8 bit will accept a ST mouse instead of a trackball.

IMO: After you get used to the mouse it is the best version and you can
rack up some really high scores.

I constructed a time machine and went back in time 100 years and bought
several houses for a penny. So, by the time I was conceived, I was already
a property magnate.

My butler used to bring me am-biotic fluid on a silver
tray whilst I was in-utero.

I was the only sperm that already owned a ferrari.

After I was born, I paid someone else to be circumcised for me.

My first bottle was 100 year old scotch.

instead of a dummy, I used to suck on cuban cigars.

Hi,
If you mean DOS instead of OS. This depends on which DOS you are using:

With Atari Dos an AUTORUN.SYS file can be run before Dos is entered.
With MyDos an AUTORUN.SYS file can be run before Dos is entered.
            Also FILENAME.AR0 will work with the later versions of MyDOS.
With SpartaDOS or BEWEDOS a batchfile will be run to start your command
file.
           Also DOSXL a batchfile is needed to run a command before the Dos
prompt.

Regards,
RoyE
PS: give a sample of what you want to accomplish for more clarification.

You might want a menu loader boot disk, like
for many games that can't load from DOS because
they overwrite DOS.
The menu loader boot disk will put a very minimal
loader in place, then give a list of filenames to
load, which you select a letter A, B, C,.
You mention wanting to load a 'system commander'.
Perhaps you might want to be more specific what
you want to load and run. The closest thing to a
'system commander' I can think of is a machine language monitor, like
Omnimon, which is an
alternative OS on a chip, rather than a boot disk.

Anybody have more of those Rob C Musical Menu Makers? I have One, Two, Five and Six, so I guess there's more

Also wonder what music Gilbertson wrote
Alternate Reality both
Tail of Beta Lyrae
Passionately
Monster Smash
Mr. Robot
Cosmic Tunnels

I think all of the above is him, but if you know any more, please let me know!

Take Atarian care

Apparently, it is not easy to find an institution willing to
accept a large lot of what they see as *very* specialized
equipment.

A "typical" technology museum is much more interested in breadth
(Apple, Commodore, Sol, etc., etc.) than in depth in a single line
of machines--even if it is the single most influential machine in
the pre-standardized world of computing. ;-)

Apple II's just need to outlive all of those "other" platforms. We
already have an advantage from all of the surplus machines cast off by
the education industry. Now all we need is a climate controlled bunker
in northern Canada to stash our machines once we kick the bucket. 500
years from now, when nothern Canada will be a tropical paradise, we'll
have prettier piles of plastic, metal & fiberglass dust than anyone
else. We'll show those rat bastard commies then!   :-P

I remember those :)

I used to just sit and listen to them and not play the games. Could you possibly post the ones the you have. I would love to listen to them again.

Cheers,

JohnP.

I'm sorry meyti, I can't follow what you want, what
you've already done, and what you want to do.
You say you want 'write run', means you haven't
written it yet, then you say 'i wrote' indicating you
already wrote the program. What program?
What program do? What language you writing in?
If you wrote a 'boot loader', then you must be
writing in machine language and have the ability
to alter the boot sectors of a disk.
The OS will execute when you turn on the computer.
If a disk drive with disk is there, it will load the
first sector, extract information from sector 1 and
then continue with the boot sequence.

Guys,
Vintage Atari 8-Bit games ending in around 12 hours - take a look!

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZcawley1

Items are in the UK, and in Pounds Sterling (shipping will be slightly
higher to the US/abroad), but you will be hard pressed to find some of these
in this condition again, have a look through, lots of hard-to-find titles
(most new, some sealed).
I will be listing approx. 90 more titles this evening, the bulk of them
being HTF Atari and C64 titles, mainly on disk - there will also be Vintage
PC, Amiga and Atari ST - I am not kidding, you have to have a look at
these!!!
Cheers,
Paul

Been so long I probably have a few details big time WRONG here but I am sure someone will jump in to correct me.

Easiest was is to have a disk with a MEMSAV on it, very important or DOS may step on your code. Compile your code so it is memory resident and go to DOS. Once in DOS do a binary save<Option K> and give the file name autorun.sys, address range to save and the initiate address of your message and the start address of your code.

You can have more then one init address in a file if you combine them using the copy /A<ppend> option. Favorite trick of programmers was to run the message to screen first followed by the loading of the code, that way you didn't have to add a delay so people could see the message.

There's other ways of doing it. For instance you can load your binary with the /N option from DOS so it doesn't run and do the save/init from there. I liked to compile to disk and just stick in the init address at the end of my code. There is no one right way to do it but 3-4 different ways that all get it done.

The music on the title screen of Cosmic Tunnels was really
something special. Both the melody and the original
swaying not so square waveish voice.

While all of us beholden to the "One Ring" have to live with this to
some extent, it's pretty common in Japan to find a girl with a
childhood gaming background.

My wife complained a bit about the price of the Mac mini "we" purchased
... until I had it playing old Famicom (NES) games and MAME. While she
beats me at Popeye and a handful of crazy Japanese games, I'm content
to hand out lessons in Robotron.

So I like mine just the way she is too. ;-)

Cheers,
Nick.

Hello All,

I am selling electronic copies of the PPP 4 Games Pack (Minesweeper, Glaggs
It!, Rubberball, Bombi) on eBay (which includes ATR and DCMs of the disks
and text versions of the manuals) for just £0.99 (less than US$2). You can
buy one on eBay now:

UK/Europe: http://search.ebay.co.uk/_W0QQsassZdeangarraghty

US: http://search.ebay.com/_W0QQsassZdeangarraghty

Full info on the games and what is included, and how the product is sent to
you is in the listing.

Dean Garraghty

You need an emulator of course, but the link to my new page is :
http://games.nmi.no/atari/a8bit.htm and go to Gary Gilbertson page
My main page is at : http://games.nmi.no/

Found a few other collection he made too, for Antic and two AMP demo disks.

Now I want the music from Alternate Reality :: The City

Take Atarian care

BTW : It might not be finished uploading yet, so if you don't get the page,
try later

Is there a way to use FTP to download from the Umich archive? If so, where
do I log in and as what?

Thanks

I want to keep one file with the contact info (email or whatever) and the
pages to link with that part. Is that possible? That is one small file with
the HTML code with email, linked to a lot of pages. So when I edit the email
info, all pages are still correct.

Thanks for any help!

hi
I Wrote in language machine =>

```
mov ah,a
mov bh,0
mov cx,5
mov al,41
int 10
```

I make ".bin" file and wrote the file into boot sector of floppy
<W 100 0 0 1>

and i want after print the "aaaaa" go to OS
I must use which command?
thanks a lot...

I have to do some work on the climate control, but I've already started
quite a stash in my garage... er, bunker.

This is assembly, not machine language.

> I make ".bin" file and wrote the file into boot sector of floppy
> <W 100 0 0 1>

You're in the wrong group then. This is for 8 bit atari's, they use a
6502, and not a 8080 or Z80 or any derived processor.

So long,
     Thomas

Your code is for x86 machine, not 6502.
So you're using an x86 assembly language.
> I make ".bin" file and wrote the file into boot sector of floppy

Above looks like Omnimon command, not sure.
> and i want after print the "aaaaa" go to OS
> I must use which command?

I think you might not be in the right group, this
is x86 stuff. Are you using an Atari 8-bit?
Good Luck

Thanks, but that's web based too. I would like FTP so it can download all I
don't have. Easier to continue!

Thanks anyway

Would this work.... It is still web based but.. similar to ftp: indexed
directory..

http://www.umich.edu/~archive/atari/8bit/

depends on the method of download..

RoyE

If you're interested in a quick way to download the contents of the web
site, you can use wget (http://www.gnu.org/software/wget/wget.html). e.g.
"wget http://www.whatever.com/whatever/blah -r" would grab everything found
at blah and whatever it links to (such as subdirectories full of archives).

Alternatively, use Firefox and the Down(load)ThemAll extension. I did ;)

It can be used to get 'all linked files' from a webpage. You still have
to open each page, but it beats clicking on several hundred files.

Kind regards,
Wef

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,

California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

RELATED NEWSGROUPS:

Hello Vidar, Michael. Below is the link for Umich Atari Archives. For your Web Browser. I regularly do FTP as well as Telnet. I may be able to help with FTP although it would be easier if you sent me E-Mail. Thanx! ===Ben===

www.umich.edu/~archive/atari

Below is the same link where you can find Atari and other Computers.

Wow, what a retro question. There was a time when that was maybe one of the most frequently asked questions here!

I can't find any trace of FTP support at the long frozen UMich archive, nor can I find a UMich mirror supporting FTP. You may have stumped us! Hopefully one of the many other suggestions will work for you.

Vidar,
   I think you are looking for Server Side Includes. IE:

<!--#include virtual="insertthisfile.html" -->

That should do the trick.
Isaac

There are any number of ways to do this but it depends on what
facilities your hosting company offer or what tools you are using. Can
you provide more info?

If you are using something like Dreamweaver or Frontpage you can use
templates where one change will fall through to all pages based on the
template.

Iain

I think wget is his best choice. Or use 'off line browsing' features,
depending on the browser hes using.

Thanks for all the hints. I am using (dare I say) MS Internet Explorer. What
is wget? Linux/Unix command?

I seem to remember back in the old days, I used something called mget
(Multiple get?) at the school where my friend went.

Take Atarian care

Hi Guys,
I am after the Broderbung title Stealth, on Disk.
Does anyone have a boxed copy they don't mind parting with?
Cheers,
Paul

Howdy Vidar

> > If your PSU is good (+12, +5, -5 VDC IIRC)....

You absolutely need +12 and +5, but the third voltage can be -12 as well
as -5 Volt. I'm using -12 Volt as most switching PC power supplies have
-12 Volt on some wire. Bob Puff told me you can use either.

> Does Bob stilll repair them?

He'll probably try to diagnose your problems on the phone. He's really
good at this. He'll take time for you if you call. Emailing him might
not result in you getting an answer anytime soon.

BTW, on some older manuals, an old area-code is used. Your best bet is
to check the site (www.nleaudio.com/css) for the right phonenumber. And
Bob is very kind and patient on the phone, even if you stammer like an
idiot. (been there, done that. :-))

Greetings

Mathy

Hi there. In my collection I have an Atari600XL. Unfortunately, like a few
other things I have it doesn't work.

On turning it on it displays a plain brown screen. That's it. Totally
catatonic.
Any ideas what it could be? Unfortunately I know little about the
specifics of the hardware in it.

Any help or ideas would be appreciated.

Thankyou.

Hi Tristan,

that can be caused by a bunch of dead ICs.

Check these:
U2-5, U18, U19, U28, U30

Hi,

Most chips are socketed in the 600xl, so removing or reseating them
might help.

Rory

I was afraid of that.
I'll try reseating like FujiMan said too. Although I think I may have done
this a while ago anyway.

Thankyou for your help.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Paul,

   even though your using a SCART connector, you will *not* be using the
RGB signal pins, but the composite video pins. The composite video from
any US Atari will be NTSC format, whereas your TV expects PAL. Having
said that many modern TVs sold in the UK are actually multi-standard.

The difference between NTSC and PAL is the way the colours are encoded,
and this may explain why they appear washed out.

My own TV accepts PAL or NTSC. When I played back a US DVD on my DVD
player the colours were washed out, which I assumed was because it was a
TV series from the 70's. However when I entered the menu on the TV, I
now had control over "TINT". This is a bit of a giveaway that the TV has
detected a NTSC signal. PAL TVs don't have a tint control.

I was also surprised when I tried a US videotape in my video recorder,
that not only did it play back OK, but understood all three tape speeds
(LP, SP and EP).

regards...

> SIO2IDE, and probably spray paint the whole damned thing black and let 'er
> rip!

If you need a SIO2IDE interface version 3.x, contact mega-hz (Wolfram Fischer).

BTW, I saw one of Wolfram's 1050's. It has a harddrive, a SIO2IDE 3.x interface inside and .... the viewer of a camera. Yep, that's a CRT, black and white picture, about 3 to 4 cm diagonal. That's slightly over an inch to one and a half inch. The picture displayed on it (which comes from an "external" XL or XE) is crystal clear.

Greetings

Mathy

BTW mega-hz has his one site, but my browser couldn't make contact. Try
: mega-hz.no-ip.com

Hi Vidar, if someone wanted to buy a BB, Lance at Video 61 can order from Bob Puff. I dont believe Bob will sell directly. I also believe Lance can repair Black Boxes. Thanx! ===Ben===

Guys,
*** New stuff added! ***
Got some vintage Commodore / Atari / Infocom games from the loft and up on
eBay right now.
Items are in the UK, and in Pounds Sterling (shipping will be slightly
higher to the US/abroad), but you will be hard pressed to find some of these
in this condition again.
Have a look through, lots of hard-to-find titles (most new, some sealed),
will be hopefully adding more of these in the coming weeks, on various

formats.

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZcawley1

I am not kidding - you have to have a look at these!!!
Cheers,
Paul

Hello All,

I am selling electronic copies of the QUICK programming language on eBay
(which includes ATR and DCMs of the disks and a PDF manual) for just £0.99
(less than US$2). This is a promotional price to 'test the waters' with this
kind of distribution, so if you want to take advantage of it, you can buy
one on eBay now:

UK/Europe: http://search.ebay.co.uk/_W0QQsassZdeangarraghty

US: http://search.ebay.com/_W0QQsassZdeangarraghty

Full info on QUICK and what is included, and how the product is sent to you
is in the listing.

Dean Garraghty

Right here!
Actually I am in the process of moving so I do not know what's going to be
happening for the next couple of months. The BBS is down most of the time
now but I hope to have it back up after I get settled in the new house.

It is occassionally up during the week now but mostly not.

Hi Jeff.

I'm interested in the Appl2, Coco and CP/M things you have.

Please send details when it's convenient for you to my gmail email
account.

For my own interest, I've recovered several Apple2, //e and GS models,
several Mac Models, a TRS-80 CP/M BOX with two 8 inch floppy drives
AND
good bootable floppy diskettes! (that was fun to see it still works!)

I await with baited bits! :)

be well.

I do not have a TRS80, that's something I would really like in my
collection!

Let me know okay?

Thanks

You really should have a look at this video. It was a great meeting.

You can also look at YouTube for some video's from boschreurs

Greetings

Mathy

Yes. You will regret it forever. I did so many years ago and still miss
the stuff. Sure, you can replenish the supply later - but it still
won't be the same stuff really.

If you don't have room, rent a storage shed for $50 a month. I do. I
have loads of useless crap. Maybe one day I will be rich enough to buy
a house. Then I will collect even more!

Howdy folks

> Hi Vidar, if someone wanted to buy a BB, Lance at Video 61 can order from Bob
> Puff. I dont believe Bob will sell directly. I also believe Lance can repair
> Black Boxes. Thanx! ===Ben===

That's new to me. That fact that Bob won't sell directly that is. What
I do know from a reliable source, is that they have enough parts to
assemble the FloppyBoard.

But Lance is a good guy. And a lot more active in the 8 bit scene
nowadays then Bob.

Greetings

Mathy

I have 'The Agony and the Ecstasy' Episode 4 from PBS but would like to get the complete 4 part series.

computer related on dvdr:
Triumph of The Nerds. 180 min PBS Host Robert Cringely. 96 KQED
Nerds 2.0.1 A Breif History of the Internet. Host Robert Cringely.180 min 97 KQED

I have lots of vintage MTV/VH1. Johnny Carson, Streets of San Francisco, Night Flight, and some Horror documentarys. just updated my trade list.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Very, very true.

> If you don't have room, rent a storage shed for $50 a month. I do. I

I got a lot of cardboard boxes and stacked them in the closet. Some of the
larger systems I stuck under the bed. Now that I have my own place I'm
slowly extracting and rebuilding my old systems. The same ones!

You have to be rich to buy a house?

Shit, I owned my first house at age 30 and don't consider myself to be rich
by any stretch of the imagination.
How much is an average 3 bed 1 bathroom house in the US on 820m2 block worth
in a reasonable neighbourhood?

Well, maybe if you live in that house alone. But if you are married to
a woman, beware she will not allow a huge amount of antique computers
to be stored there. Unless you are fortunate to find one of those very
rare women who are also Commodore geeks. This is highly unlikely
considering when Commodore's were populare in the 1980's, very few
girls cared anything at all about computers.

> ****, I owned my first house at age 30 and don't consider myself to be rich
> by any stretch of the imagination.

I bought my first house when I was 26, and I still live there.
However, both my wife and I work full time in order to afford to live
there.

Continuing on about the collection, though. My collection is about as
big as it will ever get unless we move to a new house with a lot more
storage space. I have almost every 8-bit commodore ever made (except a
PET and the CBM machines) and also have a lot of Apples and Amigas.
But they rarely see the light of day. Unfortunatly, when I see a

Commodore 64 being thrown away somewhere, my heart tells me to save it
and preserve it. However, I have no more space for it. And I know
that when I die, it is likely my children will throw the stuff away at
that time anyway. So I would only be postponing the inevitable, and
wasting valuable space in my house in the meantime.

I bought my house at age 24 and it was paid off 6 years later with help from
my other half who also works full time :-)

I would be tempted to pick it up and at least save any socketed chips. They
don't take much space and could be important in the future when supplies run
out.
Then again, where do you draw the line...

Wow, welcome to "comp.sys.rich.people".

My wife and I just bought a house/land, $87,000, payment is $780 a month,
we have 3 kids, 3 cars, a dog...and there is no way in the world we could
ever pay it off in 6 years. (and thats with our combined yearly income of
about $75,000). :(

I am currently working on a list and will be posting it to my website
shortly:

http://www.rtdos.com/list.txt (dead link right now but should be up sometime
next week)

so if you are interested in my collection, please check there first to see
what is available; its on a first come first served basis (recipient must
pay for all shipping up front) however i will honor the best offer (i've

already recieved hundreds of emails and phone calls); i don't like doing this (i'm already regretting it) but i absolutely have no room (or money for storage) that i want to give my collection someone or multiple someones who appreciates these retro systems.

i have no intentions of leaving the retro community (my alt os for games based on the classic systems is still my priority); currently i'm looking to download (or get someone to donate cd's or dvd's of) emulators, sources, bios's, roms, programs, etc. that pertain to these systems that i have (or had at one time).

its like giving a puppy or a kitten up for adoption, you want to make sure that they get a good home; thats the way i feel with my retro stash (of course i am to blame if nothing works for i kept my collection in storage for 10 years); basically i want to give my collection to the community (i will part out,but each recipient must pay shipping in full up front) as my collection is as much a part of me as it is a part of the retro community.

so if anyone wants to donate cd's or dvd's of collections of programs, emulators, sources, drivers, bios's, roms, etc. of anything retro related (even if they are not to recieve any part of my collection) i'd appreciate it (as i said i have no intentions of leaving the retro community once my physical collection is depleted). :-)

right now i have about 40 more of appx. 50 boxes left to go through, i have about a dozen or so monitors (composite so they should work with nearly any system with an rca jack); several boxes of ibm pc compatible cards (already claimed by a local pc repair service), several printers (atari, tandy, commodore, apple), tons of books and manuals, etc. (don't worry i have another storage area that'll i'll be going through once the stuff in my house is depleted)

I bought my house at age 10, no need to take loans and on top of that, I
have lots of saved money.

My wife loves my huge collection of home computers and video
games. Recently, she convinced me we could squeeze a third Asteroids
arcade game machine in the master bedroom.

Wait, there's more! Our kids wear Commodore and Atari t-shirts when
they go to school. The dog too likes retro computing, always wearing his
tiny vest with a superb handmade Amiga logo.

We've got two brand new Lexus jeeps professionally painted with Pac
Man and Donkey Kong artwork.

I will be back in these newsgroups later, with more information on the
proceedings of my simple, still satisfying life.

Anders

I'm very interested in any of the CP/M send me a list.

Greetings everyone!

Here is the lucky and the proud winner of this months prize at The
DarkForce! BBS:

October 2006
1. ST Magazine - Dew-It wins the free 3 mag. subscription

Congratulations to our winner!

Also, here is next months prize:

November 2006
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Good luck to all! :D

Hello to all my Atari cousins!

Below is the announcement I posted to other newsgroups, but it would be
good to see you there, too! :-)

Come one, come all to the Vintage Computer Festival 9.0, Nov. 4-5, at
the Computer History Museum in Mountain View (San Jose area),
California. http://www.vintage.org

Nestled in the heart of the Silicon Valley, the Computer History Museum
is full of analog and digital computers harking back to as early as the
1940's.
http://www.computerhistory.org

Join the 500 to 700 VCF attendees to listen to the speakers (Steve
Wozniak!), marvel at the exhibits, and buy the vintage computer goods
of your dreams. The Fresno Commodore User Group will have its usual
demonstration/vending table. Come and meet me and FCUG members, Ed
Hart, Clark Murphy, Bill Ward, and Mitch Zollinger. Who knows who else
you will see wandering through the rooms? (Amigan Dale Luck is a
regular VCF attendee.) Come to our table and play with a VIC-20
system, a SX-64 system, NTSC and PAL C64 DTV's and the Hummer DTV, an
Amiga CD-32 (this time with several different discs), and a Vectrex
(hey, what's that doing here?). As usual, we will have C= hardware and
programs for sale - C64's, C128's, 1541's, 1571's, a SX-64, On the Edge
books, and more. As usual, we will have cakes, cookies, and punch to
hand out to anyone who asks. As usual, there will be other vendors who
will have Commodore and Amiga items.

New for this year, Bill Ward will be bringing a video projector and screen on Sunday so that we can have big-time Commodore/Amiga gaming! Also for the first time, I will have an exhibit with a very good-to-excellent condition Commodore PET 2001 with plenty of programs for it to run. Also, check out the strange and mysterious, outboard "sound box" for the PET. Larry Anderson and your PET/Flash Attack exhibit, watch out! :-D For more information on my exhibit or the other exhibits at VCF, go to http://www.vintage.org/2006/main/exhibit.php

Car already packed for VCF,
Robert Bernardo
Fresno Commodore User Group

Not a good answer, more what my faulty memory pulls up.

If you are using ANTIC mode 7 then you are right, you only need 240
bytes. If you are using BASIC GR.2 then BASIC set up a GR. 2 screen with
a GR. 0 text window on the bottom. I seem to recall the kicker is: Even
if you eliminate the text window by using GR. 2+16 BASIC still sets up
space for a text window. It's 3 or 4 lines of 40 characters per line
with a LMS commands so that bulks the RAM usage up a bit.

I think there actually was a use for this. Something like you could have
a GR. 2 screen, save the text window location, then go to GR. 2+16 to
make it disappear. You could then add info to the text window and have
it appear instantly by just switching the text window in and out.

> I on track here?

You want to write directly to the screen. Screen memory starts at
PEEK(88)+256*PEEK(89)
There isn't a 1:1 correlation between characters and their screen
counter parts. I assume this is because of ASCII(32) being a space but
you want a zero in screen memory so as to display nothing. ANTIC mode 7
uses high bits of the character to pick what color/color register is
used for it.

Thanks for the info Rick. I am going to reduce the memory I am storing
for the screen to just the 240 bytes. I have set up my own Display
List, so I am picking where the screen memory is located, as I have to

point to it in the DL. Then it's just a matter of popping my data onto the screen. When starting the code to my program I was using the gr.0 screen to display the data so I could debug it, and using the CIOV routines to push the data out. Now, I can just store it right on the screen memory locations. Looks like I am heading in the right direction. I just really wish I had put this much effort to learn machine language, back 20+ years ago. It's really nice to finally conquer it though.
Isaac

Guys,
I just imported an NTSC 130XE, my question is that when I use it, the colours appear different on the screen -best way to describe would be washed out- compared to my PAL 130XE.
I could have understood this if I was running through RF, but I am using a SCART cable out of the monitor jack.
Admittedly the picture is far better on my CRT TV as opposed to my LCD one, but the colours are still out.
By comparison, my NTSC NES looks the same as the PAL on (just minus the borders and slower speed!).
Any ideas, is this normal?, I think it probably is, but wanted to check!
Cheers,
Paul

Guys,
I am also about to offload some 8-bit titles, but before I do, wondered what
I am likely to get for them on eBay (all disk versions).

Ogre (Origin, still shrink-wrapped, mint uncrushed),
Zork 1 (Infocom, complete but not wrapped, sticker on front),
Zork 3 (Infocom, still shrink-wrapped, mint uncrushed),
Starcross (Infocom, still shrink-wrapped, mint uncrushed),
Spellbreaker (Infocom, still shrink-wrapped, mint uncrushed),
Sorcerer (Infocom, still shrink-wrapped, mint uncrushed),
Seastalker (Infocom, still shrink-wrapped, mint uncrushed),
Ballyhoo (Infocom, still shrink-wrapped, mint uncrushed),
Deadline (Infocom, still shrink-wrapped, mint uncrushed),
Suspect (Infocom, still shrink-wrapped, mint uncrushed),
Night Mission Pinball (Sublogic, still shrink-wrapped, mint uncrushed),
Alternate Reality (US Gold, open but looks new),
IQ (CRL, New unwrapped),
The Payoff (Atari, still shrink-wrapped, mint uncrushed)

The below are all complete, but opened
Astro-Droid,
War-Copter,
Day at the Races,
Starquake,
Sidewinder,
Zone X
Sunstar,
Maltese Chicken,
Battalion Commander,

If they are not worth selling, I will put back in the attic!
Cheers,
Paul

I didn't recognize any as collector items but in general I would say
~$20 per title for unopened. If there is something in there that is
collector worthy, I know an opened but complete Ultima III went for ~$85.

Paul it's hard to say what they are worth. If you want to get a
ballpark figure, then do a "completed auction" for each title most will
probably get you some results and you should get a good idea of their
value.

Hi,

I've had a keyboard reference page on my site for a while.

I have updated it with an XE cross reference near the bottom.

With the keyboard..take a qwerty layout, run lines vertically(two halves) and horizontally, and you get an 8 x 8 matrix, encoded into 6 bit. Add bits for shift and control, you get a byte for each regular key. Special keys decoded seperately.

So an "A" is 63, "P" is 10, etc. All keyboards do this in some fashion.

Internally, these codes get changed to atari version of ASCII. "A" is 65, "P" is 80. At least its mostly close. All computer manufacturers do some form of this too. Software changs this with a look up table.

For displaying on the screen, you normally fill memory with zeros. But that is the heart graphic character. So you have to rearrange the atascii into internal so zero becomes the space. So "A" is 33, "P" is 48. Rearranging the codes speeds up the display, little math and conversion.

I have some of this on my site
at...http://www.a8maestro.com/atari/info/kdbgrid.htm.
Atascii to internal is coming.

For some reason if I am in the emulator, I go back to the Atari keypresses
(shift-2 for quotes, control for the arrow keys). It's really weird...

"Paul Cawley" <paul.cawley@clara.co.uk>:

I think you'll find that at least these titles are worth about what you
would have paid for them back in the day, maybe twice or three times that
depending on the market (try eBay) and the title (Alternate Reality for
sure.)

>Zork 1 (Infocom, complete but not wrapped, sticker on front),
>Zork 3 (Infocom, still shrink-wrapped, mint uncrushed),
>Alternate Reality (US Gold, open but looks new),

At least those anyway... don't know much about the others. Like someone
else suggested, do a completed items search on eBay to get a rough value.

NTSC XEs had some bugs in the video circuit, for starters. I minor fix
involving the removeal / replacement of, IIRC, 4 resistors and the addition
of 2 caps. One thing you may want to play with before ripping out resistors
(and taking a chance on ruining the notoriously fragile traces on the XE
boards) is playing with the color pot on the board. Tweak it all the way in
both directions while it's connected to your display and powered up, and see
what you get. You might be surprised.

Does your TV support NTSC? Even via a SCART it needs to understand the
colour timings etc.

Hello All,

I have an overstock of Atari 800/XL/XE to SCART 1.5m (5.5 feet)
foil-screened cables to clear, so I am offering them to
comp.sys.atari.8bit readers at a much reduced cost.

Prices start at =A32.08 delivered per cable for the UK, and =A32.50
including Airmail delivery to Europe. Because SCART isn't really used
outside of the UK/Europe, the offer is only open to readers in the UK
and Europe.

Payments are in UK=A3 and by PayPal ONLY. Payment buttons are on the
order page, or you can PayPal the money directly to me if you prefer
(details on the order/info page).

This offer is only open to readers of this group, so you will need to
go straight to the order/info page at:

http://www.dgs.clara.net/scart-a8-oct06.htm

The offer closes on 20 October 2006 (or earlier if stocks are
exhausted).

Before anyone says it, yes I know people could make these cables
themselves. But at these prices why bother!

To find out more about us, and to see what else we sell, you can visit
our main site at: http://www.dgs.clara.net

I believe this refers to the "Super Video for the 130XE" article from
Atari Classics mag. I did this upgrade, and it did improve the
saturation/intensity, but overall, made the picture no better (IMO)
than other XE's that I have. (I still use this machine to this day.)
One down-side is that it made the faint vertical lines/bars on the
screen that can be seen on modern monitiors much more pronounced.
Based on my experience, this is a "fix" that fixes little. (The Super
Video for the XL is a different matter -- excellent results.)

If interested, you can check this out at
http://www.geocities.com/atarimods/

You'll get redirected, but I checked this link this AM.

FWIW, I have had lots of XE's, and I have never seen one that had
washed out color. Not saying yours does not on your equipment, but I'd
be skeptical that applying this fix would do much. OTOH, it's not hard
to do and is reversible.

I'm done updating my catalogs with NEW information! My software and books
catalogs are now 80 columns except for hardware which are still 38 columns.
I no longer have catalog named NEWINBOX.TXT... New items have been moved
into corresponding catalogs. For instance ST_SOFT.TXT Now has both USED &
NEW ST Software. New items are listed with a NIB by price. NIB=NEW in BOX!

FREE Catalogs for Used & New Classic Atari 8 Bit & ST Computer lines
plus Atari Jaguar Games and Consoles! View Catalogs on-line, Download
them or Feel free to Request catalogs by E-Mail. Really, it's not an
inconvenience. I ask that you specify 8 Bit, ST and/or Atari Jaguar! Or
all 3! Then I'll send them to you by E-Mail. Let me know if I can/cant
attach files to your E-Mail. Atari@aracnet.com or call (503)256-9974!

http://BensCatalogs.Atari.org FREE ATARI CATALOGS!
http://www.aracnet.com/~atari/specials.htm ATARI SALES DETAILS!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at

Is there a myspace type site that is a place for programmers to post
their apps for people to download? It would have to be user friendly
like tucows but allow a programmer to create their own home page where
they can post their apps (including open source if they wish). People
can network and link to each other, rate other's apps, and search for
code by platform/language/keyword/most popular, etc. It would support
EVERY platform imaginable, from 8-bit atari code to .NET and Java apps.
Does anything like this exist?

Yep, it's called sourceforge, but in that you have to have it open
source.

Sure there is - have you looked into Sourceforge? (www.sf.net)

Last I knew, Sourceforge was platform-independent, and it certainly doesn't
matter what kind of code/programs you post there.

Here it is ported to ACTION! I had to add a delay to make it sound
more like the BASIC version.

```
define delay="300"
```

```
byte audf1=53760,
     audc1=53761,
     audf2=53762,
     audc2=53763,
     audf3=53764,
     audctl=53768,
     skctl=53775,
     consol=53279

card x,d

;Press Option to end
while consol&4
do
  audf1=230
  audc1=175
  audf2=231
  audc2=175
  audf3=229
  skctl=3
  for d=0 to delay do od

  for x=0 to 25549 STEP 13
  do
    audctl=x/100
    for d=0 to delay do od
  od
od
SndRst()
```

Hi
I'm looking for a couple of the paper "XL/XE Library Update" leaflets that
accompanied issues of Page 6 / New Atari User magazine - specifically those
from issues 74 and 78. A copy, scan or whatever would be just fine.

If you can help, please reply via the contact form on the Page 6 website:
http://www.page6.org/contact/contact.htm

Many thanks,
Paul

Stick a 8bit core into a tiny fpga board, and you can have your laptop
pretty easy.

I'm pleased to announce the online availability of another magazine:
Computer Gaming World (CGW), from 1981-1992. This isn't platform
specific, but contains tons of Atari gaming coverage.

Highlights:

-102 issues saved as .PDF files
-Every issue processed through Optical Character Recognition (OCR),
enabling a 3+ million word global index
-Bookmarks and links for ease of navigation
-7438 pages covering 11 years of gaming

The CGW Archive is a CGW Museum product, published by Ziff Davis (who
own the right to the content). The issues are freely available on Ziff
Davis' FileFront website. Read the entire fake press release at the CGW
Museum site.

CGW Archive: http://cgw.filefront.com
CGW Museum: http://cgw.vintagegaming.org

Hello! you can find the disks for Excel here:

http://www.langesite.com/atari/Holmes/Holmes%203/Excel/

I have lot of Atari magazines,but have never found a copy Excel.

BTW- If you ever decide that you don't want the two magazines that you
have,
I will be glad to send you the postage to send them to me. (an Atari
packrat!)

I am interested in buying Smash Hits Volume 3, complete and Tarot Cards.
Anybody have these old games/programs?

Would like an ATR of Tarot Cards, if not possible to buy!

Thanks

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

Howdy folks

For all those who do not know:

Next saturday, the yearly meeting of the members (JHV) of the ABBUC will
be held from 10.00 untill 17:00 o'clock (that's 5 PM for you guys from
the opther side of the Atlantic).

It'll be held at the B�rgerhaus S�d in Herten, Germany.

All ABBUCmembers (and those who want to become a member) are welcome.

Don't let language be a barrier. Main language will be German, but many
do speak English, some speak Dutch.

There wil probably be some new hardware, even more old hardware and
probably some old hardware that's been either redesigned or build from
the old plans with new parts. The ABBUC Software and Hardware contests
will be held. And somebody has promised that we will have a lot of fun
with a multijoy interface, joysticks and footpedals (all at the same
time).

See you in Herten?

Mathy

PS diner will be afterwards, but pre-ordering it is appreciated/needed
(I'm not not sure). See www.abbuc.de

If I can get my hands on a pre-made one, I plan to cram it and a hard drive into the case of a borked XF551. Someone tried to do a 3.5" upgrade to it and totally destroyed about half the traces on the board. Whoever it was got a little overzealous desoldering the ribbon cable from the control board and REALLY screwed it up when he soldered on the pins for the removeable ribbon connector. I tried repairing traces on that board for over 6 hours, and in the end I gave up.

But, the power supply and case is good, so cram in a hard drive, the SIO2IDE, and probably spray paint the whole damned thing black and let 'er rip!

I just bought an untested BB and I do not know much about it. How should it react? It seems it should bring up a menu when pressing the leftmost push button, but nothing happens. I tried connecting my Adaptec adapter with the ST225 drive (works on MIO), but it does not try reading or anything. Is it broken? If so, anybody have clues on what might be wrong, where to get parts or where to send it for fixing.

I am also feeling stupid, thinking a Black Box would actually be a black box with the interface inside, but it's just a print board. Are they all like this?

Thanks and take Atarian care

Hi,
Try looking at this web site for information:
http://www.mathyvannisselroy.nl/blackbox.htm
one of the best information site's for the blackbox...

And of course the original site for the black box:

http://www.nleaudio.com/css/products/BB_Docs.htm

As a guess at your problems might be the power supply connection.. verify
pinouts and voltages..

Good Luck!!
RoyE

Thanks for the links. I think PSU is correct, the green light go on as do
the red one, when I boot computer. But pressing the setup menu button, does
nothing.

Will read through the pages tonight, after Liverpool match is done. Take
Atarian care

Guys,
Got my 8-Bit games from the loft and up on the 'bay right now.
Items are in the UK, and in Pounds Sterling (shipping will be slightly
higher to the US/abroad), but you will be hard pressed to find some of these
in this condition again.
Have a look through, lots of sealed titles, will be more of these in the
coming weeks, plus C64 stuff as well.

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZcawley1

Cheers,
Paul

Thanks!

> Thanks for the links. I think PSU is correct, the green light go on as do
> the red one, when I boot computer. But pressing the setup menu button, does
> nothing.

You can find the manual to the BB in the CSS site (link was in Roy's
posting).

There is another way to get into the menu. Look for "how to get to the
BlackBox's menu via software" at the bottom of my (resently cleaned up)
BlackBox page. BTW the switch IIRC is a switch that breaks the
connection when pressed.

Often, if the switch doesn't work or one of the lights (LEDs) doesn't
come up, is a back connection between computer and BB.

Greetings

Mathy

Hi Vidar-

If your PSU is good (+12, +5, -5 VDC IIRC), then check the ECI
connector and your XE connector to make sure they are scrupuously
clean. (Or your XL PBI connector if using the cable connector.) Any
"flakiness" of my BB has either been due to a bad PSU or poor
connections between my XE and the BB. If it still doesn't work, then
"untested" may mean "non-working." ;-) Good luck. -Larry

Thanks again!

I tried both my 130XE and 800XL, but none of these works. But, if like mentioned, the lights do go on, I guess the connection is okay. The green light is constantly on, when power is connected. The red light goes on when I boot computer, then stops when computer is ready. I'll try the software thingy to see if I get a connection at all. but guess it's a non-working BB. Does Bob stilll repair them?

Take Atarian care

I'm done updating my catalogs with NEW information! My software and books catalogs are now 80 columns except for hardware which are still 38 columns. I no longer have catalog named NEWINBOX.TXT... New items have been moved into corresponding catalogs. For instance ST_SOFT.TXT Now has both USED & NEW ST Software. New items are listed with a NIB by price. NIB=NEW in BOX!

FREE Catalogs for Used & New Classic Atari 8 Bit & ST Computer lines plus Atari Jaguar Games and Consoles! View Catalogs on-line, Download them or Feel free to Request catalogs by E-Mail. Really, it's not an inconvenience. I ask that you specify 8 Bit, ST and/or Atari Jaguar! Or all 3! Then I'll send them to you by E-Mail. Let me know if I can/cant attach files to your E-Mail. Atari@aracnet.com or call (503)256-9974!

(Says green light stays on, red light on at boot.)
That seems like the BB is working. There may
be a software access. I'm familiar only with the
MIO. You access MIO menu by holding SELECT
and pressing RESET. Have you tried the console
keys and RESET?

Yes, I've tried that, I too use a MIO. First thing I tried. But it says in
manual that the leftmost push button brings up the menu. It does not do
anything. I'll try the software setup later. Thanks for suggestions!

Take Atarian care

Listen Pal. I NEVER sell a item that I cannot verify works. Why in the world would anyone screw someone like that. I opened it up tried out every item so no one buys it and gets a suprise thats its not working. By you thought, every tv you buy at the store is used because they had to turn it on to make sure it works, and every car they make is used because they had to drive it to the carrier to load it up. Come on man. WTF

Going through life trying to find the flaws in everything, as in my choice
of words to describe my products was a huge waste of time, and brain power.
If you wanted to be smart, you could have just started asking question about
what I was selling. Instead you started picking apart what I said. To me
this is a horible use to time and brain power.

To all. Well I have sold the 2 indust drives, to someone already. I have
also sold the older Sc1124 monitor, and the mono monitor. Also the Atr8000.
I still have the used 1040, 520, and the NEW YES NEW color monitor that what
seems to be a messed up power connector. If no one wants it I am going to
just fix it myself, and use it.

Nah, I guess after reading so many Ebay horror stories, I'm a little
cynical. :p

Looks like we both did our homework on the 6502 processor. ;-) :-D

Like I said to Ron Hall, I don't know you and your post was not very clear.
As for your question, I don't know why people would screw other people over

like that -- I just know that they do. I apologize for thinking that you may have been one of those people.

And I don't mean to nitpick, but you're getting a little bit carried away with your analogies. Firstly, you're comparing your post in a newsgroup to that of a legitimate business with a storefront. I think you're smart enough to understand the difference between doing business with a stranger on the Internet, and doing business with a reputable automobile manufacturer or retailer in your hometown.

I'm not saying that you're not a reputable business or person, I'm just saying that I'm not aware of your reputation. And, that's really the whole point.

I agree, this is a waste of time and brain power. And it wasn't your choice of words that I was questioning. It was your lack of words. To be more precise, your incomplete descriptions of what you were selling.

Like I said previously, if I were Ron Hall, and I knew you as a fellow BBS operator, and I knew that you had picked up these items from a former Atari dealer, then I wouldn't have questioned you at all. I'm sure you're reasonable enough to understand this. I don't believe you're a stupid man.

Hi ziggy!

I still enjoy a game on MAME. Games I have played as a child.

z80only :). There are some 68k arcade, but I like the Z80 arcade at
most. It's the best game play.
256 steps are sometimes more exact than 65536 ;). Today TFT-viewer say
the same about... less is more :-)))

Kind Regards,

Daniel Mandic

LP has been, and continues to be, one of the most significant contributors
to the Atari community. Especially on the ST side (MINT and GFA Basic).
Perhaps you should check out his website sometime?

Oh, BTW, for some reason, I can't remember...what is it that you've done
for the Atari community? Thanks... :)

Do car dealers, TV dealers, computer sales people do that? Do they have
to? Isn't it understood that somewhere along the line, even a brand
spankin new, from the factory item, has been used at least once? How many
actually say, "This machine has only been used for testing"? I don't
believe I've personally ever seen that on anything I've bought.

C'mon Albaclause, you're defending a really bad position here.

>

Not that I feel I have any obligation to the Atari community, but I've done
very little for the Atari community of late.   You know, things like life
get in the way.   But, I did run a chat server for a while a year or so
ago. I created the disk based catalog for a Public Domain software vendor
at one time.   I was working on a public domain software archive for the
Atari 8-bit community.   Oh, and of course, I contribute to this newsgroup
from time to time... I answered some of your queries regarding your ST and
UDS-10, I answered another person's query about his non-working Atari 800,
and so on and so forth.

Granted, I haven't been unloading a bunch of Atari merchandise to my fellow
Atarians.   But I believe you asked about contributions -- not
profiteering. :-)

I was going to stay out of this, and I intend this to be my only post on the subject, but I just wanted to make sure it is well known that Chuck is doing anything BUT profiteering on this stuff. That might not even be what you were implying, in which case you should feel free to disregard the rest of this post.

As one of the people fortunate enough to have made a deal with Chuck since the initial post of this thread (that's what I did while the flame war ignited), I can assure you it has thus far been one of the better dealings I have had in obtaining equipment - and that's saying a lot given the number of great people I have deal with around here. We spoke on the phone, I was sent a plethora of photos, the stuff is in great shape, and the savings have been passed on to the people who can use the hardware.

Not to brew up the flames any further, but as long as I'm here... :) In my opinion, the initial post is actually exactly what I like to see. To me, "new and working" always implies that the stuff in question hasn't been fired up except for testing in order to avoid making someone a bad deal. Of course, Ron's endorsement didn't hurt in convincing me that I should get dibs on the items I was interested in.

I was SO careful too! First person to spot the Engrish in the above
paragraph wins a prize.

Not that I really want to continue on this subject, but I agree with you

that "new and working" is much better than "NEW NEVER USED". And who could blame you for giving credit to Ron Hall's endorsement? After all, Ron is a known quantity in these parts. Do ya see what I'm saying?

I think I read them with the same meaning, which is probably why I
misquoted it. At any rate, your other reply is enough to end my
contribution on the topic. BS is a subject I'll stay out of entirely.

Chuck B wrote:

> Someone is crabby!! and has a horrible life

Yeah, I do have my crabby days. But they're justified in my opinion.

I don't really want to stray too far off topic, but my life has been really horrible for the last several years. Mostly because my life hasn't been "my life". Apparently there's this piece of garbage that thinks he/she owns my life. Hence my signature.

This has to end immediately. I am not interested in anything that I don't pursue on my own. I have my own mind, my own interests, my own style, and my own objectives. If none of these are consistent with what he/she expects of me -- too f'ing bad. I'm not in the approval business. I seek no ones approval and I really don't care what people think of me or how many people I have to hurt in order to get what I'm after. And make no mistake, what I'm after in no way resembles the female form. I personally despise females and I will make absolutely no apologies for this. And you can feel absolutely free to disseminate this message -- cuz the more women that know of my disdain for them, the better. I will be a much happier camper when I am secure in the knowledge that I will never have to be burdened with the company of a woman. :-p

I apologize for the rant. This is not directed at you Chuck, and please don't feel that it is. For the people that it is directed at, however... I'm ready to destroy you. And it's been a long time coming... and you can be damn sure that you totally deserve it. kiss my mo'f'ing ass!

As for answering queries, I think most of us do that on a routine basis.

(not slighting your efforts here). I thank you for what you have done,
besides that, as well.

Not profiteering. You're making (bad) assumptions again. He got this stuff
from a former Atari dealer at a low price, and is passing that on to the
people he's selling to.

Sounds like a pretty noble endeavor to me...

Incidently, these figures look somewhat suspect to me -- for instance,
look at the Atari figures that show that ZERO 400/800 units were sold
from 1986 on. I would guess that the XL/XE machines were lumped in
with the ST's from 86 on. I've read sooo many different *published*
estimates of how many machines were sold of various types.

Incidently, the text article (link) that is embedded in the stats. page
is quite interesting, also.

Good news! I was able to raise some help at MIT, and they were able to
kick the FAQ-Server back into responding to email updates.

Next scheduled postings of both my FAQ and Vendors list are guaranteed to
be updated!

I remember that. It's not an Atari 800, it's an Atari XEGS.   It's
pretty cool with the fake woodgrain and all.

Ben Heckendorn finished that project last year. He has a very nice
article showing how it was done on his website,
http://www.benheck.com/.

I see Ben's been at it again. This time turning an Xbox 360 into a
laptop.

Ben has been most well known for turning game consoles into handhelds.

I've actually seen/held/used that machine. It is now owned by our very own
Docrotcod, were it not for the fact that he leaft us earlier this month. :(

did Atari ever have plans to make a portable 8bit? I know there was a
prototype C64 portable.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

RELATED NEWSGROUPS:

I went to their warehouse sale when they unloaded most of the junk still
sitting around in the labs and I never saw anything that went that way.
Most of the stuff was 1450XL kind of bigger and better except for one
prototype called "Patty" IIRC that looked like the precursor to the 600XL.

Atari was slaved to the silicon. They would have needed to convert all
those custom chips to CMOS and they lacked the will at the time.

Atari Corp. showed the 65XEP at the January 1985 CES in Las Vegas, as part
of their initial introductions of both the XE and ST series of computers.

Okay now I rem.   Did any ever make into the wild?   A portable 8bit
would of been cool. If they had been able to follow thru with the
Flashback 3 we would of got a enchanced 8bit on one chip and someone
would of made a laptop out of it.

It's my favourite. Normally I do not numbering my favourites.... but
M.U.L.E is an exception. -First Place (so far)

I thought I know much about but/and I still explore new programming
skills, yet, programmed into this all time Favourite. But it is so
small in KB :)

Long live the 400/800 and their developers!

Best Regards,

Daniel Mandic

I would have to disagree.

Atari was biggest around and just before 1982. Then a recession hit, and hit kinda hard. I was very young then and didn't know what that was about however, I just remember one important detail about the whole thing..... there was no place to buy Atari products. Believe me, I would have if I could find a place, but one after the other, all the places just shut down.

A good saying once was, "buck the recession". In other words, you spend money. But the argument also goes, not only do you need money to spend, but just as importantly, you need a place to spend it.

Atari made a few really nasty mistakes.....

1. Ray Dumbass, CEO at the time, fired almost the entire engineer staff all at once, calling them a bunch of prima donnas. So some of them decided to start Activision, one of their biggest competitors. A move that hurt Atari but was also very well deserved. Activision became a very good company with very good games at lower prices. They also knew how to treat their engineers.
2. Some idiot in Atari decided to move their factory overseas, all at once, without testing the idea, just before Christmas sales. It was delayed, Atari fell hard.
3. There were an AWFUL lot of very good programmers that were MORE than willing to program some wonderful programs for just a little royalty. I think that some VERY VERY good talent could have been tapped for some VERY VERY good programs and games with a little pro-marketing, even in the 1982 recession. Perhaps if Atari had partnered with ANTIC and put out a good software catalog, with reviews and information, opening a little door for people to not only buy but also to sell their programs.

And, #4. I was very disappointed when Atari quit supporting their machines. At the time, mine was an Atari 800 and a little later an XL. They just dropped it all together and the only support were Atari Computer Clubs and the such like. IBM Compatible machines stayed around because they were always backward compatible (to a point) and thus it lived on. All I know is that I didn't want to purchase another machine that would end up 'unsupported'. Even if only my idea #3 had been implemented, it would have

still been a form of support.

Hi Samsung!

And this is all still hanging on to you? Can you not forgive the
happenings, actually closed, payed and forgotten.

They (ATARI) would not like to have it the other way.

Your computer would be no computer. Foreseeing all is not possible.

Now let's go to past perfect tense and forget about all tis stuf. I am
still amazed about the amerikan movies of the later seventies, how big
their towns, how big the cars and how small some livingrooms (slums!?),
and how this can work economically. But the music, often used in such
films, is outstanding (Calahan, Dirty Harry -for example)

Best Regards,

Daniel Mandic

It worked! Pretty easy too. I just popped the MAX233 chip out of one
of my SIO2PC cables and made a couple of quick jumpers to let send and
receive pass straight thru.

Perhaps later I'll rig some switches but for now this will work.

The jumpers inside the ATR8000 aren't exactly convenient but I don't
think I'lll be changing modes very often.

Antique Comptuer Swapmeet - Wilm, DEL October 7th 2006
Pass it on!

Midatlantic Retro Computing Hobbyists Present:

The Wilmington Classic Computing Show and SwapMeet
DATE: October 7
WHERE:
504 N. Market Street
2nd floor / Copeland Room
Wilmington, Delaware 19801

LOAD IN: 8AM
EVENT STARTS: 10AM
AUCTION: 2:30PM
EVENT ENDS: 4PM

PUBLIC ADMISSION: $5.00 ($7.00 per family)
RESERVED BOOTH: $15 ($10 MARCH members)

2800 square feet of hard-to-find "classic" computers (pre-internet age), gaming, test equipment, parts and supplies, software, and more for sale, swap, and auction.

Sell or trade your pre-1990 computers!

Supports non-profit group dedicated to the preservation of historical computers.

More Info:

While everything you said is more accurate then debatable, it would not have made a difference.

You only have to look at a list of what computers were available and who was in the business. I can think of literally a dozen brands like Coleco, Eagle, Ti 99/4, Timex, etcetera. There were even odd ball ones like Bluebird.

As was said in the movie Meatballs "It doesn't really matter."

Not all those computer manufacturers had Ray Kassar as the CEO.

Truth be said, it didn't really matter. Everyone went down to the MS/IBM juggernaut.

It's a lesson in market demographics. IBM got into the work place => educated, employeed, intelligent, well paid. Once they got that demographic the children of them logically followed for games. Apple had a good idea getting into the educational market figuring they would buy Apple when they grew up or nag their parents into buying Apple, but it ended up not being the winning strategy.

What was left after that all the other players? The what they had established previously, the uneducated, the unemployeed, dull, broke. Hard to survive in that type of market.

IBM didn't win. It was the clones that won. The modular,
updatable design with dozens of manufacturers for portions
of the clone, hard drives, modems, monitors, keyboards,
floppy drives, BIOSes. The IBM clone was considered
'as good as' an IBM (100% compatible was the point).
Oh, and parallel centronics printers. All the other computers
tried to monopolize on peripherals, the DEC rainbow even
tried to prevent 'standard' floppies, you weren't supposed
to be able to format a floppy. The IBM Jr. was a disaster.
The IBM compatible clone was the cheapest way to do

computing, and MS made there DOS freely copyable.
MS made most of their money from clone manufacturers.
Even today, the PC is cheaper than a MAC. And MS
did a great job of keeping the DOS/OS compatible so
you didn't have to buy new software every time you got
a new computer. Even today, or maybe recently, MS Office
was freely copyable.

Video monitors for your classic game system.
Commodore 1701
Commodore 1702
Both in excellent condition.
Used rarely with a VCR as a super-resolution TV...
So there are no screen burns from continued game use.
No box or cables, but way cheaper than dealer price.
Pick up only in Tigard, Oregon. CANNOT ship.

Have one each. When they're gone you'll be back to
paying dealer prices.
$50 each.
Thanks, mike
return address is valid

Not the best 8bit game but the one you still play and enjoy, your

favorite.

Mine is Donkey Kong, this is the best port ever and I prefer it's
random no matter how good you are you can still die in early stages if
the monkey throws a certain pattern of barrels gameplay to even the
arcade version.

Kevin

Hi folks,

a new release of the Unix/Win32 atari emulator is available for download
at

http://www.math.tu-berlin.de/~thor/atari++/

Credits for this release go to:

- Sebastian Pachuta (again!) for pointing me at some bugs in the player
  missile timing logic. It is still not perfect, but much closer than
  before.

- Bennet (beipdev@yahoo.com) for providing me with very detailed
information about the antic DMA timing that got incoprorated into the
1.50 release.

What's new this time: Aparently a lot, thus a new tenth digit in the
release counting:

Atari++ 1.50
    - This release is mainly a bug-fix release that addresses
      a couple of issues especially on 64 bit systems:
    - Fixed various erraneous varargs usages, mainly active during
      error handling, that caused crashes on AMD64 systems.

- Fixed reference to the linux joystick device. Newer kernels
  place this device at /dev/input/jsx instead of /dev/jsx,fixed.
- The H: device handler wildcard matcher now also finds files
  whose extender consists of blanks.
- The joystick handler contains now a workaround against
  some faulty implementations of the emu10k1 (SoundBlaster)
  gameport interface and got basically self-calibrating by
  using the second unused joystick axis.
- The DMA timing got reworked heavily. Thanks for that goes to
  Bennet (beipdev@yahoo.com) for providing me with more detailed
  information.
- The way how horizontal timing is organized changed
  heavily, and the timing constants for ANTIC and GTIA changed.
  Thus, new items in the menu will adjust the timing, and
  old ones got removed.
- The player/missile generator changed a bit and is now aware of
  some internal GTIA reaction times. Thanks for providing
      examples
for this goes to Sebastian Pachuta (thanks again!)
- Some heavy bugs got fixed in the X11 interface that could have
  caused conflicts with at least some window managers because it
  re-opened windows to fast. These problems are now avoided by

using a more careful logic.
- An out-of-bounds memory write in the mathpack emulation got
      fixed.
- Error handling in the complete menu and error requesters
  itself got improved.
- Errors from the X11 subsystem are now captured and reported in
  a more user-friendly way.
- The complete user menu creates now string-gadgets for numeric
  values whose numeric range is too large to be fine-tunable by
  a slider alone.
- Improved the speed of the X11 true-color output by enlarging
  the output/color buffer.

And, hopefully, the file server of the TU will make it for a couple of
days, this time... (-;

So long,
    Thomas

I'm interested in getting me an SIO2IDE interface, but I am unable to email
the creator/owner of this site: http://atariarea.histeria.pl/sio2ide/

to ask about one. I don't know if the address is valid or not, but my ISP
rejects the email address marek_mikolajewski@NOSPAM.wp.pl (minus the
"NOSPAM", of course).
Does anyone here know of another source for an sio2ide?

Thanks,
David Bowden

So far, about the only thing I have found that works is SD 3.2G, but it
doesn't work with MyIDE... :(

Is/are there any driver(s) out there for 3.3a, or a patched version, maybe?

Thanks,
David Bowden

Check out this thread at ATARIMAX. HiassofT has written a patch to the
MyIDE OS that automatically detects high speed devices and uses the
appropriate driver. It should work with 3.3a.

The first game I was really hooked on was probably Asteroids for the 2600,
but I must say, Star Raiders on the Atari 8-bit is solid gold. And Rescue on
Fractalus, Ballblazer, Bounty Bob Strikes Back rocks too!

I explored some games with 8080 chip... hmmm, the 6502 can be find up
to 1982. I know, it is programmed and merchandised longer, but the 8080
vanished in that time more and more, with over 2MHz. The 6502 Games in
82', for example, still had KHz, or two 6502, both under MHz.
Vanguard for example....

By the way, what and who is 8080?

> I still do think the C64 outsold any other 8 bit machine here in the
> US. bunches and bunches were sold.. i heard something like 10
> million?

Maybe.... the best sold HC, if you look from the merchandise-side.

And country !?, because I think Japan never had the c64 in big aomounts.
They had floppy-mode 3 at that time and other systems I never saw, but
knowing them now (information, and from emulators) as intelligent
systems, IMHO.

Z80 driven machines (e.g. arcade and some higher tacted Z80 PC's), I
saw up to the late nineties and today. 'Cannon Ball' (Sung/Soft Vision)
for
example 1995. Some of the arcade Z80 were combined with a 68000 or
68EC020...

Best regards,

Daniel Mandic

I'd have to say M.U.L.E. I've played that more than any other computer
game. A close second would be the Ultima series.

My favorite non-8-bit game would be DOOM.

My first place ATARI VCS Game is Superman and Berzerk (I have coloured
paintings on the TV-tube, for additional walls, and in some other
games, like 'Tank', too.) I haven't with Superman, but my brothers
record of 56, or so, is unbreakable by me. Also Tic Tac Toe, he could
beat any grade of difficult (1....9 !?).

My favourite non-8bit (let's say Atari ST 32bit/16bit), is (hehe...:))
'Fate Gates of Dawn'. REline Software.

Kind Regards,

Daniel Mandic

Hi David,

I don't have an immediate answer.

I recall from some chat sessions that Beetle at
www.Atariage.com/forums/ has a friend, mega-hz, who has or makes (not
sure which) the PCBs and can assemble complete units of SIO2IDE. I
don't know if kits are available. Mega-hz only has the older 3.x model
of SIO2IDE, the model without the USB connector.

Beetle and mega-hz can also be contacted at www.abbuc.de forums. The
site is German/English but the forum posts are mostly in German.

mega-hz has website but last time I looked there were no references to
SIO2IDE.

http://mega-hz.no-ip.com/

Yeah, the Ultima series rocks! First RPG I ever played was Exodus on my
800XL. Man, what great memories. :)

> Vanguard for example....

Um, maybe I'm just confused by the way you worded that, but Commodore's 6502
ran at a flat 1Mhz, and the Atari was a blazing 1.79 Mhz, starting at day
one, from the 800 all the way through the XEGS, some 13 years later.

>
> By the way, what and who is 8080?

The 8080 CPU? That was Intel, and it was the "successor" of the 8008, the
great great great GREAT (probably could throw in a few more greats just for
the hell of it...) grandfather of the modern line of Intel CPUs.

I meant the 6502 does much more than a 8080, and that with lower
frequency!

Yes, nearly a MHz for the C64. But also good performance compared to
the freq.

(Why 6502 and C64? Is it not the 6510?)

Ahhh... The Eight wandered one step to the left.

Interesting... Thanks!

Best regards,

Daniel Mandic

Guys,
Anyone know where I can get hold of a NOS replacement keyboard (or just the keys) for a 130XE, to replace a badly yellowed keyboard on the one I have here?
Cheers,
Paul

In no particular order, and with some slight of hand by combining more than one into a single line, my top ten are:

1. Jumpman & Jumpman Jr.
2. Blue Max
3. Boulderdash 1 & 2

 4. Archon
 5. Beachhead 2
 6. Ultima 1 - 4
 7. Drelbs
 8. Alternate Reality (the Dungeon)
 9. Great American Road Race
10. Star Raiders 2

There are many more of course, but these are near the top.

Demivec

I'm done updating my catalogs with NEW information! My software and books
catalogs are now 80 columns except for hardware which are still 38 columns.
I no longer have catalog named NEWINBOX.TXT... New items have been moved
into corresponding catalogs. For instance ST_SOFT.TXT Now has both USED &
NEW ST Software. New items are listed with a NIB by price. NIB=NEW in BOX!

FREE Catalogs for Used & New Classic Atari 8 Bit & ST Computer lines
plus Atari Jaguar Games and Consoles! View Catalogs on-line, Download
them or Feel free to Request catalogs by E-Mail. Really, it's not an
inconvenience. I ask that you specify 8 Bit, ST and/or Atari Jaguar! Or

all 3! Then I'll send them to you by E-Mail. Let me know if I can/cant attach files to your E-Mail. Atari@aracnet.com or call (503)256-9974!

http://BensCatalogs.Atari.org FREE ATARI CATALOGS!
http://www.aracnet.com/~atari/specials.htm ATARI SALES DETAILS!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

From: Sellam Ismail <sellam(at)vintagetech.com>

In case you've been too busy to notice, VCF 9.0 is only a month away!
The ninth annual Vintage Computer Festival happens on November 4-5 at
the Computer History Museum in Mountain View, California.

[snip]

This year's event is going to be especially keen, with an already
excellent line-up of speakers (and still more being added) and the
inauguration of two new features: our Build-It-Yourself Workshops and the
Vintage Computer Film Festival, featuring documentaries and films covering
vintage computing and technology themes. And there's so much more!

With our 30th year anniversary celebration of Apple Computer featuring
Woz along with a bevy of early Apple employees and founders, a reprise
of the Sol-20 reunion at the first VCF with Lee Felsenstein and the
prototype Sol-20, and our new Vintage Computer Film Festival, we're
expecting a rather large turnout with plenty of media attention to
boot.

[snip]

We've dropped the registration fee for exhibitors, yet as an exhibitor
you're still entitled to full access to the VCF, because exhibitors
are VCF VIPs. So mark your calendar, dust off your favorite old
computer, and get ready for a nerdily fun weekend!

Go here to register:

     http://www.vintage.org/2006/main/exhibit.php

[snip]

Best regards,

Sellam Ismail
Producer
Vintage Computer Festival

Here are the one I regulary play

-Mule
-Archon (I and II)
-Kennedy Approach

Just for the little story, I've discovered computer when I (well..my
parents !) bought my very first computer, an Atari800XL. I bought with
it a package game. I don't remember the title but it was an olympic game
for one (I found an ATR file of this game and title is "track and field"
but I'm not sure it was this title used when I got it in France in
1988). Well, I played this game hours and hours !

Now I live in Mexico and my atari stayed in France but thanks to
Atari800win Plus, I still enjoy my 8 bit.

Could it be LA Olympic Games 83 or something like that? Almost same game I
think.

Sorry for the late notice - someone else was supposed to announce this. :)
Anyway, a group of us will be chatting tonight starting around 9:00PM EST
via IRC on server irc.openirc.net and channel #atari. Hope to see some of
you there.

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be listed.

Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:

comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate binaries groups instead.

FamilyNet International Newsgate

You've requested it, you've begged, and so someone opened a IRC channel, and
some of us last Tuesday during the chat tried out the IRC Atari channel.

   And we will be there again tonight!!

   The location is IRC= irc.openirc.net/#atari

   Will be starting at 8 pm CST and going till... whenever!!

   See you there!!

   "But how can I get there with an Atari computer?"

   I'm glad you asked. :)

telnet to...
telnet.familynet-international.net once there...
"chat" & "G"
then ...
/ircjoin irc.openirc.net
then /j %#atari

Been on numerous times with the Atari 800. ;)

Good turnout last night, including a new face or two. Besides any
scheduled IRC chats, at least a couple of us tend to be (sometimes idle) in
the channel, so feel free to drop in any time. :)

Hi everybody,
I am planning to give my 130XE an new home in an obsolete
desktop case. Because of ergonomic and stability reasons
I would like to use an XL keyboard. I know the pinouts of
XE and XL keyboards are different. Is there any information
about these differences available on the web or on one of
your hard drives ;-) ?

Thanks in advance.
Oliver

Top of my list is _Star Raiders_. I almost wore out the electrons in my
Atari 5200 with that one. :)

Others in my Top 10 list include:

Starmaster by Acitvision for the 2600.
Breakout for the 2600
Video Pinball for the 2600.
The Dreadnaught Factor for the 5200 by Activision

Thank you very much for sharing this information. At this year's
CommVEx v2, I saw a prototype USB cartridge for the Commodore (shhh!).
I will forward this message to the appropriate developer(s).

I've got a Happy 1050 with Happy Rev 2 ROM and as such the Happy Software "Set to US Emu" option "only enables fast writing" rather than full US Doubler emulation. Any ideas where I could get the "Happy Doubler" program (description as follows)???:

"Happy Doubler - Allows you to program your Happy 1050 drives to fully emulate ICD's U.S. Doubler, including formatting disks in the U.S. sector skew (which is not normally possible!). Also allows you to re-program your drive numbers up to D8:, without touching the switches in back! This way, up to 8 - Happy 1050s can be used at once! (4 - programmed as Doublers 5-8 and another 4 - as normal). Completely software based, no installation required!".

Wasn't 'Track and Field' that game that you went crazy with the joystick?
You moved your stick back and forth in real time to make the man run and
pushed the fire button to jump. I could only last about one event before
my hand gave out.

Many thanks Ed, but the "Happy Doubler" program does not appear to be in the Holmes utilities archive - unless I am missing something.... If it helps anyone, the program was by Innovative Concepts and retailed at $19.99 and was released in 1989. See: http://www.atariarchives.org/cfn/05/11/0160.php.

Back when I was bout 17 or so (1983) i figured out this little 5 or 6
byte ML program that would take the values from the timers (18,19,20 I
believe) and them poke them into the sound registers, then loop back to
do it again. To stop it you would have to reset the system. It played a
pretty neat ditty if I remember correctly with a beat and everything. I
used to enter the program in on any Atari I could find setup at a store
and then walk away.

I would love to hear this again, but my 6502 m/l knowledge and Atari
memory map is totally gone (buried under usless Windows information).
Anyone think they could recreate it?

I use to just poke it into memory from the READY prompt (I think I used
page 6, but I may have used zero page).

Sure was a joystick wriggler, which is why I didn't like the Wico stick,
long and not fast enough. I set some records back in the old days, but
nowadays, I don't know. Track and Field was also released with a special
controller, three buttons to smash wildly. Cool stuff

Take Atarian care

Well it seems as of 6 pm CST on 10/09/06 irc.openirc.net is either not
working or I can't get back on it. Anyone have any other suggestions?

Well I remember getting a msg saying it would be down for 30 minutes...
that was at 5 pm... and it said to go to irc.catch22.org (6667) did
that...and no one is there. So I am pretty much at a loss. I looked
up OpenIRC on the net and it seems it does this quite often. So with
that said, there are other servers that are affiliated with this one,
but doesn't default over to openirc.org. It goes to a different server
altogether. So, I am not exactly sure what to do :(

Based on this, we've opened a room on newnet - irc.newnet.net, channel
#atari. I'm told by someone affiliated that we can depend a bit more on
it.

See you there!

As I remember,to set the drive number to 5-8 was in firmware in the
rom.
  Once set,you could not use the drive as 1-4.

Anyway,this is all that I know.Sorry I was not more help.

You might want to contact Steve Carden at:

http://www.atarimax.com/

That is where I bought my Happy enhancement. A GREAT Atarian!

I had been looking for that program for several years when the author
sent a post about some other things he had written. IIRC, he indicated
that he had lost it, so unless someone pulls the rabbit out of the hat,
it is unfortunately g-o-n-e.

As I recall, the main purpose of the program was to be able to format a
disk with the doubler interleave. The Happy should easily be able to
reporduce that format, although using the Happy Backup to reproduce a
"raw" formatted Doubler disk would be a pita. I also seem to remember
that there is a BASIC program that can use the Happy control codes to
produce this format. Look for the "Happy Utilities".

Oliver,

I have not come across anything like that on the web, yet if you come
across some info, please post the link when you find it.

Rory

I had always assumed the terminal attached to the rs232 port as well. But, then you couldn't use a modem. As yuo made me realise, the terminal has to attach to the sio connector This isn't hard to figure out. With pinouts of sio and de9, its a matter of making a null modem cable probably. This is how you can hook up an atari with an 850 to 4 atr8000s. If there is enough interest, I can wire up a cable, change the jumper and see what happens.

As I see the circuit has been traced. The jumpers make the null modeming,
People have pu in a front panel switch for the terminal setting and the
reset button on back.

I think I got approval to put the schematics on my site. Mine are tif, but
I think I'll change to gif.

I am writing some assembler code and have a question. I am writing my
own DLI, and I am leaving some space for a screen in Antic Mode 7,
Basic Gr. 2, which is a 20x12 screen. All the docs I can find state
that this takes a 420 byte block of ram. How is that, since 20x12 is
240. When I store a char in the memory, I can fill the screen using the
240 bytes. Where are the other 180? I am blocking out 420 bytes to be

sure, but am curious as to where 241-420 go.

Also, it looks like it's much easier to manage your own screen real
estate, and much faster, than going through the CIO routines.
Unfortunately, there doesn't seem to be much documentation on going
about this. I am just loading the accumulator with the char I want, and
dropping it in the appropriate byte to make it appear on the screen. Am
I on track here?

Thanks in advance,
Isaac

I believe you're talking about DLI maker, Greg Anderson,
Issue 38, page 19.
I believe somebody 'messed' with the program as printed
in the magazine, thinking they were following good practice
instead of saying X=0, they put in X=Z0 or X=N0, but they
didn't init N0 so the program crashed.
So, I believe you have to put N0=0 , init N0 at the beginning
of the program.
However, I don't think John wants to get into DLIs, but stay
fairly straightforward, in which case, the answer is yes, GR0
uses a single color for background and the letters, just
a different brightness. If you can use big letters, then GR1
and I think GR2 allows four colors for letters. You have
to SETCOLOR and COLOR to set the colors, and then
PRINT #6;"STRING";A$, instead of simple
PRINT "STRING";A$.
Something like that.

Hi Bill!

In terms of CPU, is the Z80 surely the leader ;-)

Otherwise, I would guess the Nintendo System was the best selling. :-|

Kind Regards,

Daniel Mandic

Don't worry Rick! Geezer was talking about shunting (I say shunting
not shorting which always has a bad connotation to me) pins 3 and 5 of
the 6-pin jumper block J7.

One shunt reroutes SIO pin 5 to one input of the 1489 and another Pin 3
to one output of a 1488, if I understood Geezer correctly. Circuits
are definitely not my strong point.

I'll send you the schematics. That would probably be easier for you
(and me).

I am a bit confused here. You cannot get any colors on Gr.0 screens, only
change background color and change grayscale intensity. I know these can be
different for each scanline, but I did not think you could get colors on the
text at all Am I totally forgetting or am I right? Getting too old I guess!

Take Atarian care

The Commodore 64 is the best selling computer from that era by far.
Atari officially dropped support of the 8bits on January 1, 1992 I dont
think Atari cracked a million 8bit sold but I dont know for sure. The
Apple II series ended in 1993 so it technically lasted longer then the
Atari at the end of it's production 2 million Apple II series computers
had been manufactured. Compare these figures with the Commodore 64
which ended prod in 94 and sold in excess of 17 million!!!

Still I'll take a 130xe anyday, but Im biased.

I believe you're right, vidar. For GRAPHICS 0, you get essentially
white or black letters on 16 colors of background.
You're not going to get yellow, then green then red letters, like in ANSI
or, maybe HTML. I don't think that is possible even with
DLIs. There is some possible change of color on a single line
of text, using special timing, but that is pretty advanced.
I remember Moriarty's 'Crash Dive' in about ANALOG 18.
it had two colors background on a single line where you typed
in your instructions. I'm not sure how he did that.

It was the keyboard.

I ended up buying a couple of old 800s from a guy for parts and swapped
in the keyboard from one of them. That solved it. Everything is fine
now. Plus the purchase included 300-400 old Atari game diskettes. I can

see my old case of Atari thumb coming back at age 58! Thanks for
everyone's suggestions.
